EXLAR®

*Integrated
Electric Actuation
Solutions*

Global Leader in Actuator Technology

Your Actuator Solution Source

The Exlar® product offerings cover a wide range of performance specifications and capabilities. Please view the chart below as a thumbnail guide to assist you in choosing the best product for your application. Three product families shown in the table below are not included in this catalog, but are offered in separate brochures as offered below. You may also visit www.exlar.com to download the brochures and view complete specifications.

Linear Actuators	Series	Standard Environmental Rating	Integrated Control Electronics	Integrated Brushless Motor	Nominal Frame Sizes in (mm)	Max Stroke Length in (mm)	Max Cont. Force lbf (kN)	Max Velocity in/sec (mm/sec)	Explosion Proof (CID1)	Non- Incendive (CID2)

Roller Screw Technology

The Advantages of Roller Screw Technology

Designers have five basic choices when it comes to achieving controlled linear motion. The table on page 3 gives you a quick overview of the general advantages that are associated with each. Because the roller screw technology common to all Exlar linear actuators might not be familiar to everyone using this catalog, allow us to present a general overview.

The difference is in the way the roller screw is designed to transmit forces. Multiple threaded helical rollers are assembled in a planetary arrangement around a threaded shaft (shown below) which converts the motor's rotary motion into linear movement of the shaft or nut.

Roller Screw Basics

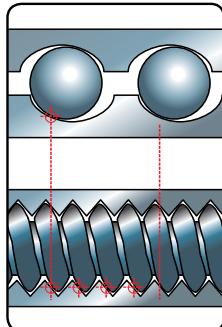

A roller screw is a mechanism for converting rotary torque into linear motion in a similar manner to acme screws or ball screws. Unlike those devices, roller screws can carry heavy loads for thousands of hours in the most arduous conditions. This makes roller screws the ideal choice for demanding, continuous-duty applications.

Exlar Roller Screws vs Hydraulics & Pneumatics

In applications where high loads are anticipated or faster cycling is desired, Exlar's roller screw actuators provide an attractive alternative to the hydraulic or pneumatic options. With their vastly simplified controls, electro-mechanical units using roller screws have major advantages.

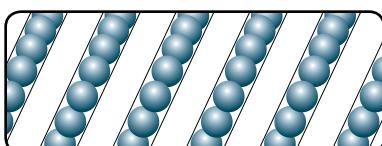

- Eliminates the need for a complex support system of valves, pumps, filters and sensors.
- Requires much less space.
- Extends working life.
- Minimizes maintenance.
- Eliminates hydraulic fluid leaks.
- Reduces noise levels.
- Allows the flexibility of computer programmed positioning.

Exlar Roller Screws vs Ball Screws Performance

Loads and Stiffness: Due to design factors, the number of contact points in a ball screw is limited by the ball size. Exlar's planetary roller screw designs provide many more contact points than possible on comparably sized ball screws. Since the number of contact points is greater, roller screws have greater load carrying capacities, plus improved stiffness. Plus an Exlar roller screw actuator takes up much less space to meet the designer's specified load rating.

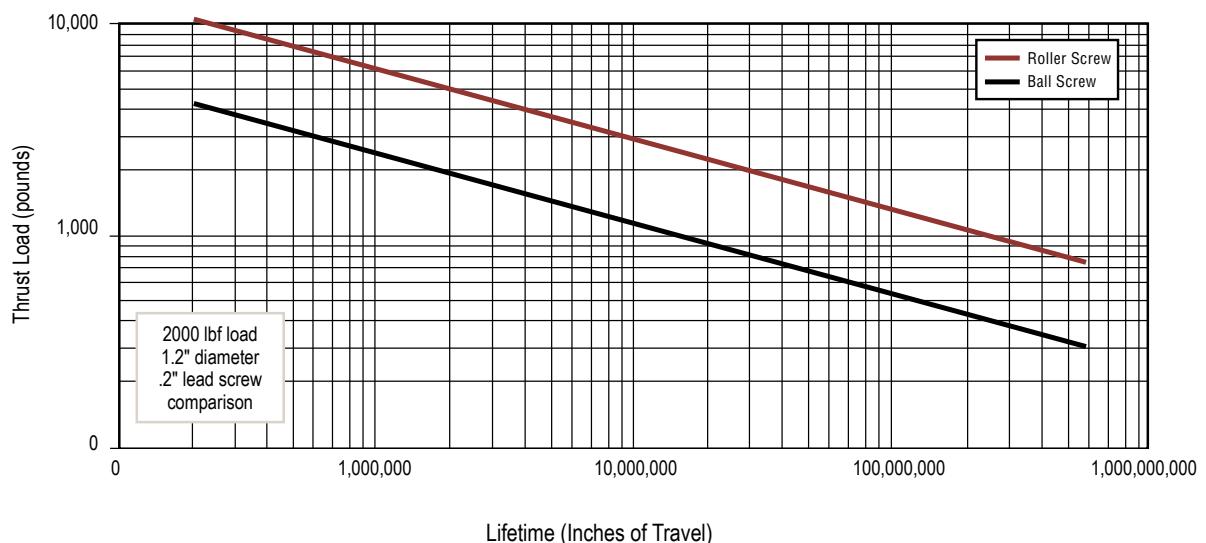

Travel Life: As you would expect, with their higher load capacities, roller screws deliver major advantages in working life. Usually measured in "Inches of Travel," the relative travel lives for roller and ball screws are displayed on the graph on page 3. As shown, in a 2,000 lb. average load application applied to a 1.2 inch screw diameter with a 0.2 inch lead, the roller screw will have an expected service life that is 15 times greater than that of the ball screw.

Speeds: Typical ball screw speeds are limited to 2000 rpm and less, due to the interaction of the balls colliding with each other as the race rotates. In contrast, the rollers in a roller screw are

fixed in planetary fashion by journals at the ends of the nut and therefore do not have this limitation. Hence, roller screws can work at 5000 rpm and higher, producing comparably higher linear travel rates.

Lifetime Comparison (Roller vs Ball Screws)

Roller Screw vs. Other Linear Motion Technologies

(Used in electronic positioning applications)

	Exlar Roller Screws	Acme Screws	Ball Screws	Hydraulic Cylinders	Pneumatic Cylinders
Load ratings	Very High	High	High	Very High	Low
Lifetime	Very long, many times greater than ball screw	Very low, due to high friction & wear	Moderate	Can be long with proper maintenance	Can be long with proper maintenance
Speed	Very high	Low	Moderate	Moderate	Very high
Acceleration	Very high	Low	Moderate	Very high	Very high
Electronic Positioning	Easy	Moderate	Easy	Difficult	Very Difficult
Stiffness	Very high	Very high	Moderate	Very high	Very low
Shock Loads	High	Very high	Moderate	Very high	High
Relative Space Requirements	Minimum	Moderate	Moderate	High	High
Friction	Low	High	Low	High	Moderate
Efficiency	>90%	approx 40%	>90%	<50%	<50%
Installation	Compatible with standard servo electronic controls	User may have to engineer a motion/actuator interface	Compatible with standard servo electronic controls	Complex, requires servo-valves, high pressure plumbing, filtering, pumps linear positioning & sensing	Very complex requires servo-valves, plumbing, filtering, compressors linear positioning & sensing
Maintenance	Very low	High, due to poor wear characteristics	Moderate	Very high	High
Environmental	Minimum	Minimum	Minimum	Hydraulic fluid leaks & disposal	High noise levels

GS Series Integrated Motor/Actuator

GS Series

GSX and GSM Common Benefits

The GS Series linear actuators by Exlar offers you two grades of actuator to provide cost effective options in order to meet your application's requirements. View the chart below to compare the GSX and GSM models.

All GS Series actuators use a specially designed roller screw mechanism for converting electric motor power into linear motion within the actuator. Planetary rollers, assembled around the actuator's extending rod, follow threads which are precisely machined on the inside surface of the actuator's hollow armature. Linear motion is produced in precise synchronization with the armature rotation. Because roller screw mechanism has an inherently larger cumulative contact surface, these actuators have a much longer working life, and can handle heavier loads at higher speeds than is possible from a similarly sized ball screw system.

Exlar's T-LAM segmented lamination stator technology delivers higher continuous motor torque than in traditionally wound motors. T-LAM technology consists of stator segments, each containing individual phase wiring for maximum motor performance. The improved efficiencies of the GSX Series are a result of the limited heat generation qualities inherent in the segmented stator design (see diagram). The elimination of end turns in the stator, and the use of thermally conductive potting removes the parts most susceptible to failure in a traditional stator. Other design advantages include:

- Neodymium-iron-boron magnets provide high flux density and maximum motor torque.
- Thermally conductive potting of the entire stator provides increased heat dissipation and protection from contamination in oil-cooled units.
- Each stator segment contains individual phase wiring. External winding of individual segments provides maximum slot fill for maximum motor performance.
- Class 180 H insulation systems compliant with UL requirements.
- UL recognized component.
- CE compliant.

Integrated Motor and Actuator in One Compact Unit

With other actuator technologies, customers are usually responsible for engineering the linear motion system. This process usually includes purchasing the motor, gear reducer, timing belt, mounting hardware, flexible couplings, etc. separately. Then these components must be assembled to perform properly for a given application.

GS Series actuators eliminate all this systems engineering. These units are single, fully integrated component packages that are much smaller than traditional rotary-to-linear conversion mechanisms.

Designed for Closed Loop Servo Systems

Their brushless servo design means GS Series units can be used in advanced closed-loop servo systems when velocity regulation and position control are required. Position feedback can be delivered in a number of different forms. These include resolvers, encoders, or internally mounted linear position feedback sensors.

GSX and GSM Differences	GSX (pg 5)	GSM (pg 36)
Frame Sizes	20, 30, 40, 50, 60	20, 30, 40
Roller Screw Option	High Capacity	Standard Capacity
Ingress Protection	IP65S	IP54S (IP65S optional)
Motor Stacks	1, 2, 3	1, 2
Life vs. Ball Screw	15X	2 to 5X
Oil Cooling Option	Yes	No
Rated Force (lbf)	92 - 15,000	92 - 3,966
Speeds (ips)	5 - 40	5 - 37.5
Backlash (in)	0.004	0.008

GSX SERIES

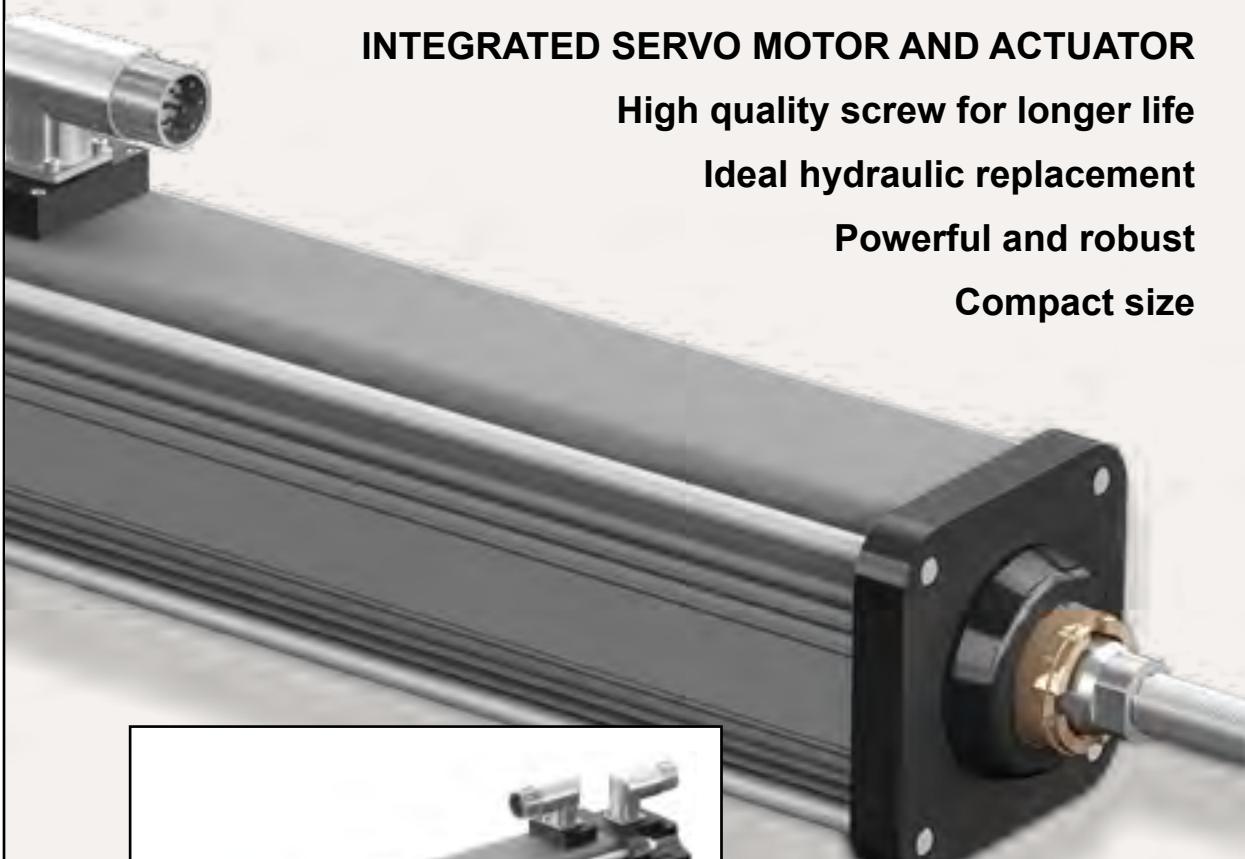

INTEGRATED SERVO MOTOR AND ACTUATOR

High quality screw for longer life

Ideal hydraulic replacement

Powerful and robust

Compact size

GSX Series

High Capacity Integrated Motor/Actuator

Description

For applications that require long life and continuous duty, even in harsh environments, the GSX Series actuator offers a robust solution. The life of these actuators can exceed that of a ball screw actuator by 15 times, all while delivering high speeds and high forces.

Sealed for Long Life with Minimum Maintenance

GSX Series actuators have strong advantages wherever outside contaminants are an issue. In most rotary-to-linear devices, critical mechanisms are exposed to the environment. Thus, these actuators must be frequently inspected, cleaned and lubricated.

In contrast, the converting components in all Exlar GSX units are mounted within sealed motor housing. With a simple bushing and seal on the smooth extending rod, abrasive particles or other contaminants are prevented from reaching the actuator's critical mechanisms. This assures trouble-free operation even in the most harsh environments.

Similarly, lubrication requirements are minimal. GSX actuators can be lubricated with either grease or recirculated oil. Recirculated oil systems eliminate this type of maintenance altogether. A GSX Series actuator with a properly operating recirculating oil system will operate indefinitely, without any other lubrication requirements.

Feature	Standard	Optional
External anti-rotate mechanism	No	Yes
Internal Anti-rotate Mechanism	No	Yes
Pre-loaded follower	No	Yes
Electric brake	No	Yes
External End Switches	No	Yes
Connectors	Right Angle, Rotatable	Custom Connectors
Mounting Style	Extended Tie Rods, Side Tapped Mounting Holes, Trunnion, Rear Clevis, Front or Rear Flange	Custom Mountings
Rod End	Male or Female: U.S. Standard or Metric	Specials Available To Meet OEM Requirements
Lubrication	Greased, Oil Connection Ports are Built-in for Customer Supplied Recirculated Oil Lubrication	Specials Available To Meet OEM Requirements
Primary Feedback	Standard Encoders or Resolvers to Meet Most Amplifier Requirements	Custom Feedback

Technical Characteristics		
Frame Sizes in (mm)	2 (60), 3 (80), 4 (100), 5.5 (140), 7 (180)	
Screw Leads in (mm)	0.1 (2), 0.2 (5), 0.25 (6), 0.4 (10), 0.5 (13), 0.75 (19), 1 (25)

Force Range	103 to 11,528 lbf (458 to 51 kN)	
Maximum Speed	up to 37.5 in/sec (952 mm/s)	

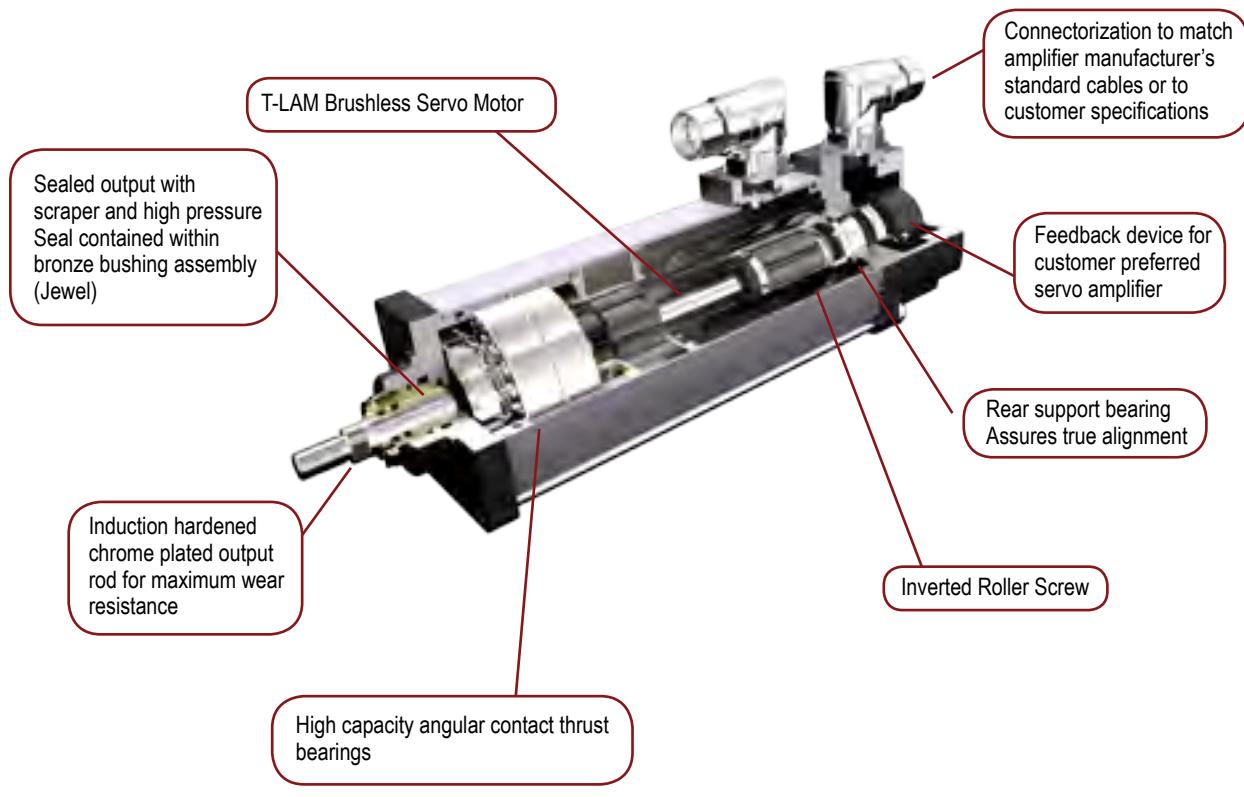

Operating Conditions and Usage		
Accuracy:		
Screw Lead Error	in/ft (μ m / 300 mm)	0.001 (25)
Screw Travel Variation	in/ft (μ m / 300 mm)	0.0012 (30)
Screw Lead Backlash	in	0.004 maximum
Ambient Conditions:		
Standard Ambient Temperature	°C	0 to 65
Extended Ambient Temperature*	°C	-30 to 65
Storage Temperature	°C	-40 to 85
IP Rating		IP65S
Vibration**		3.5 grms; 5 to 520 hz

* Consult Exlar for extended temperature operations

** Resolver feedback

Ratings at 25°C, operation over 25°C requires de-rating.

Product Features

- 1 -Exlar standard M23 style and manufacturer's connector
- 2 -Embedded leads 3 ft. standard *
- 3 -Front flange and rear flange*
- 4 -Male metric thread SS and female, metric thread
- 5 -Rear clevis
- 6 -Side mount*, double side mount, metric side mount*, and metric double side mount
- 7 -Side trunnion and metric side trunnion
- 8 -Extended tie rods and metric extended tie rods
- 9 -Metric rear clevis
- 10 -Male, US standard thread and male, US standard thread SS
- 11 -Male, metric thread and male metric thread SS
- 12 -Female, US standard thread and female, US standard thread SS
- 13 -Female, metric thread and female, metric thread SS
- 14 -External anti-rotate
- 15 -Manual drive, handwheel with interlock switch
- 16 -Protective bellows
- 17 -Splined main rod - Female
- 18 -Splined main rod - Male
- 19 -Rear brake
- 20 -External limit switch - N.O., PNP
- 21 -External limit switch - N.C., PNP

GSX Series Integrated Motor/Actuator

Industries and Applications:

Hydraulic cylinder replacement	Sawmill/Forestry	Plastics
Ball screw replacement	Saw Positioning	Die Cutters
Pneumatic cylinder replacement	Fence Positioning	Part Eject
Automotive	Ventilation Control Systems	Core Pull
Dispensing	Machining	Formers
Welding	Material Cutting	Material Handling
Pressing	Broaching	Nip Roll Positioning
Riveting / Fastening / Joining	Metal Forming	Tension Control
Food Processing	Tube Bending	Web Guidance
Sealing	Stamping	Wire Winding
Dispensing	Entertainment / Simulation	Test
Forming	Animatronics	Fatigue Testing
Pick and Place Systems	Training Simulators	Load Simulation Testing
Fillers	Ride Automation	
Cutting / Slicing / Cubing	Medical Equipment	
	Volumetric Pumps	
	Patient Positioning	

Repeatable force control plus positioning accuracy extends the life of costly tools when Exlar linear actuators are used for precision applications.

Repeatable force, reliable positioning accuracy, and flexible control make GSX actuators a perfect fit for assembly presses or test stands.

¹ Back drive force is nominal value only. Operating conditions can cause wide variations in back drive force. Exlar cannot assure that an actuator will or will not back drive.

DEFINITIONS:

Continuous Force: The linear force produced by the actuator at continuous motor torque.

Max Velocity: The linear velocity that the actuator will achieve at rated motor rpm.

Friction Torque (standard screw): Amount of torque required to move the actuator when not coupled to a load.

Friction Torque (preloaded screw): Amount of torque required to move the actuator when not coupled to a load.

Back Drive Force: Amount of axial force applied to the rod end of the actuator that will produce motion with no power applied to the actuator.

Min Stroke: Shortest available stroke length.

Max Stroke: Longest available stroke length.

C_a (Dynamic Load Rating): A design constant used when calculating the estimated travel life of the roller screw.

Inertia (zero stroke): Base inertia of an actuator with zero available stroke length.

Inertia Adder (per inch of stroke): Inertia per inch of stroke that must be added to the base (zero stroke) inertia to determine the total actuator inertia.

Weight (zero stroke): Base weight of an actuator with zero available stroke length.

Weight Adder (per inch of stroke): Weight adder per inch of stroke that must be added to the base (zero stroke) weight to determine the total actuator weight.

The GSX60-06 can only accommodate a single stack stator.

Specifications subject to change without notice.

Estimated Service Life

The L_{10} expected life of a roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained roller screws manufactured are expected to meet or exceed. This is not a guarantee and these charts should be used for estimation purposes only.

The underlying formula that defines this value is:
Travel life in millions of inches, where:

$$C_a = \text{Dynamic load rating (lbf)} \quad L_{10} = \left(\frac{C_a}{F_{cml}} \right)^3 \times \ell$$

$$F_{cml} = \text{Cubic mean applied load (lbf)}$$

$$\ell = \text{Roller screw lead (inches)}$$

For additional details on calculating estimated service life, please refer to the Engineering Reference, page 212.

Service Life Estimate Assumptions:

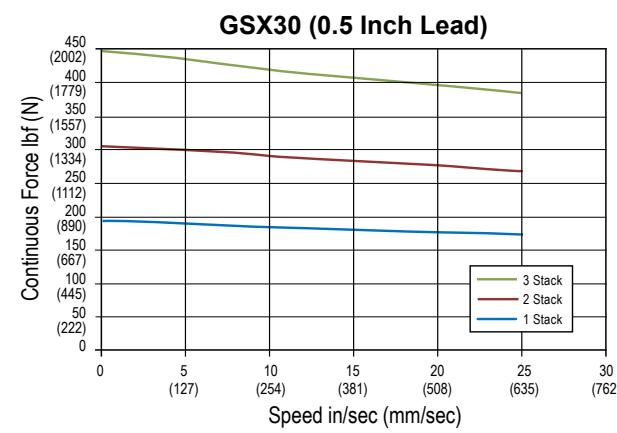

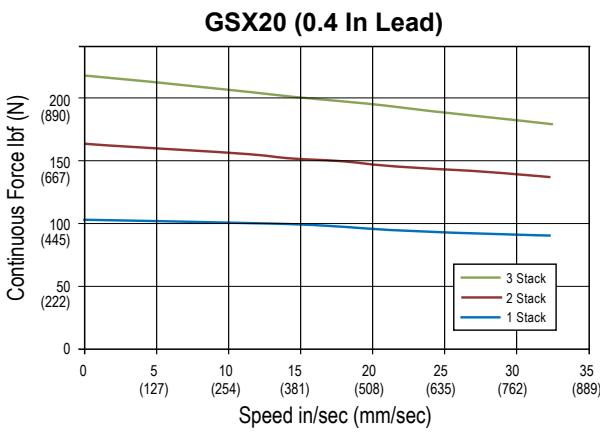

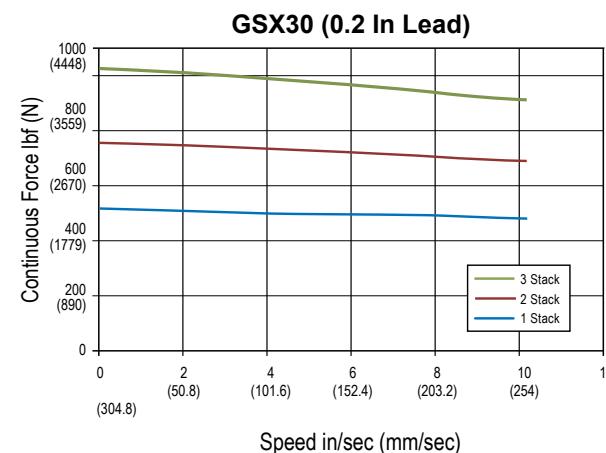

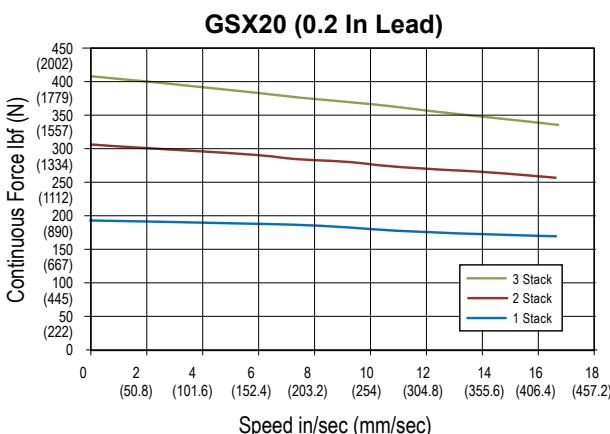

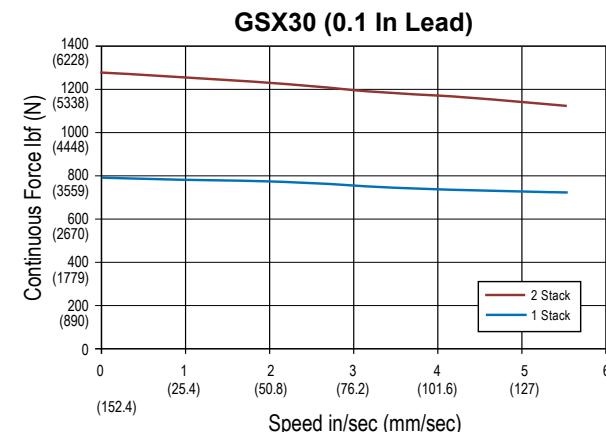

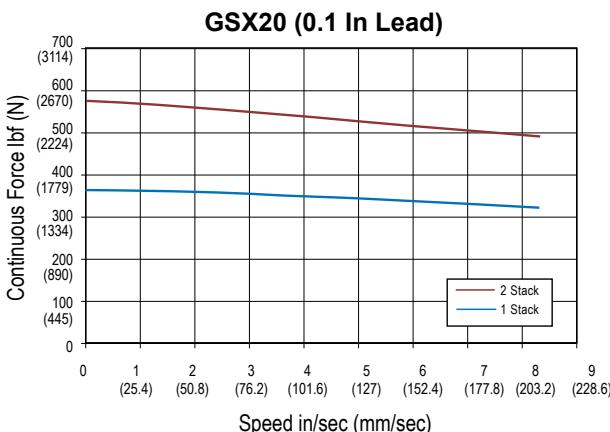

- Sufficient quality and quantity of lubrication is maintained throughout service life (please refer to engineering reference on page 212 for lubrication interval estimates.)
- Bearing and screw temperature between 20° C and 40° C
- No mechanical hard stops (external or internal) or impact loads
- No external side loads
- Does not apply to short stroke, high frequency applications such as fatigue testing or short stroke, high force applications such as pressing. (For information on calculating estimating life for unique applications please refer to the engineering reference on page 212.)

GSX Series Integrated Motor/Actuator

Speed vs. Force Curves

These charts represent typical linear speed versus linear force curves for the GSX actuators using common brushless motor amplifiers. The GSX Series are compatible with many different brushless motor amplifiers; any differences in the performance

ratings of these amplifiers can alter the actuator's performance. Thus, the curves below should be used for estimation only. (Further information is available by contacting your local sales representative.)

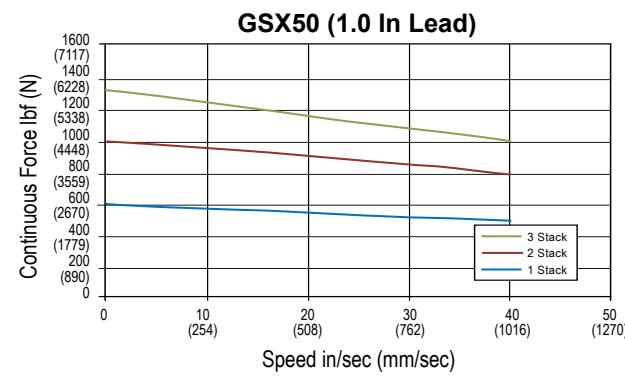

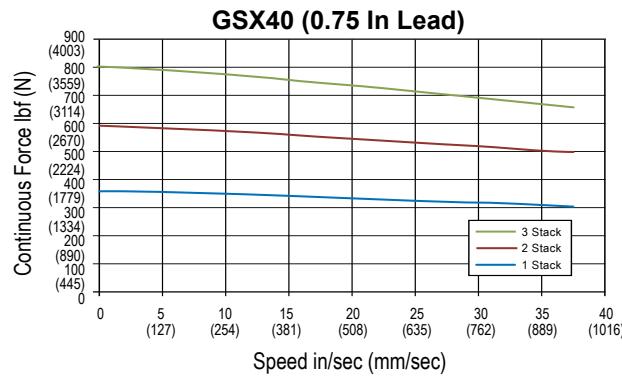

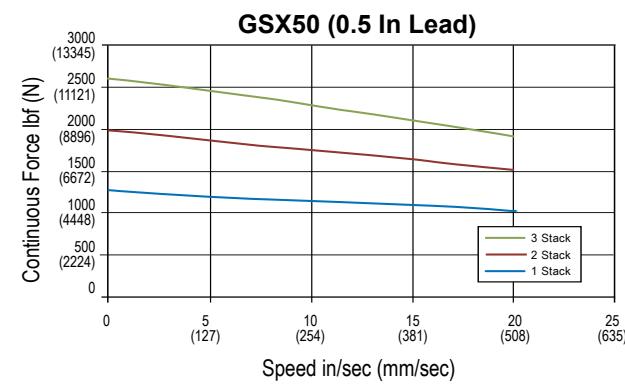

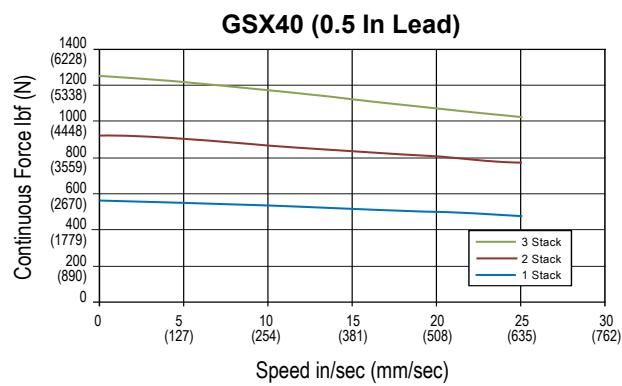

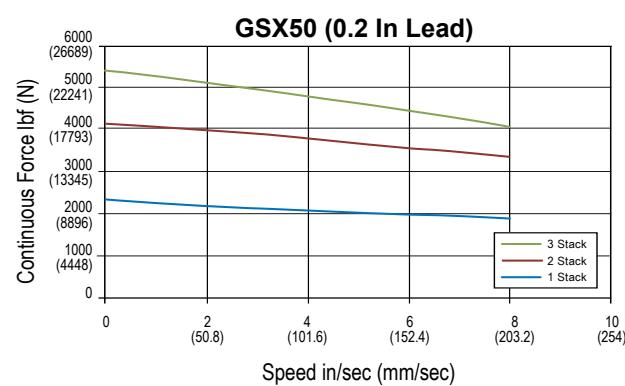

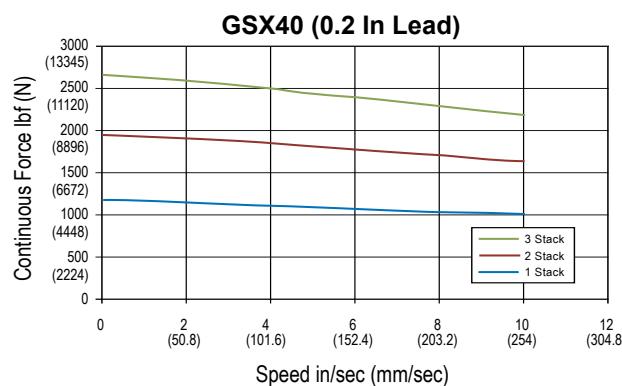

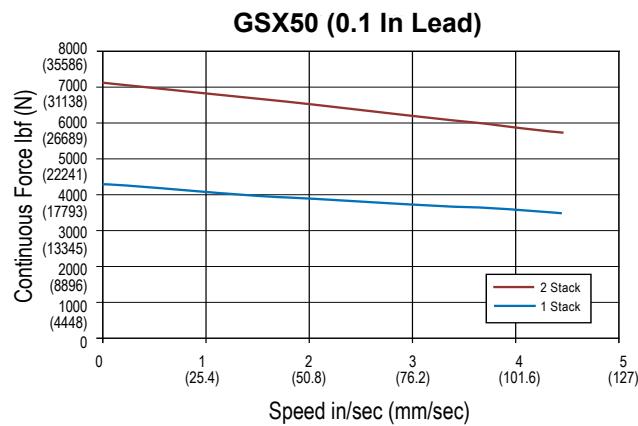

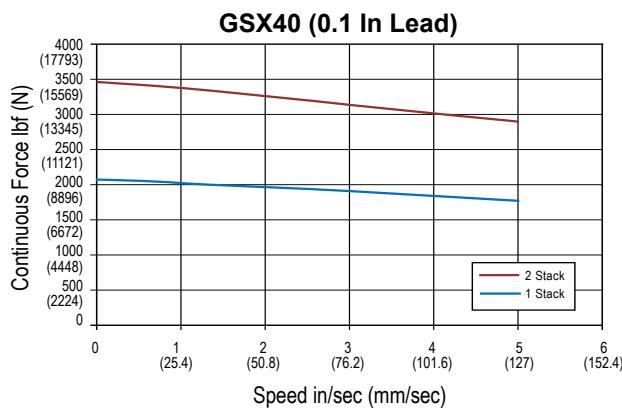

See page 24 for explanation of motor stator options (1x8, 2x8, 3x8)
See page 9 for mechanical specifications

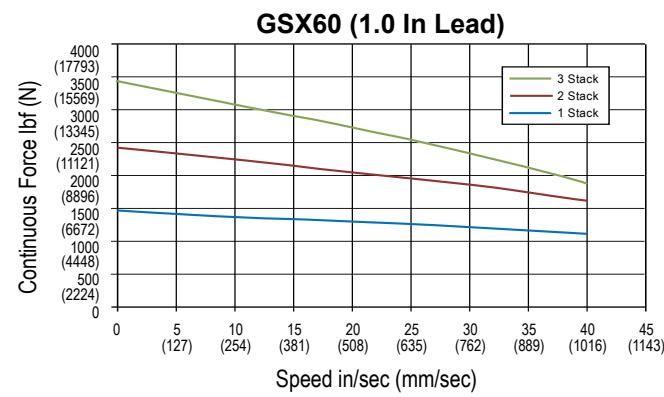

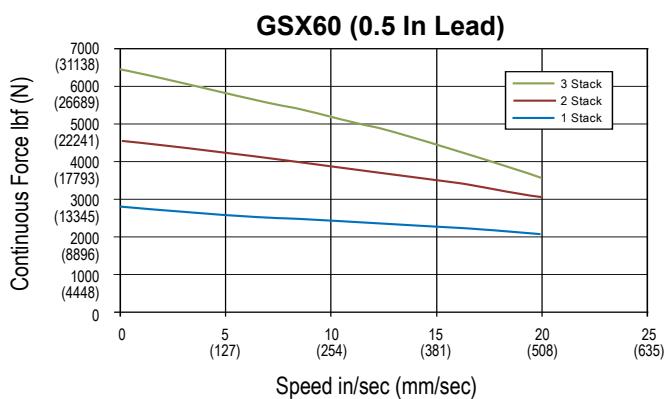

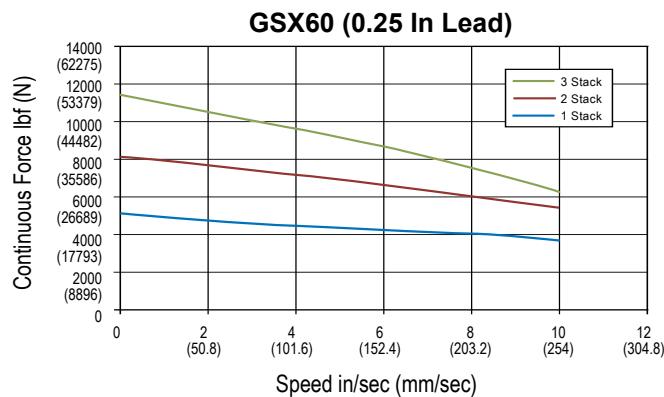

Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 1/4" for GSX20 and 10" x 10" x 3/8" for GSX30. Testing ambient temperature 25°C.

GSX Series Integrated Motor/Actuator

GSX Series

GSX Series Integrated Motor/Actuator

See page 24 for explanation of motor stator options (1x8, 2x8, 3x8)

See page 9 for mechanical specifications

Test data derived using NEMA recommended aluminum heatsink 12" x 12" x 1/2" for GSX40 and 12" x 12" x 1/2" for GSX50. Testing ambient temperature 25°C.

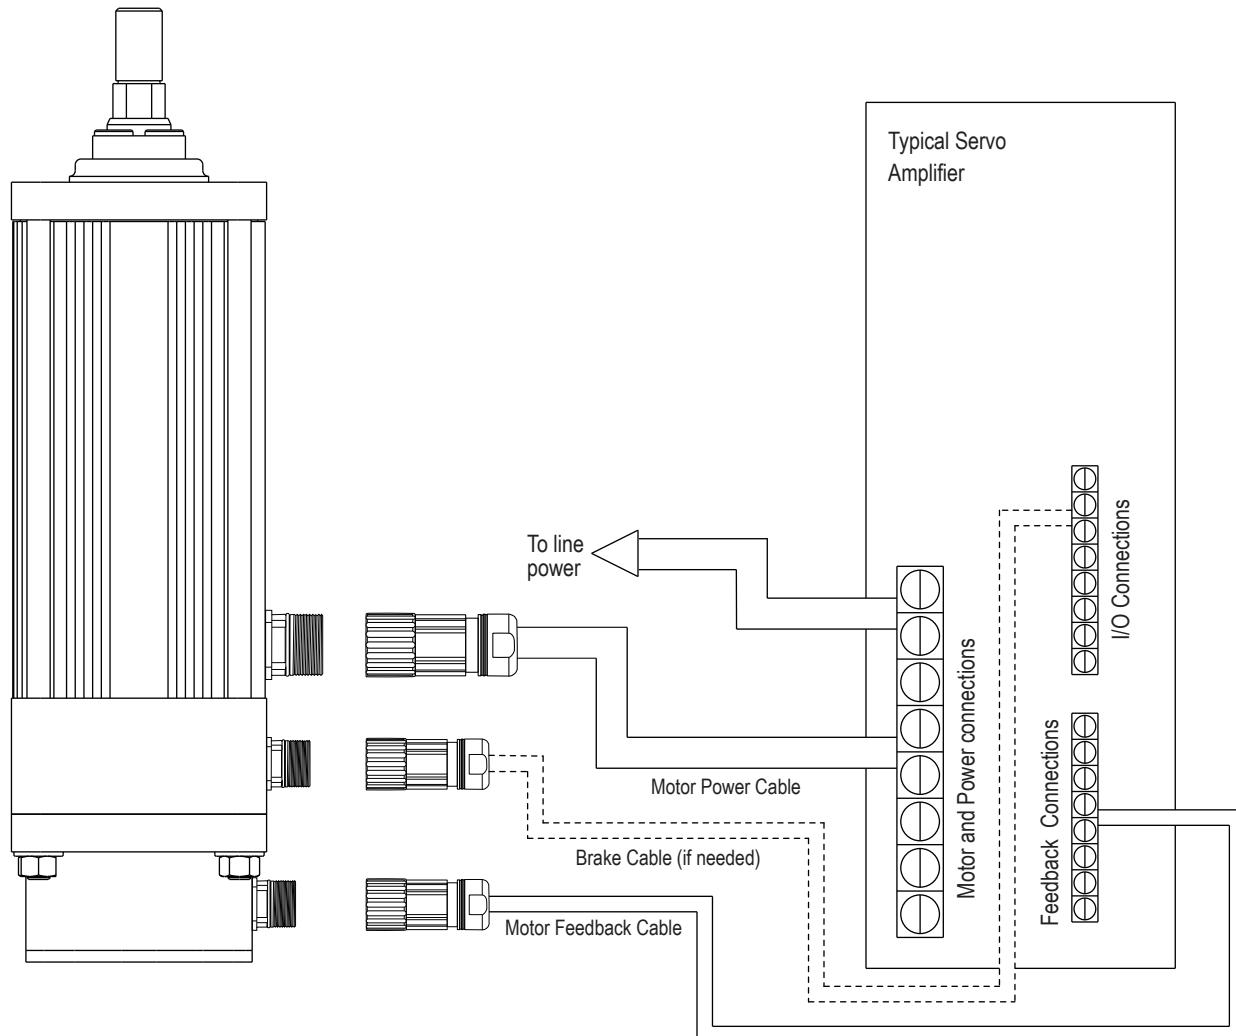

System Configuration

GSX Series actuators include an integrated brushless servo motor. The unique design gives users a variety of feedback configuration options so GSX units can be powered by almost any brushless motor amplifier on the market.

This flexibility means GSX actuators can be incorporated into today's high performance single and multi-axis motion control

systems. For food and beverage packaging, to multi-axis turning centers, to aircraft assembly, the GSX Series units offers incredible performance and durability.

The schematic below shows typical connections for a single axis system with actuator and servo amplifier.

GSX Series Integrated Motor/Actuator

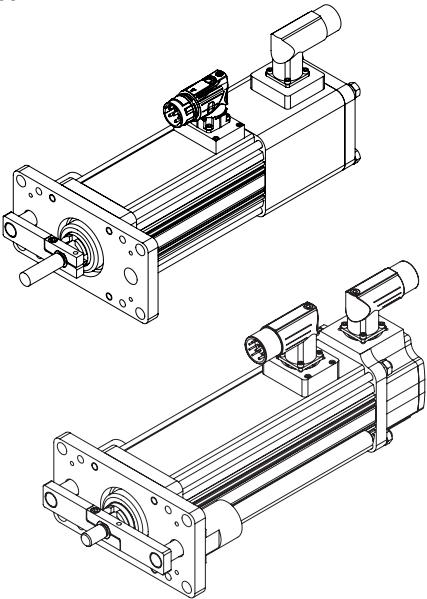

Options

AR =Anti-rotation Option

The unique design of the GSX Series of linear actuators permits the extending rod to rotate. This capability simplifies setup by allowing the user to rotate the rod in and out of the actuator for mechanical attachment or system testing.

However, this feature also requires that once setup and testing are completed, the rod be kept from rotating so proper linear motion will be maintained. In most applications the actuator's load is coupled to linear bearings, or some other support device. In these cases the load cannot rotate, so a separate anti-rotation system is not needed.

For applications in which the load is free to rotate, Exlar offers anti-rotation systems. Shorter GSX units use an anti-rotation arm on one side of the actuator. Longer strokes use arms on both sides.

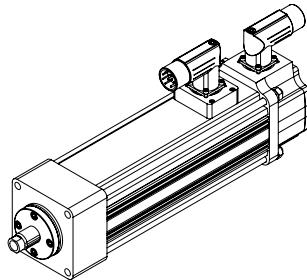

RB = Rear Electric Brake

This option provides an internal holding brake for GSX Series actuators. The brake is spring activated and electrically released.

SR = Splined Main Rod

This option provides a ball spline shafting main rod with a ball spline nut that replaces the standard front seal and bushing assembly. This rod restricts rotation without the need for an external mechanism. The rod diameter will be the closest metric equivalent to our standard rod sizes. Since this option is NOT sealed, it is not suitable for environments in which contaminants may enter the actuator.

Note: This option affects overall length and mounting dimensions for GSX actuators. Consult your local sales representative if using splined main rod. Due to the reduced diameter of the splined main rod on the GSX50, the standard "A", "F", and "B" rod ends are not available and an "X" should be used in the model mask. Please see Actuator Rod Ends with Splined Main Rod Options on page 32 for dimensions.

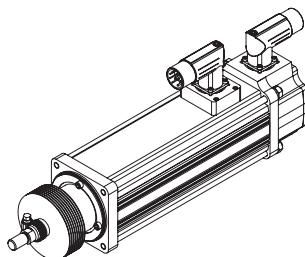

PF = Preloaded Follower

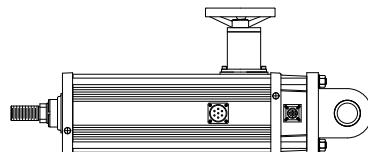

This option offers a lower backlash follower for the GSX Series actuator. The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the standard non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the calculated travel life of the same size and lead of a non-preloaded screw for the same application. The preloaded follower is not available with the LT linear feedback option.

PB = Protective Bellows

This option provides an accordion style protective bellows to protect the main actuator rod from damage due to abrasives or other contaminants in the operating environment. The standard material of this bellows is S2 Neoprene coated nylon with sewn construction. This standard bellows is rated for environmental temperatures of -40 to 250 degrees F. Longer strokes require the main rod of the actuator to be extended beyond standard length. Not available with extended tie rod mounting option. Please contact your local sales representative for details.

**HW = Manual Drive – Handwheel**

A manual drive handwheel installed on the side of the actuator. Includes an engage/disengage lever that controls an interrupt switch. This lever is not tied to the motor and must be engaged/disengaged, before operating the motor. Not available on all products and may not be available with a holding brake.

**L1, L2, L3 = Adjustable External Travel Switches**

This option allows up to 3 external switches to be included with the GSX Series Actuator. These switches provide travel indication to the controller and are adjustable (must purchase external anti-rotate for this option). See page 31 for details.

GSX Series Integrated Motor/Actuator

Motor Speed

All Exlar T-LAM motors and actuators carry a standard motor speed designator (see chart). This is representative of the standard base speed of the motor for the selected bus voltage.

Designator	Base Speed	Actuator/Motor Series
-50	5000 rpm	GSX20
-30	3000 rpm	GSX30, GSX40
-24	2400 rpm	GSX50, GSX60
01-99	Special Speed, Consult Exlar	

If the model number is created and the location for the motor speed designator is left blank, this is the base speed to which the motor will be manufactured. The model number can also be created including this standard speed designator.

Exlar also provides the flexibility to manufacture all of its T-LAM products with special base speeds to match your exact application requirements. This may be a higher than standard speed motor, or lower base speed than standard which will allow you to get the required torque at a speed optimized to your application and use the minimum amount of current from your amplifier.

The call-out for a special speed is configured in the model number by using a two digit code from 01-99. This code represents the number, in hundreds, of RPM that is the base speed for the particular motor.

For example, a GSX30-0301-OSM-AD1-118-30 motor that normally has a 3000 RPM standard winding can be changed to a 3300 RPM winding by changing the -30 to a -33. It can be changed to a 5000 RPM winding by changing the -30 to a -50.

Changing this speed designator changes the ratings of the motor; these must be obtained from your local sales representative. Also, it is not possible to produce every possible speed from -01 to -99 for each motor at each voltage, so please contact your local sales representative for confirmation of the speed that is desired for the application.

Feedback

Absolute Feedback

Due to the variability in size of some feedback devices, especially absolute feedback devices which are often very large relative to the size of the actuator motor, the actual size of the actuator may differ in length and width from these drawings for feedback types other than standard resolvers and standard encoders. Please consult Exlar for details. In the event that you order an actuator that differs from these standard dimensions, you will be sent a drawing of the final configuration of your actuator for approval.

Motor Stators

GSX motor options are described with a 3 digit code. The first digit calls out the stack length, the second the rated bus voltage, and the third the number of poles of the motor. Refer to the mechanical/electrical specifications for motor torque and actuator rated force.

118	1 stack	115 Vrms	8 Pole	Class 180 H
138		230 Vrms		
158		400 Vrms		
168		460 Vrms		
218	2 stack	115 Vrms	8 Pole	Class 180 H
238		230 Vrms		
258		400 Vrms		
268		460 Vrms		
318	3 stack	115 Vrms	8 Pole	Class 180 H
338		230 Vrms		
358		400 Vrms		
368		460 Vrms		

* Low voltage stators may be limited to less than catalog rated torque and/or speed. Please contact your local sales representative when ordering this option.

Rod End Attachments

Rear Clevis Pin Rod Eye

Spherical Rod Eye Rod Clevis

See drawings on pages 32-34.

Attachments ordered separate from actuator.

Oil Cooling and Lubrication Option

If you plan to use oil cooling with your GSX actuator, consult your local sales representative to discuss your application.

Exlar GSX actuators are normally delivered with high performance synthetic grease as a lubricant. The application of grease for the roller screw mechanism and bearings has proven adequate in thousands of applications over 25 years. However, in applications where the actuator is operated under high load, high speed and/or high duty cycle for extended periods of time, the grease will degrade prematurely and will eventually fail to provide the lubrication needed to maintain the operating efficiency and integrity of the roller screw and bearings. Continued operation of the actuator after the grease has broken down will cause premature failure of the device.

An ideal way to both lubricate and cool a GS Series actuator in high performance applications is to flow a small amount of oil at low pressure through the actuator while it is in operation. A small amount of oil flow can, in many cases, allow operation of the actuator beyond normal continuous rated power levels. Oil flow lubrication has been used successfully and extensively in the field, allowing Exlar actuators to deliver thousands of hours of service between re-lubrication intervals even in the most arduous of applications.

Oil lubrication also significantly reduces actuator maintenance, saving valuable production time. With a recirculating oil system, lubricating oil is easily changed without having to access or

dismount the actuator. The ability to monitor oil condition can extend the usable life of the actuator by keeping the lubrication clean and fresh.

Some special application and actuator configuration considerations must be addressed prior to selecting and ordering a GS actuator with oil lubrication. Please consult with Exlar Application Engineering prior to purchase.

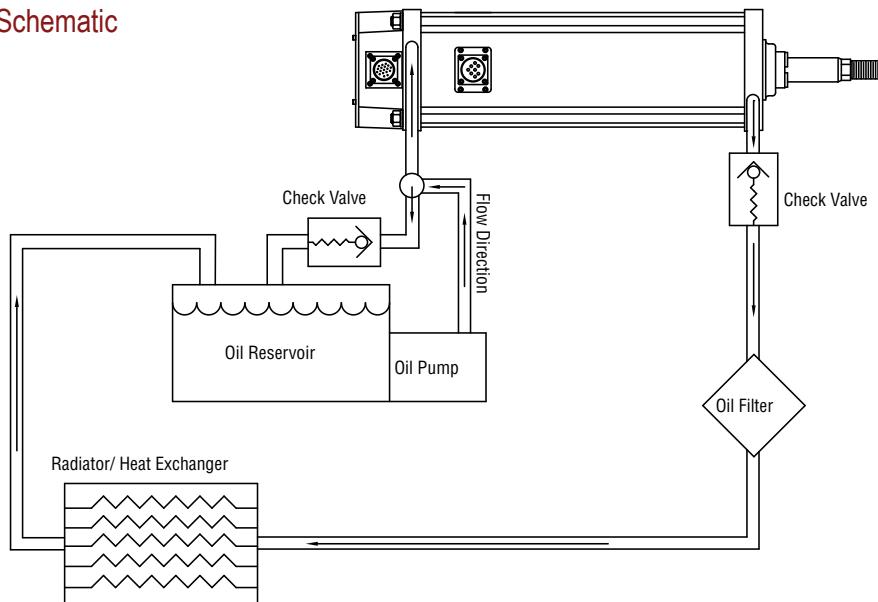

A typical oil flow lubrication system involves use of a commercially available lubrication pump and plumbing to recirculate the oil. A schematic example of a possible oil system is shown below. Exlar Application Engineering can assist you in the development of an appropriate oil system, or recommend a pre-packaged oil circulation system.

If you plan to use oil cooling with your GSX actuator, please consult Exlar to discuss your application.

Oil pressure within the actuator should never exceed 5 psi.

The Oil cooling option will limit maximum actuator acceleration.

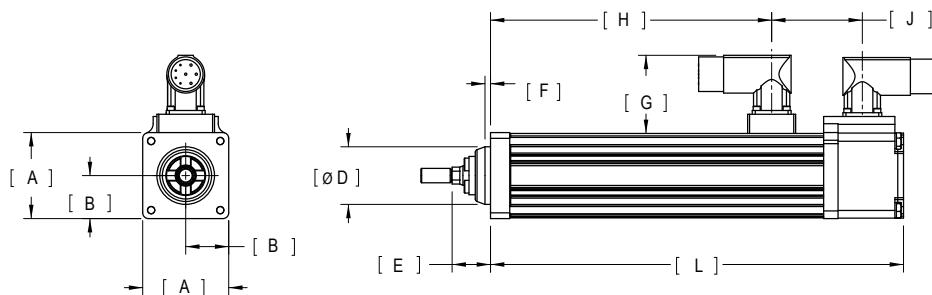

Example Oil System Schematic

1. If ordering a brake, add the following to dimension G:

GSX20 add 1.78 in (45.2 mm), GSX30 add 1.60 in (40.6 mm), GSX40 add 2.33 in (59.2 mm),
GSX50 add 2.5 in (63.5 mm), GSX60 add 3.58 in (90.9 mm)

GSX Series Integrated Motor/Actuator

Rear Brake Extension Option

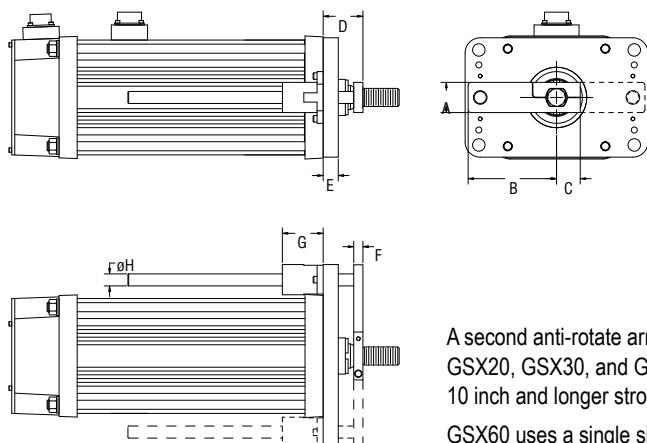

*Brake connector if needed.

A in (mm)	GSX20	GSX30	GSX40	GSX50	GSX60
1.78 (45.2)	1.60 (40.6)	2.33 (59.2)	2.50 (63.5)	3.58 (90.9)	

*Consult Exlar for connector and wiring information if ordering brake option.

Anti-rotation Option GSX/M20, GSX/M30, GSX/M40 and GSX60

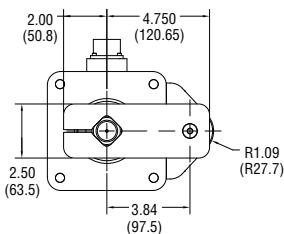

Dims in (mm)	GSX/M20	GSX/M30	GSX/M40	GSX60
A	0.60 (15.2)	0.79 (20.1)	1.25 (31.8)	1.75 (44.5)
B	1.81 (46.0)	2.54 (64.5)	3.78 (96.0)	5.79 (147)
C	0.54 (13.7)	0.71 (18.0)	0.98 (24.9)	1.55 (39.4)
D	1.00 (25.4)	1.30 (33.0)	1.64 (41.7)	1.94 (49.3)

F	0.28 (7.11)	0.32 (8.13)	0.38 (9.65)	0.50 (12.7)
G	0.31 (7.87)	1.69 (42.9)	1.69 (42.9)	2.81 (71.4)
øH	0.37 (9.40)	0.50 (12.7)	0.50 (12.7)	1.00 (25.4)

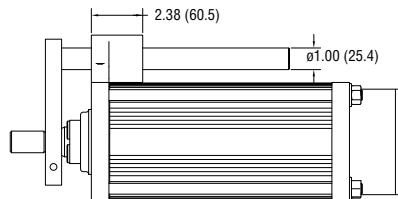

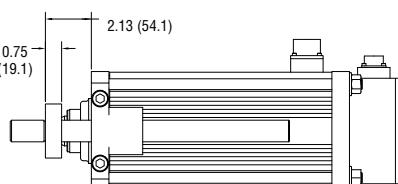

A second anti-rotate arm is used on GSX20, GSX30, and GSX40 models with 10 inch and longer stroke lengths.

GSX60 uses a single sided anti-rotate for all stroke lengths.

Anti-rotation Option GSX50

NOTE: GSX50 actuators use one arm for all stroke lengths.

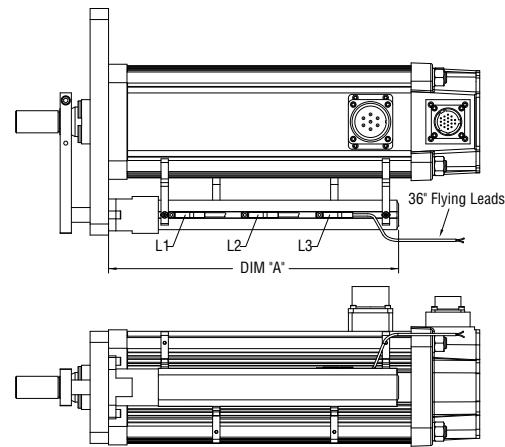

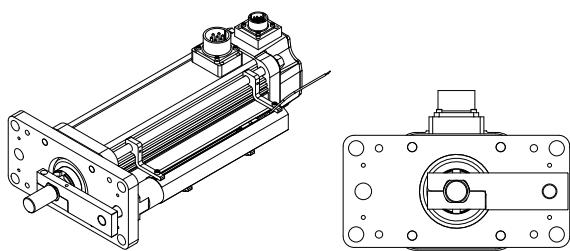

Pre-sale drawings and models are representative and are subject to change. Certified drawings and models are available for a fee. Consult your local Exlar representative for details.

External Limit Switch Option

The external limit switch option (requires anti-rotate option) for the GSX Series of linear actuators provides the user with 1, 2, or 3 externally mounted adjustable switches for use as the end of travel limit switches or home position sensors.

The number of switches desired is selected by ordering the L1, L2, or L3 option, in which 1, 2 or 3 switches will be provided, respectively.

The switches are 9-30 VDC powered, PNP output, with either normally open or normally closed logic operation depending on the switch configuration ordered. Switches are supplied with 1 meter of 3-wire embedded cable. Below is a diagram indicating which logic operation will be provided for each switch, based on the option ordered.

AR = External anti-rotate assembly ¹⁴
RB = Rear electric brake ³
HW = Manual drive, Handwheel with interlock switch ^{11, 16}
PB = Protective bellows ¹²
SR = Splined main rod ^{9, 15, 19}
L1/L2/L3 = External limit switches ⁵

NOTES:

1. The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the standard non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the calculated travel life of the same size and lead of a non-preloaded screw. Preloaded follower is not available with absolute linear (LT) internal feedback option.
2. Stator voltage and pole options allow for catalog rated performance at varying amplifier bus voltages and pole configuration requirements. Refer to performance specification on pages 9-11 for availability of 3 stack stator.
3. The brake option may require a third cable, consult local sales representative.
4. Available as described in Feedback Types.
5. Requires AR option.
6. 0.75 lead not available above 12 inch.
7. 1.0 lead not available above 10 inch stroke.
8. GSX60 uses M40 size 1.5 power connector.
9. If not otherwise specified by the customer, an M24X2 male rod end will be used on the GSX50. See note on page 26.
10. 0.1 lead not available over 10" stroke on GSX50.
11. Not available on GSX20.
12. N/A with extended tie rod mounting option.
13. Force, torque and current ratings are reduced 25% with this option.
14. A second anti-rotate arm is used on GSX20, 30 and 40 for 10 inch and longer stroke.
15. See page 24 for optimized stator offerings.
16. N/A with holding brake unless application details are discussed with your local sales representative.
17. Consult your local sales representative if ordering splined stainless steel main rod.
18. Anti-rotate with D or K mount N/A on 10 inch or longer stroke except in GSX50.
19. Not available in Stainless Steel.
20. For extended temperature operation consult factory for model number.

For cables and accessories, see page 202.

For options or specials not listed above or for extended temperature operation, please contact Exlar

GSM SERIES

INTEGRATED SERVO MOTOR AND ACTUATOR

Economical alternative to GSX

Standard capacity screw

GSM Series

Standard Capacity Roller Screw Technology

Description

This design incorporates superior roller screw technology with an integral brushless servo motor for medium to high performance motion control applications. The GSM Series offers 5 times the travel life and a smaller package with higher speed and higher load capacity than ball screws and other traditional rotary-to-linear conversion mechanisms. These features make the GSM Series an excellent replacement for ball screw actuators.

Selection of the proper feedback configuration allows GSM Series actuators to be powered by nearly any brand of brushless motor amplifier on the market. This flexibility allows these actuators to be incorporated into the highest performance single and multi-axis motion control systems in use today. In applications varying from food and beverage packaging, to multi-axis turning centers, to aircraft assembly, the GSM Series shows incredible performance and durability.

Feature	Standard	Optional
External anti-rotate mechanism	No	Yes
Internal Anti-rotate Mechanism	No	Yes
Pre-loaded follower	No	Yes
Electric brake	No	Yes
External End Switches	No	Yes
Connectors	Right Angle, Rotatable	Custom Connectors
Mounting Style	Extended Tie Rods, Side Tapped Mounting Holes, Trunnion, Rear Clevis, Front or Rear Flange	Custom Mountings
Rod End	Male or Female: U.S. Standard or Metric	Specials Available To Meet OEM Requirements
Lubrication	Greased, Oil Connection Ports are Built-in for Customer Supplied Recirculated Oil Lubrication	Specials Available To Meet OEM Requirements
Primary Feedback	Standard Encoders or Resolvers to Meet Most Amplifier Requirements	Custom Feedback

Technical Characteristics	
Frame Sizes in (mm)	2.25 (60), 3.3 (80), 3.9 (100)
Screw Leads in (mm)	0.1 (2.54), 0.2 (5.08), 0.4 (10.16), 0.5 (12.7), 0.75 (19.05)
Standard Stroke Lengths in (mm)	3 (76), 4 (102), 6 (152), 8 (203), 10 (254), 12 (305), 14 (356), 18 (457)
Force Range	103 to 3,457 lbf (458 to 15.3 kN)
Maximum Speed	Up to 37.5 in/sec (952 mm/sec) linear speeds

Operating Conditions and Usage		
Accuracy:		
Screw Lead Error	in/ft (μ m / 300 mm)	0.001 (25)
Screw Travel Variation	in/ft (μ m / 300 mm)	0.0012 (30)
Screw Lead Backlash	in	0.008 maximum
Ambient Conditions:		
Standard Ambient Temperature	°C	0 to 65
Extended Ambient Temperature*	°C	-30 to 65
Storage Temperature	°C	-40 to 85
IP Rating		IP54S
Vibration**		3.5 grms; 5 to 500 Hz

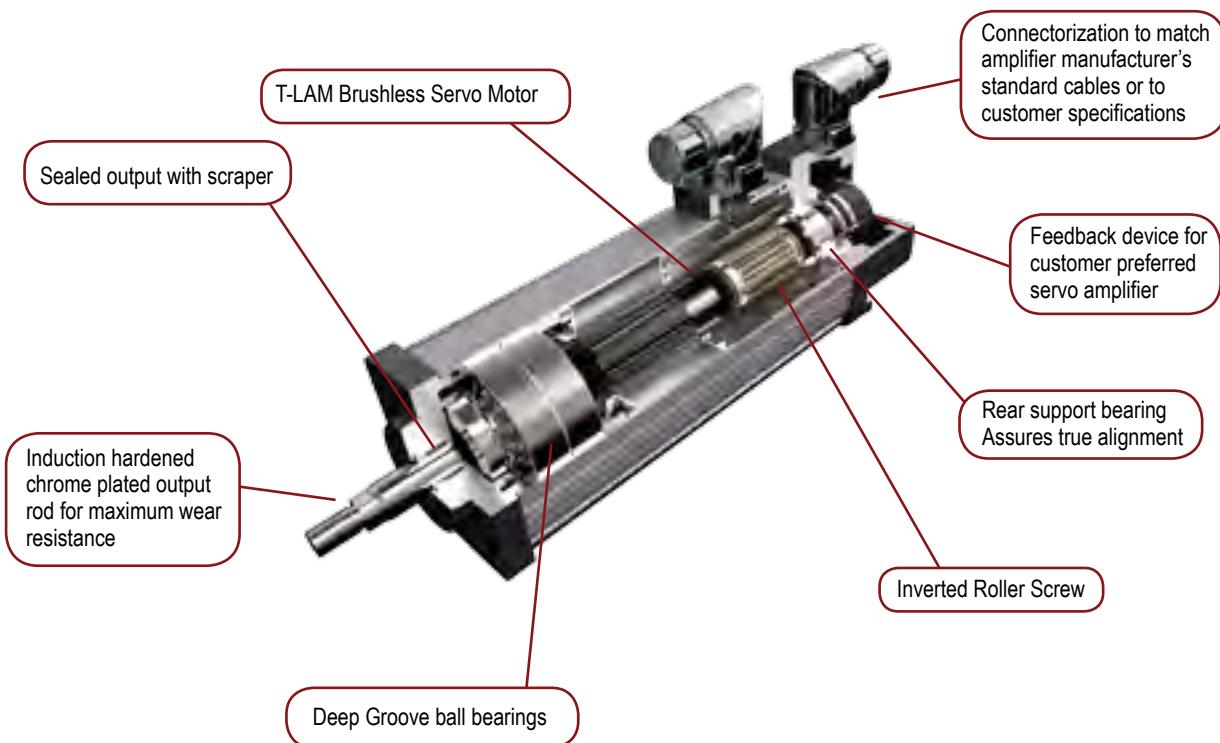

* Consult Exlar for extended temperature operations

** Resolver feedback

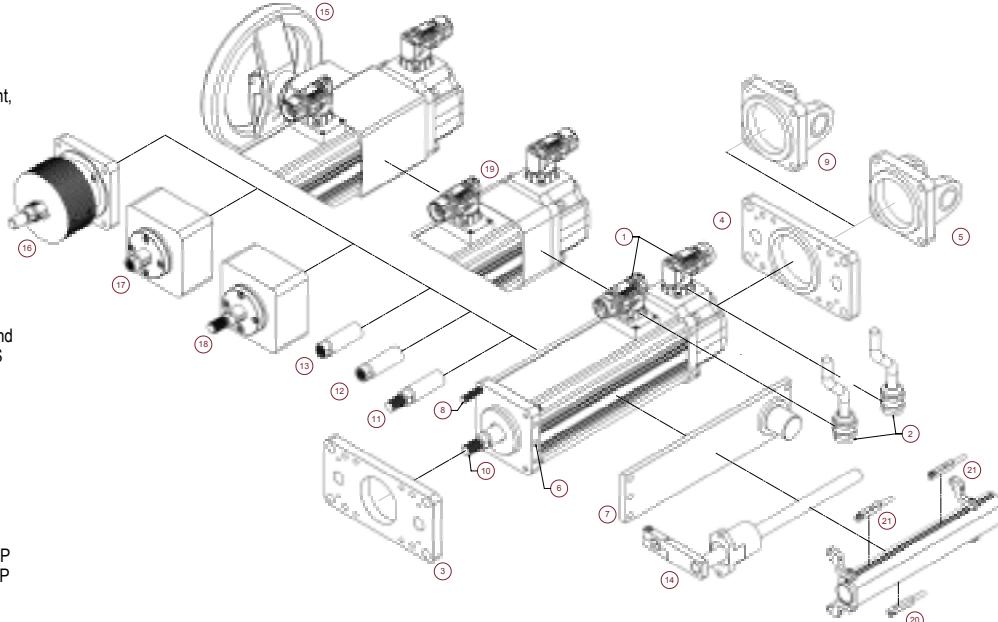

Ratings at 25°C, operation over 25°C requires de-rating.

GSM Series Integrated Motor/Actuator

Product Features

- 1 - Exlar standard M23 style and manufacturer's connector
- 2 - Embedded leads 3 ft. standard*
- 3 - Front flange and rear flange*
- 4 - Male metric thread SS and female, metric thread
- 5 - Rear clevis
- 6 - Side mount*, double side mount, metric side mount*, and metric double side mount
- 7 - Side trunnion and metric side trunnion
- 8 - Extended tie rods and metric extended tie rods
- 9 - Metric rear clevis
- 10 - Male, US standard thread and male, US standard thread SS
- 11 - Male, metric thread and male metric thread SS
- 12 - Female, US standard thread and female, US standard thread SS
- 13 - Female, metric thread and female, metric thread SS
- 14 - External anti-rotate
- 15 - Manual drive, handwheel with interlock switch
- 16 - Protective bellows
- 17 - Splined main rod- Female
- 18 - Splined main rod - Male
- 19 - Rear brake
- 20 - External limit switch - N.O., PNP
- 21 - External limit switch - N.C., PNP

* Consult Factory

Industries and Applications:

Hydraulic cylinder replacement

Ball screw replacement

Pneumatic cylinder replacement

Automotive

Parts Clamping

Automated Assembly

Food Processing

Sealing

Dispensing

Forming

Pick and Place Systems

Fillers

Cutting / Slicing / Cubing

Process Control

Control Valves

Conveyor Diverters / Gates

Dampers

Pilot Valves

Entertainment / Simulation

Robot Manipulator Arms

Test Stands

Medical Equipment

Volumetric Pumps

Patient Positioning

Plastics

Cutoffs

Die Cutters

Molding

Formers

Material Handling

Open / Close Doors

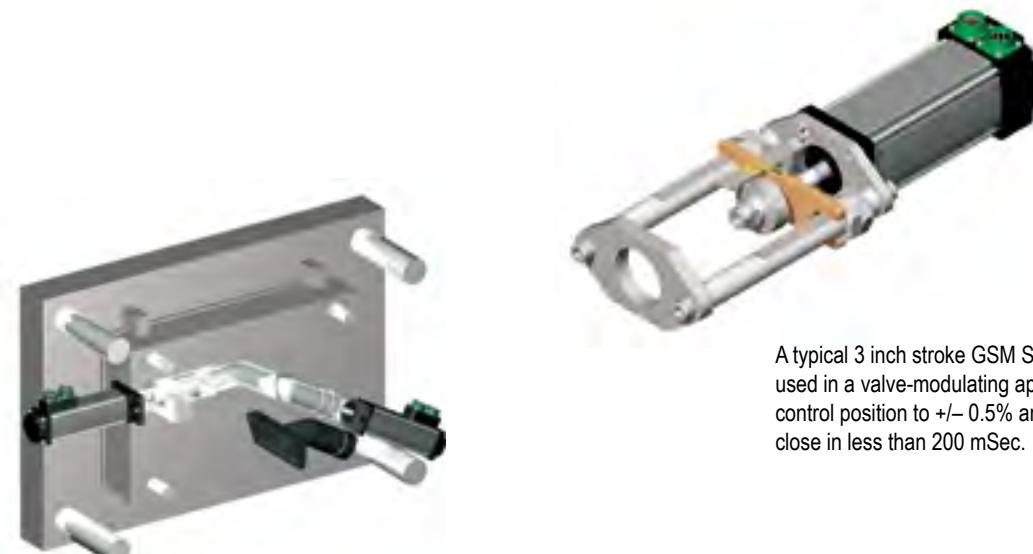

Automated Flexible Fixturing

Automatic Tool Changers

Tension Control

Web Guidance

Wire Winding

A typical 3 inch stroke GSM Series actuator used in a valve-modulating application can control position to +/- 0.5% and fully open or close in less than 200 mSec.

All-electric replacement for hydraulic cylinders improves throughput with servo control and lower maintenance for core-pull cylinders.

¹ Back drive force is nominal value only. Operating conditions can cause wide variations in back drive force. Exlar cannot assure that an actuator will or will not back drive.

DEFINITIONS:

Continuous Force: The linear force produced by the actuator at continuous motor torque.

Max Velocity: The linear velocity that the actuator will achieve at rated motor rpm.

Friction Torque (standard screw): Amount of torque required to move the actuator when not coupled to a load.

Friction Torque (preloaded screw): Amount of torque required to move the actuator when not coupled to a load.

Back Drive Force: Amount of axial force applied to the rod end of the actuator that will produce motion with no power applied to the actuator.

Min Stroke: Shortest available stroke length.

Max Stroke: Longest available stroke length.

C_a (Dynamic Load Rating): A design constant used when calculating the estimated travel life of the roller screw.

Inertia (zero stroke): Base inertia of an actuator with zero available stroke length.

Inertia Adder (per inch of stroke): Inertia per inch of stroke that must be added to the base (zero stroke) inertia to determine the total actuator inertia.

Weight (zero stroke): Base weight of an actuator with zero available stroke length.

Weight Adder (per inch of stroke): Weight adder per inch of stroke that must be added to the base (zero stroke) weight to determine the total actuator weight.

Test data derived using NEMA recommended aluminum heatsink 12" x 12" x 1/2" at 25°C

Specifications subject to change without notice.

Performance Curves

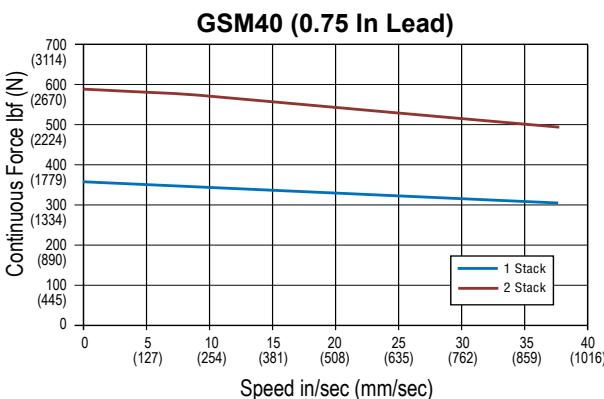

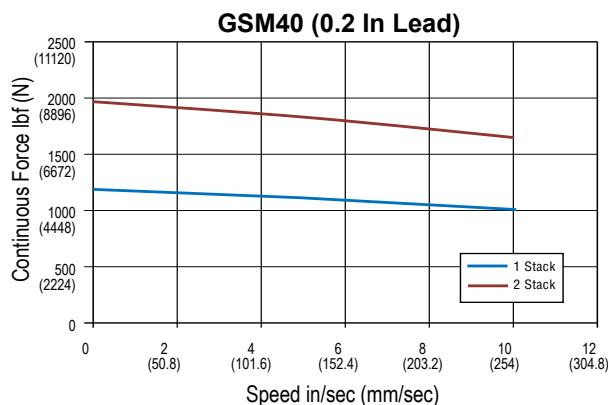

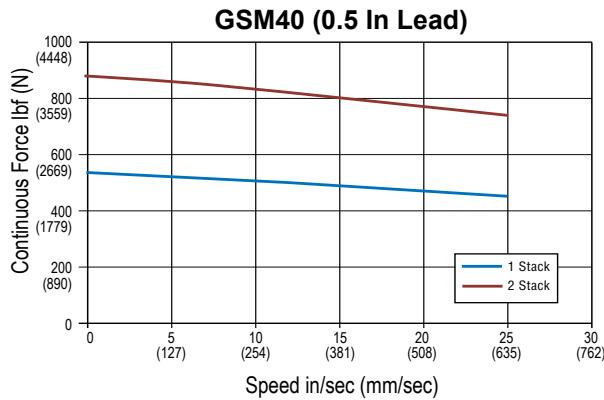

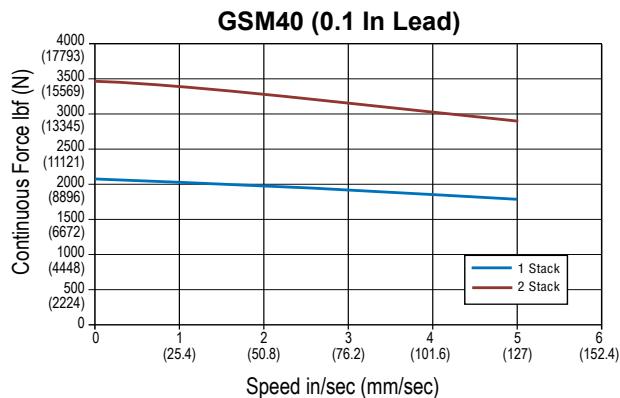

The below speed vs. force curves represent approximate continuous thrust ratings at indicated linear speed. Different types of servo amplifiers will offer varying motor torque and

actuator thrust. These values are at constant velocity and do not account for motor torque required for acceleration.

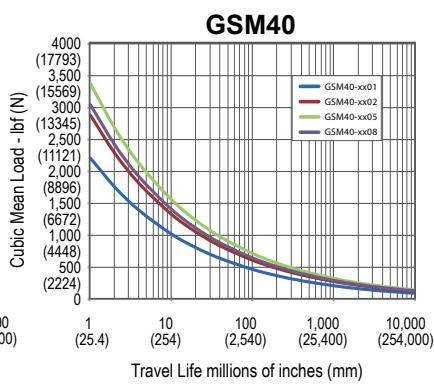

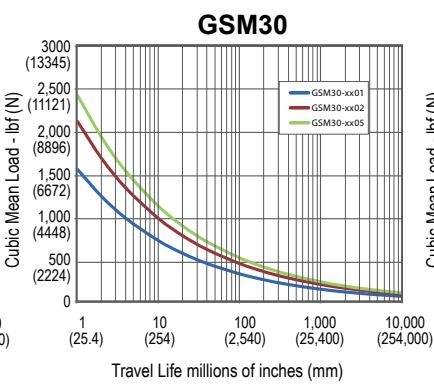

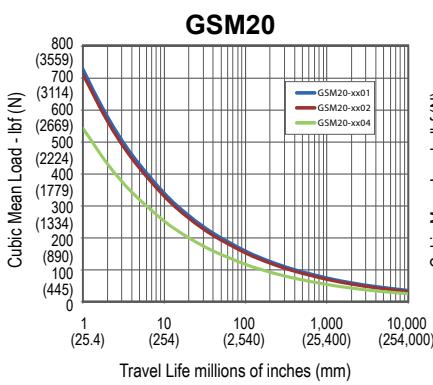

Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 1/4" on GSM20 and 10" x 10" x 3/8" on GSM30

GSM Series Integrated Motor/Actuator

Test data derived using NEMA recommended aluminum heatsink 12" x 12" x 1/2" on GSM40

Life Curves Estimated L₁₀ Travel Life

See page 17 for Life Curve Information.

If your application requires high force over a stroke length shorter than the length of the nut, please contact Exlar for derated life calculations. You may also download the article "Calculating Life Expectancy" at www.exlar.com.

Options

AR = External Anti-rotate Assembly

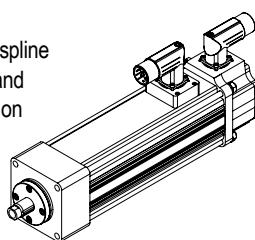

This option provides a rod and bushing to restrict the actuator rod from rotating when the load is not held by another method. Shorter actuators have single sided anti-rotation attachments. Longer lengths require attachments on both sides for proper operation. For AR dimensions, see page 30.

RB = Rear Electric Brake

This option provides an internal holding brake for the GSM Series actuators. The brake is spring activated and electrically released.

SR = Splined Main Rod

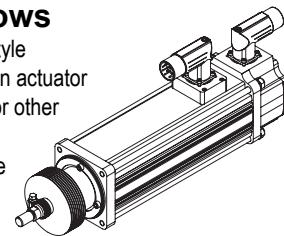

A ball spline shafting main rod with a ball spline nut that replaces the standard front seal and bushing assembly. This rod restricts rotation without the need for an external mechanism. The rod diameter will be the closest metric equivalent to our standard rod sizes. Since this option is NOT sealed, it is not suitable for environments in which contaminants may enter the actuator.

Note: Adding this option affects the overall length and mounting dimensions. Due to the reduced diameter of the splined main rod on GSX50 actuators, the standard A, F and B rod ends are not available. In this case, an "X" should be used in the rod end location. If not otherwise specified, an M24x2 male rod end will be used.

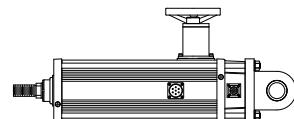

PB = Protective Bellows

This option provides an accordion style protective bellows to protect the main actuator rod from damage due to abrasives or other contaminants in the environment in which the actuator must survive. The standard material of this bellows is S2 Neoprene Coated Nylon, Sewn Construction. This standard bellows is rated for environmental temperatures of -40 to 250 degrees F. Longer strokes may require the main rod of the actuator to be extended beyond standard length. Not available with extended tie rod mounting option. Please contact your local sales representative.

HW = Manual Drive, Handwheel

This option provides a manual drive handwheel on the side of the actuator. The handwheel has an engage/disengage lever that is tied to an interrupt switch. Not available on GSM20. Also not available with holding brake unless application details have been discussed with your local sales representative.

L1, L2, L3 = Adjustable External Travel Switches

This option allows up to 3 external switches to be included with the GSM Series Actuator. These switches provide travel indication to the controller and are adjustable. See drawing on page 54. Must purchase external anti-rotate with this option.

GSM Series Integrated Motor/Actuator

Motor Speed

All Exlar T-LAM motors and actuators carry a standard motor speed designator (see chart). This is representative of the standard base speed of the motor for the selected bus voltage.

Designator	Base Speed	Actuator/Motor Series
-50	5000 rpm	GSM20
-30	3000 rpm	GSM30, GSM40
01-99	Special Speed, consult your local sales representative	

If the model number is created and the location for the motor speed designator is left blank, this is the base speed to which the motor will be manufactured. The model number can also be created including this standard speed designator.

Exlar also provides the flexibility to manufacture all of its T-LAM products with special base speeds to match your exact application requirements. This may be a higher than standard speed motor, or lower base speed than standard which will allow you to get the required torque at a speed optimized to your application and use the minimum amount of current from your amplifier.

The call out for a special speed is configured in the model number by using a two digit code from 01-99. This code represents the number, in hundreds, of RPM that is the base speed for the particular motor.

For example, a GSM30-0301-MFM-EM2-138-30 motor that normally has a 3000 RPM standard winding can be changed to a 3300 RPM winding by changing the -30 to a -33. Similarly, it can be changed to a 5000 RPM winding by changing the -30 to a -50.

Changing this speed designator changes the ratings of the motor; these must be obtained from your local sales representative. Also, it is not possible to produce every possible speed from -01 to -99 for each motor at each voltage so please contact your local sales representative for confirmation of the speed that is desired for the application.

Feedback

Due to the variability in size of some feedback devices, especially absolute feedback devices which are often very large relative to the size of the actuator motor, the actual size of the actuator may differ in length and width from these drawings for feedback types other than standard resolvers and standard encoders. Please consult your local sales representative. In the event that you order an actuator that differs from these standard dimensions, you will be sent a drawing of the final configuration of your actuator for approval.

Motor Stators

GSM motor options are described with a 3 digit code. The first digit calls out the stack length, the second digit signifies the rated bus voltage, and the third digit identifies the number of poles of the motor. Refer to the mechanical/electrical specifications for motor torque and actuator rated force.

118	1 stack	115 Vrms	8 Pole	Class 180 H
138		230 Vrms		
158		400 Vrms		
168		460 Vrms		
218	2 stack	115 Vrms	8 Pole	Class 180 H
238		230 Vrms		
258		400 Vrms		
268		460 Vrms		

Note: 3 stack not available in GSM Series

* Low voltage stators may be limited to less than catalog rated torque and/or speed. Please contact your local sales representative when ordering this option.

Rod End Attachments

Rear Clevis Pin
Rod Eye

Spherical Rod Eye
Rod Clevis

See drawings on pages 53-54.
Attachments ordered separate from actuator.

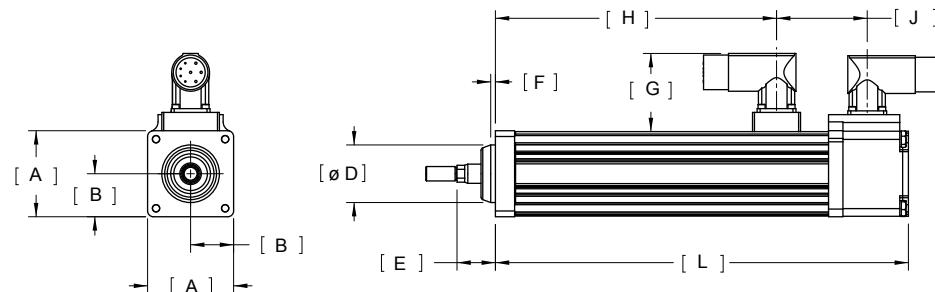

Housing Options

P5 = IP65S Sealing Option

Please read full description of IP Ratings in the engineering reference in the back of the book.

* Dimensions for Anti rotate option can be seen on page 30.

The external limit switch option (requires anti-rotate option) provides the user with 1, 2, or 3 externally mounted adjustable switches for use as the end-of-travel limit switches or home position sensors.

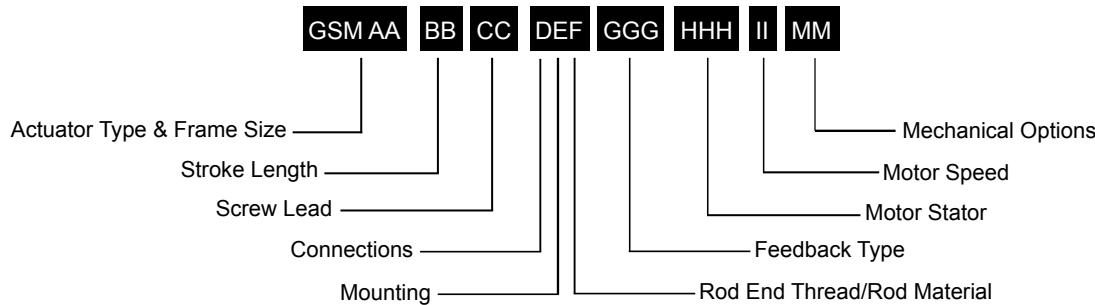

The number of switches desired is selected by ordering the L1, L2, or L3 option, in which 1, 2, or 3 switches will be provided, respectively.

The switches are 9-30 VDC powered, PNP output, with either normally open or normally closed logic operation depending on the switch configuration ordered. Switches are supplied with 1 meter of 3-wire embedded cable. Below is a chart that shows which logic operation will be provided for each switch, based on the option that is ordered.

Option	SW1	SW2	SW3
L1	Not Supplied	Normally Open	Not Supplied
L2	Normally Closed	Not Supplied	Normally Closed
L3	Normally Closed	Normally Open	Normally Closed

Switch Type	Exlar Part Number	Turck Part Number
Normally Closed Switch	43404	BIM-UNT-RP6X
Normally Open Switch	43403	BIM-UNT-AP6X

Pre-sale drawings and models are representative and are subject to change. Certified drawings and models are available for a fee. Consult your local Exlar representative for details.

Commonly Ordered Options Shown in BOLD

AA = GSM Actuator Size (nominal)

20 = 2 in (60 mm) frame

30 = 3 in (80 mm) frame

40 = 4 in (100 mm) frame

BB = Stroke Length

03 = 3 in (76 mm) **GSM20** and **GSM30**

04 = 4 in (102 mm) **GSM40**

06 = 6 in (152 mm) **all models**; **5.9 in (150 mm) GSM30**

08 = 8 in (203 mm) **GSM40**

10 = 10 in (254 mm) **GSM20, GSM30 and GSM40**

12 = 12 in (305 mm) **GSM20, GSM30 and GSM40**

18 = 18 in (457 mm) **GSM30 and GSM40**

CC = Lead

01 = 0.1 in (2.54 mm) **(all models)**

02 = 0.2 in (5.08 mm) **(all models)**

04 = 0.4 in (10.16 mm) **(GSM20)**

05 = 0.5 in (12.7 mm) (GSM30 and GSM40)

08 = 0.75 in (19.05 mm) **(GSM40)**³

D = Connections

I = Exlar standard M23 style

M = Manufacturer's connector¹

J = Embedded leads with "I" plug, 3 ft. standard

E = Mounting

C = Rear clevis

F = Front flange

R = Rear flange

D = Double side mount¹¹

T = Side trunnion

E = Extended tie rods

K = Metric double side mount¹¹

Q = Metric side trunnion

M = Metric extended tie rods

G = Metric rear clevis

F = Rod End Thread / Rod Material

M = Male, US standard thread

A = Male, metric thread

F = Female, US standard thread

B = Female, metric thread

W = Male, US standard thread SS¹⁰

R = Male metric thread SS¹⁰

V = Female, US standard thread SS¹⁰

L = Female, metric thread SS¹⁰

GGG = Feedback Type

See page 207 for detailed information.

HHH = Motor Stator² – All 8 Pole⁸

118 = 1 stack, 115 Vrms

138 = 1 stack, 230 Vrms

158 = 1 stack, 400 Vrms

168 = 1 stack, 460 Vrms

218 = 2 stack, 115 Vrms

258 = 2 stack, 230 Vrms

238 = 2 stack, 400 Vrms

268 = 2 stack, 460 Vrms

II = Motor Speed

30 = 3000 rpm, **GSM30, GSM40**

50 = 5000 rpm, **GSM20**

MM = Mechanical Options¹²

AR = External anti-rotate⁷

HW = Manual drive, Handwheel with interlock switch^{5,9}

PB = Protective bellows⁶

SR = Splined main rod

RB = Rear brake

L1/L2/L3 = External limit switch⁴

P5 = IP65S sealing option¹³

NOTES:

1. Available as described in Feedback Types.

2. Stator voltage and pole options allow for catalog rated performance at varying amplifier bus voltages and pole configuration requirements.

3. 0.75 lead not available over 12 inch stroke

4. Requires AR option

5. Not available on **GSM20**.

6. Not available with extended tie rod mounting option.

7. A second anti-rotate arm is used on **GSM 20, 30 & 40** for 10 inch and longer stroke.

8. See page 48 for optimized stators.

9. N/A with holding brake unless application details are discussed with your local sales representative.

10. Consult with your local sales representative when ordering splined stainless steel main rod.

11. Anti-rotate with D or K mounting N/A on 10 inch or longer stroke.

12. For extended temperature operation consult factory for model number.

13. Not available with splined main rod option

For cables and accessories, see page 202.

For options or specials not listed above or for extended temperature operation, please contact Exlar

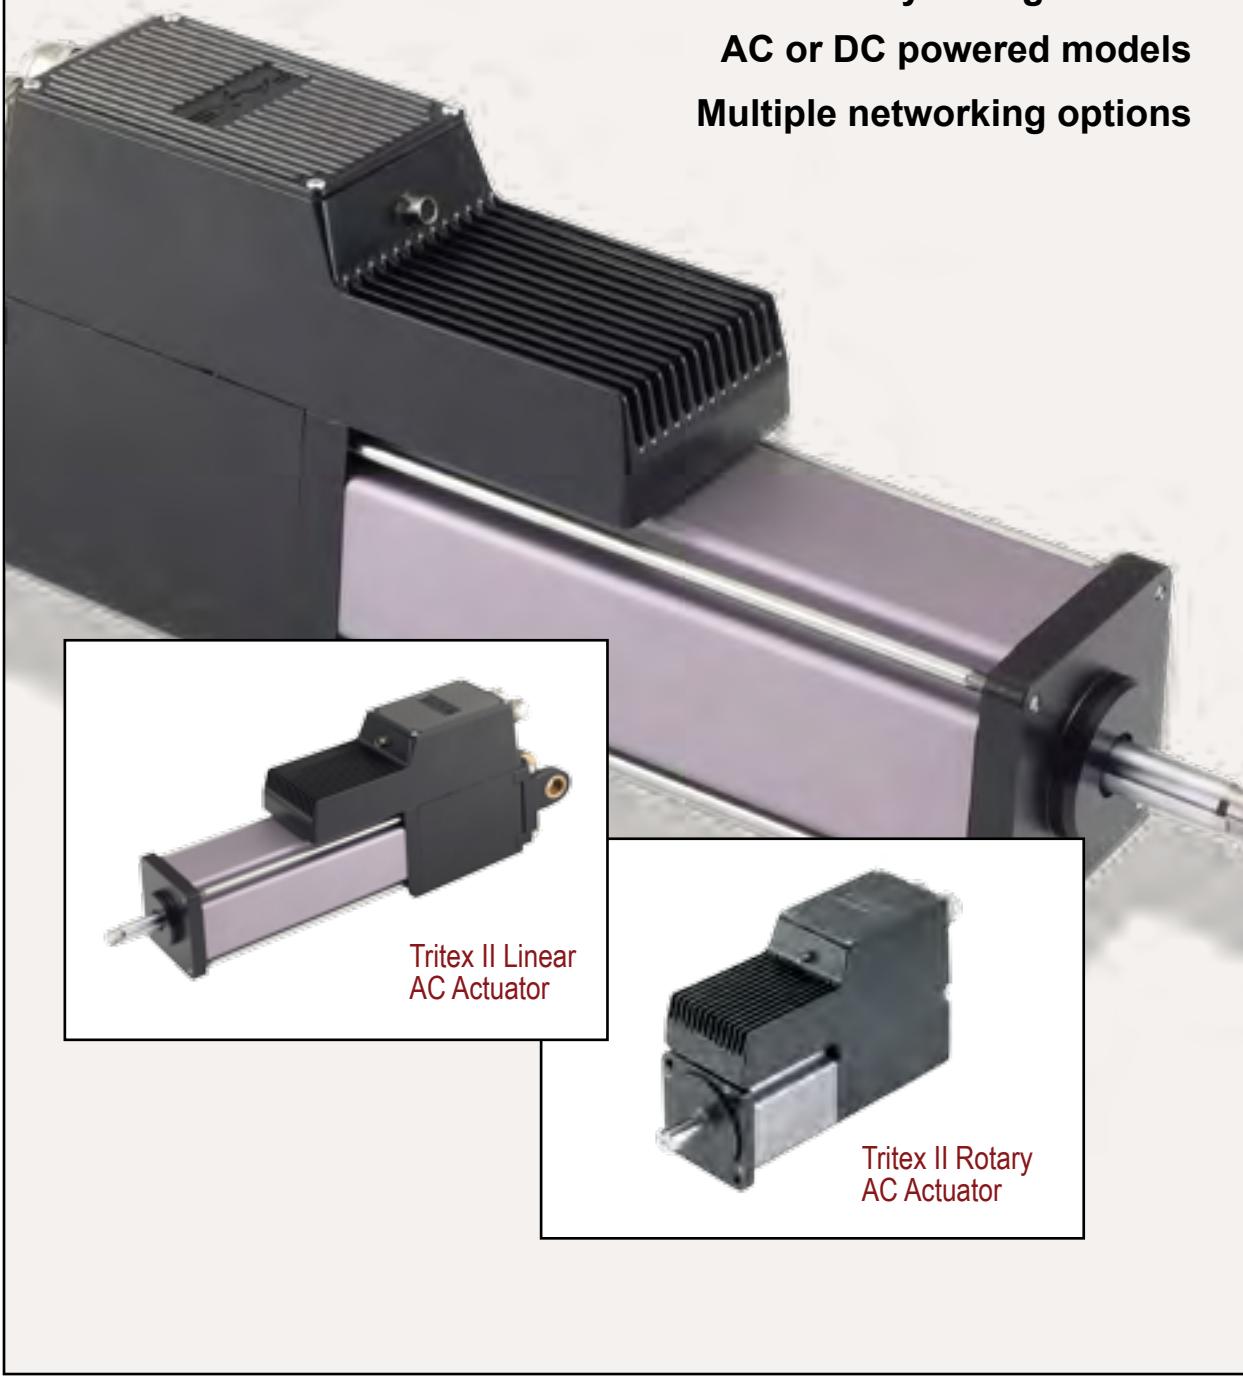

TRITEX II™ SERIES

FULLY INTEGRATED SERVO DRIVE/MOTOR/ACTUATOR

Linear or Rotary configurations

AC or DC powered models

Multiple networking options

Tritex II Linear
AC Actuator

Tritex II Rotary
AC Actuator

Tritex™ Series

Fully Integrated Drive/Motor/Actuator

By combining the latest electronic power technology with advanced thermal management modeling technology, Exlar® has set a new benchmark for electric actuator performance versus size. Tritex II actuators now integrate an AC or DC powered servo drive, digital position controller, brushless motor and linear or rotary actuator in one elegant, compact, sealed package. Now you can distribute motion control and resolve your application challenges with one integrated device. Simply connect power, I/O, communications and go!

Dramatically Reduce Space Requirements

Tritex II actuators are the highest power density, smallest footprint servo drive devices on the market. Finally, you can incorporate a fully electronic solution in the space of your existing hydraulic or pneumatic cylinder. You can also eliminate troublesome ball screw actuators or bulky servo gear reducers. And the space previously consumed by panel mount servo drives and motion controllers is no longer needed. Tritex II actuators may also reduce the size of your machine design while significantly improving reliability.

Reduce Costs

Now you can eliminate the labor costs for mounting and wiring panels because the Tritex II houses the servo drive, digital positioner, and actuator in one convenient package. Cable costs are also significantly reduced by eliminating the need for expensive, high-maintenance specialty servo cables. All that is required is an economical standard AC or DC power cord, and standard communication cable for digital and analog I/O.

These actuators also eliminate the issues associated with power signals and feedback signals traveling long distances from servo drive to servo motor. With the Tritex II, the servo drive and motor are always integrated in the same housing.

Flexible Communications

Multiple feedback types, including absolute feedback, allow you to select the system that is best-suited for your application. Digital and analog I/O, plus popular communication networks, such as Modbus TCP, Ethernet/IP, PROFINET IO, and CANopen, allow the Tritex II to become an integral part of your control architecture or machine control processes.

Improves Power, Performance, and Reliability

Tritex II actuators give you unrivaled power, performance, and reliability. No longer are you limited to trivial amounts of force or speeds so slow that many motion applications are not possible.

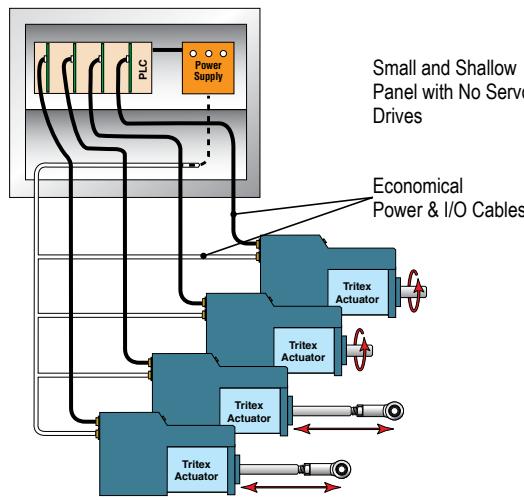

Tritex II AC Actuator

- Continuous force to 3225 lbf (14kN)
- Peak force to 5400 lbf (24kN)
- Speed to 33 in/sec (800 mm/sec)
- 1.5 kW servo amplifier
- Temperature operation range -40°C to +65°C
- AC power 100V – 240V, +/-10%

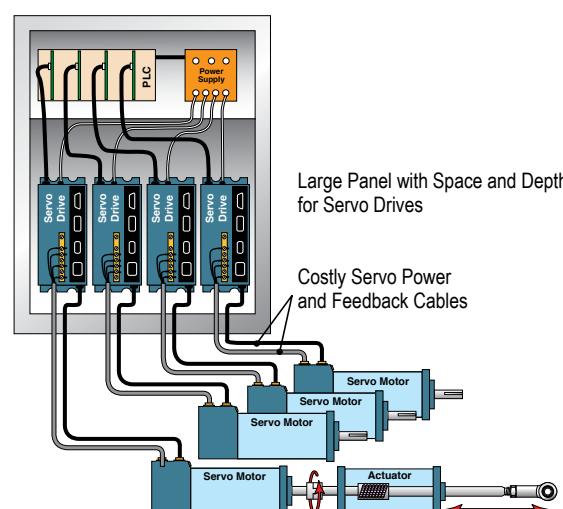

Tritex II DC Actuator

- Continuous force to 872 lbf (4kN)
- Peak force to 1190 lbf (5kN)
- Speed to 33 in/sec (800 mm/sec)
- 750W servo amplifier
- Temperature operation range -40°C to +65°C
- DC power 12-48 VDC nominal

Tritex II System

Alternative Systems

Tritex II Overview

Linear Applications

Tritex II linear actuators employ a superior inverted roller screw mechanism for converting rotary motion to highly robust and long-life linear motion. These characteristics enable the Tritex actuator to solve applications that previously required pneumatic or hydraulic cylinders. No additional mechanisms (such as acme or ball screws) are necessary to convert the actuator's rotary power into linear motion in order to move the load.

Ideal for mobile and remote applications using DC power sources, the Tritex II DC actuators have the power needed to perform. The simple to configure, yet robust interface software allows either the AC or DC Tritex II actuators to perform nearly any motion control application. The Tritex II linear actuator can be programmed to follow an analog command signal, making it ideal for controlling valves and dampers in process control applications or adjustment mechanisms on mobile equipment.

Longer Stroke Lengths

If your application requires a stroke length greater than the 18 inches available with Tritex II linear units, consider mounting a rotary Tritex II actuator to an Exlar universal actuator. This combination extends stroke length up to 40 inches. Please contact Exlar for more details.

Tritex II Models

Tritex II AC Models

- T2M standard mechanical capacity actuator, 75, 90, and 115 mm
- T2X high mechanical capacity actuator, 75, 90, and 115 mm
- R2M rotary motor, 75, 90, and 115 mm
- R2G rotary gearmotor, 75, 90, and 115 mm

Tritex II DC Models

- TDM standard mechanical capacity actuator, 60, and 75 mm
- TDX high mechanical capacity actuator, 60 and 75 mm
- RDM rotary motor, 60, 75, and 90 mm
- RDG rotary gearmotor, 60, 75, and 90 mm

Feedback Types (All Models)

- Analog Hall w/1000 count resolution
- Incremental encoder with 8192 count resolution
- Absolute Feedback (analog hall with multi-turn, battery backup)

Communications & I/O

The I/O count and type varies with each actuator model and option selected. Please see page 69 for Tritex II AC and page 96 for Tritex II DC models.

Standard Communications (All Models):

- 1 RS485 port, Modbus RTU, opto-isolated for programming, controlling and monitoring

Rotary Applications

Tritex II rotary motors and gearmotors provide high response and precise control of a rotatable shaft, similar to that found in any electric motor. The difference is that with Tritex II you can program (via your PC) the rotational speed and position of the output shaft in response to external commands. For example, the motor can be commanded to rotate at a controlled velocity and to precisely stop at a preprogrammed position. You can also program the unit to run at a preset velocity until a switch input is received or a preprogrammed torque level is produced against a load. Alternatively, the rotary Tritex II actuators can be set up to follow an analog signal—either voltage or current—representing your choice of torque, velocity, or position.

Signals for initiating the preprogrammed velocity and position commands come from optically isolated inputs or directly via network communications. Likewise, isolated output commands of the status and events enable precise coordination with your system controls or machine operator.

Optional Internal Gear Reducer

If your application requires greater torque and less speed than the base unit provides, the Tritex II is available with an integral servo grade planetary gear reducer. Gear ratios of 4:1 to 100:1 allow the power of Tritex II to be applied over a broad range of torque requirements.

Tritex II rotary motor with connectors

Tritex II linear actuator with customer-supplied cable glands ports

Tritex II Series Operation

The Tritex II Series actuators can operate in one of five different motion-producing modes. These modes solve an endless variety of applications in industrial automation, medical equipment, fastening and joining, blow molding, injection molding, testing, food processing, and more.

Programmed functions are stored in the Tritex II non-volatile memory. A standard RS485 serial interface allows control, programming, and monitoring of all aspects of the motor or actuator as it performs your application. Optional communications protocols are available.

Tritex Option Boards

- Option boards offer adding functionality to the base Tritex II actuators
 - Terminal board for customer I/O
 - Isolated 4-20mA analog input and output
 - Customer specific
- Communication buses
 - EtherNet/IP
 - Modbus TCP
 - PROFINET IO
 - CANopen
 - Ethercat

Connectivity

- Internal terminals accessible through removable cover (select models)
- Threaded ports for cable glands (select models)
- Optional connectors
 - M23 Power - M23/M16 I/O
 - M8 connector for RS485
 - M12 connector for EtherNet options
- Custom connection options
- Embedded leads (select models)

Operating Modes

1. Move to a position (or switch)

The Tritex II Series actuators allow you to execute up to 16 programmed positions or distances. You may also use a limit switch or other input device as the end condition of a move. This combination of index flexibility provides a simple solution for point-to-point indexing.

2. Move to a preset force or torque

The Tritex II Series allows you to terminate your move upon the achievement of a programmed torque or force. This is an ideal mode for pressing and clamping applications.

3. Position proportional to an analog signal

Ideal for process control solutions, the Tritex II Series provides the functionality to position a control valve by following an analog input signal. Therefore, it delivers precise valve control — which cannot be achieved by other electric, hydraulic, or pneumatic actuators.

4. Velocity proportional to an analog signal

Tritex II actuators offer you the capability to control velocity with an analog signal. This is particularly useful with Tritex II rotary motors which offer precise control of the speed of any process or operation.

5. Force/torque proportional to analog signal

Perfect for pressing and torquing applications, you can control torque with an analog input while in torque mode.

Selectable Input Functions

- Enable • Execute Move (0-15) • Dedicated Position • Jog+
- Jog- • Jog Fast • Home • Extend Switch • Retract Switch
- Home Switch • Teach Enable • Teach Move (1-16)
- Select Move • Stop • Hold • Reset Faults
- Alternate Mode (allows you to switch between 2 operating modes)

Selectable Output Functions

- Enabled • Homed • Ready (Enabled and Homed)
- Fault • Warning • Fault or Warning Active
- Move (0-15) in Progress • Homing • Jogging
- Jogging+ • Jogging- • Motion • In Position
- At Home Position • At Move (0-15) • Position
- Stopped • Holding • In Current Limit • In Current Fold Back
- Above Rated Current • Home

Tritex II Overview

Expert User Interface

Expert, the Tritex II user interface software, provides you with a simple way to select all aspects of configuration and control required to set up and operate a Tritex II actuator. Easy-to-use tabbed pages provide access to input all of the parameters necessary to successfully configure your motion application. 'Application' files give you a convenient way to store and redistribute configurations amongst multiple computers, and 'Drive' files allow the same configuration to be distributed to multiple Tritex II actuators. Motion setup, homing, teach mode, tuning parameters, jogging, I/O configurations, and local control are all accomplished with ease using Expert software.

Protocol Options

The standard communication protocol for Tritex is an RS485 connection using Modbus RTU. The Modbus protocol provides a simple and robust method to connect industrial electronic devices on the same network. The Expert software acts as a Modbus Master and the Tritex II acts as the Slave device, only responding to requests commanded through the software. The Expert software allows full access to commissioning, configuring, monitoring, and controlling the Tritex II.

In addition the following protocol options are available by selecting the communication option boards. Exlar requires initial commissioning of a Tritex II actuator to be performed with the Modbus protocol.

Modbus TCP

Modbus TCP couples Modbus communication structure from Modbus RTU with EtherNet connectivity. The Modbus TCP option is fully supported by the Expert software and offers seamless

commissioning, configuring, monitoring and controlling the Tritex II. A Modbus mapping table allows you to map all Communication protocol DSP301 is supported as well as DSP 402 supporting Profile Torque, Profile Velocity, Profile Position and Homing. Setup on the system is most easily achieved with the Expert software using the RS485 port. of the parameters you wish to read and modify into a register bank of up to 100 registers. This allows a PLC program to perform a single read operation and a single write operation to all the parameters.

EtherNet/IP

EtherNet/IP allows you to change, monitor, and control the Tritex II through implicit or explicit messaging initiated from your Rockwell PLC. Tritex parameters are set up through the Expert software using a Tritex II parameter to EtherNet/IP parameter mapping table. Up to 100 input, and 100 output 16 bit registers can be mapped to Tritex II parameters.

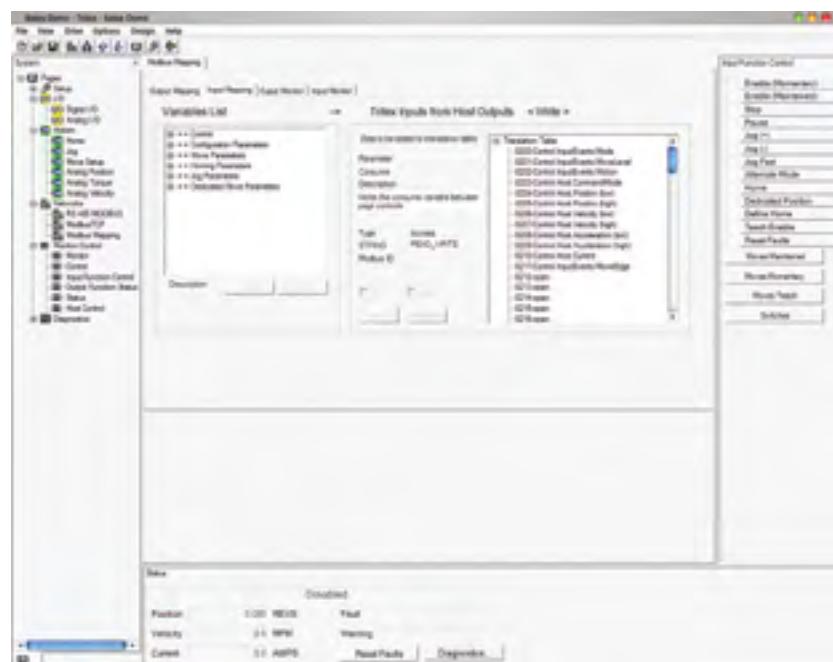

PROFINET IO

PROFINET IO allows you to change, monitor and control the Tritex II from your Siemens PLC. Tritex parameters are set up through the Expert software using a Tritex II parameter to PROFINET IO parameter mapping table. Up to 100 input and 100 output, 16 bit registers can be mapped to Tritex II parameters.

CANopen

The Tritex II with the CANopen network is intended to perform as a Slave, receiving commands from a CANopen Master. It does not have all the features of a stand-alone indexer, like other Tritex models. CANopen Communication protocol DSP 301 is supported as well as DSP 402 for Profile Torque, Profile Velocity, Profile Position, and Homing. Setup is most easily achieved with the Expert software using the RS485 port.

Modbus Mapping Screen

Motion Setup

Exlar configuration provides several templates for various applications. These can serve as your configuration, or as a starting point for your configuration. You can also begin by selecting configuration details specific to your application. At the click of a button, you can configure a move to position, move to switch, or move to force motion. Tritex II products offer absolute and incremental motion, as well as moves ending on a condition, such as a specific force or torque.

Control Page

The Expert control page gives you the ability to initiate all motion functions from one simple screen. This screen provides you with very easy system start-up and testing, without all the inconvenience of machine wiring.

The control page offers the capability to enable and disable the drive, and perform fast and slow jogs. This gives you the ability to verify motion, before needing any I/O wiring.

Monitoring and Diagnostics

All input functions can be monitored and activated from the Expert monitor page, and all output functions can be monitored. Critical fault and status data is available as a separate page, or as a fixed window on the bottom of each page of the software.

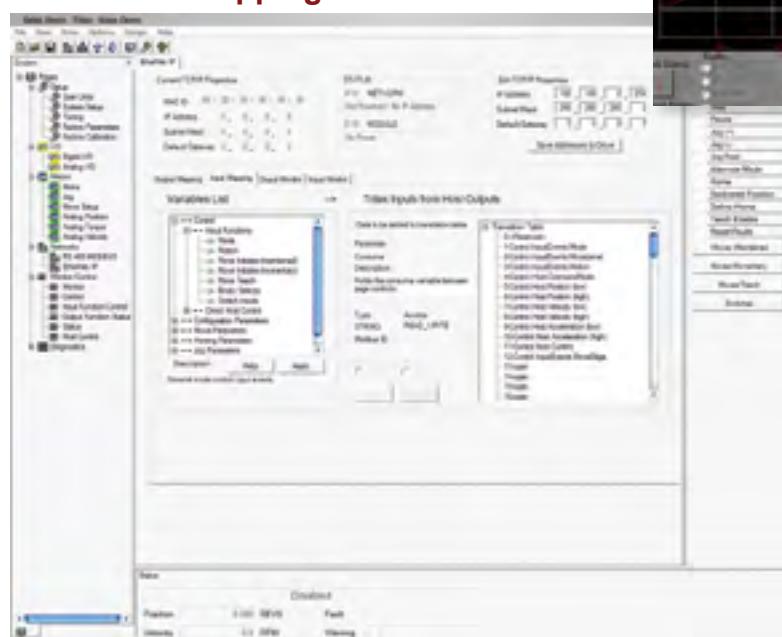

Configuring I/O

A drop down menu allows all I/O to be set up in a matter of minutes. Inputs can be configured to be maintained or momentary, depending on the application requirements. Input and output logic can be inverted with a single click.

Scope

The Expert Software includes a four-channel digital oscilloscope feature.

EtherNet IP Mapping Screen

You can select up to four Tritex drive parameters to be monitored simultaneously.

For high speed requirements, the data can be captured in the drive's memory at an adjustable rate, down to 100 micro seconds, and then uploaded for plotting. The plots can be saved or printed, and the captured data can be saved as a comma separated file for further analysis with Excel.

Homing

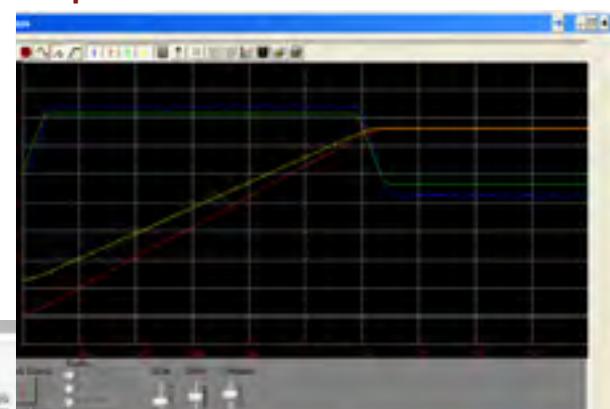

You can home to an input, by using a proximity or limit switch, or home to a specific force or torque.

Homing to a force or torque is ideal for setting up applications that require motion referenced to a hard stop, like the closed position of a valve, or the final position of a press.

Teach Mode

In this mode, you can jog the actuator to the desired position, and activate an input. Alternatively, you can click a button in the Expert software and the current position of the actuator becomes the defined distance or absolute position associated with a particular move command.

Scope

Tritex II Overview

Process Control Functionality

Precise valve and damper control are perfect applications for Tritex II actuators. They outperform other electric, hydraulic and pneumatic actuators by providing small hysteresis and dead band, quick response to small signal changes, and stable dynamic responses. Fully programmable to follow an analog or digital signal representing either position or force, the Tritex II linear actuator is well suited for control valve applications with thrust requirements up to 3225 lbf or rotary torque applications up to 95 lbf-in continuous.

The Tritex II Rotary actuators are also ideal for directly operating quarter-turn valves. Gear ratios of 4:1 to 100:1 allow the power of Tritex II to be applied to a broad range of applications, providing high turndown without loss of accuracy.

Additionally, Tritex II actuators can be mounted on any valve from any manufacturer giving you maximum flexibility.

Valve Software

The valve software is simple to use and features a teach mode for foolproof stroke configuration. A programmable valve cut off position enables a firm valve seat on either new valves or retrofitted valves. Several diagnostics and auxiliary I/O options are also available.

Class I Division 2 Rating

Exlar Tritex II actuators are available for applications requiring CSA Class I Division 2 certification. Ordering a standard I/O interconnect with or without 4-20 mA Analog I/O, and the N option for the NPT port will provide you with a Class I Division 2 rated product.

Benefits for Process Control Applications

Extreme Accuracy

The Exlar actuators stroke the valve based on position, not air or oil pressure. Accuracy and repeatability are better than 0.1%.

100% Duty Cycle

A roller screw provides a unique way of converting rotary motor motion to a linear force, and offers full modulation capability. Life is measured in hundreds of million strokes vs. thousands like typical electric actuators.

Built in Positioner

Tritex II actuators include a built in positioner with a 4-20 mA or digital signal to tell you the exact stroke position. An analog output is also available.

Flexibility

These actuators include digital I/O and analog control. This provides the user with options for additional control such as emergency stop, +/- jog, or various diagnostic conditions.

Low Power Consumption

The Tritex II actuator only uses the current needed for a given force. This extreme efficiency makes it suitable for use with solar panels and batteries.

Fast Response and Stroke Speeds

Most other electric actuators are known for being slow—a major disadvantage. Tritex II response rate is measured in milliseconds. Stroke speeds can be up to 33 in/sec.

Hydraulic Replacement

Tritex actuators have the same capabilities as a hydraulic equivalent, but without the cost or maintenance issues. High force, fast speeds and precise movements make it a superior substitute for hydraulic applications.

Absolute Feedback

The absolute feedback option gives the actuator memory after teaching the valve limits. So upon power loss, the battery backup will maintain the valve limits.

Manual Override

Two options are available. The hand wheel option gives you a manual engagement switch that can be used to disable the power to the actuator. The side drive option allows emergency operation in a power down condition, using a standard socket wrench.

Diagnostics

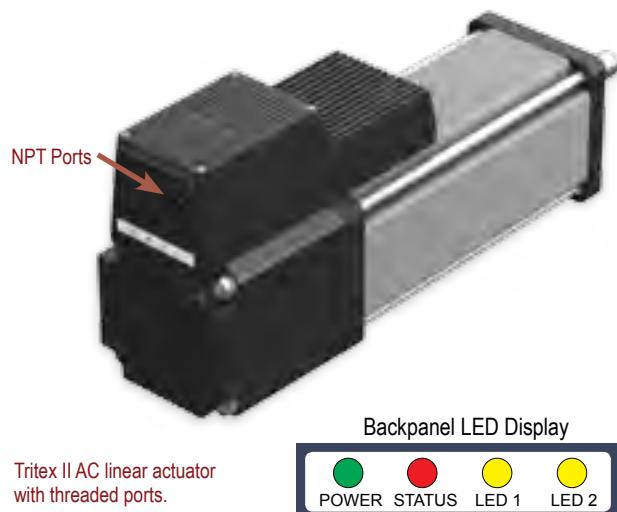

All inputs and outputs can be monitored including position, temperature, current, and many more. An oscilloscope feature allows you to select up to four parameters to be monitored simultaneously. The data can be captured in the drive's memory at an adjustable rate, down to 100 micro sec, and then uploaded for plotting.

Tritex II Agency Approval

If your application requires CSA Class I, Division 2 Certification, please order the "N" connection option for the NPT port. This, in combination with one of the following I/O option boards, will provide Class I, Division 2 Certification:

- SIO • EIN • TCN • IA4 • PIN • CON

Shown below are additional agency approvals applied to Tritex II Actuators.

Tritex II DC Standards/Agency Approvals

Agency/Standard	Tritex II Models/Options
CE, EMC EN61800-3	All models
CSA 139	All models, when supply voltage is 24 VDC or less
CSA Class I, Div 2, Groups A, B, C, D	75 and 90 mm frames require NPT connection option (N/A with 60 mm frame)
IP Rating	TDM = IP54S, TDX = IP66S, RDM/G = IP66
Vibration Rating	IEC 60068-2-64 random vibration standard, 5g rms, 50 to 500 Hz.
ODVA	EIP
PROFINET	PIO

Tritex II AC Standards/Agency Approvals

Agency/Standard	Tritex II Models/Options
CE, EMC EN61800-3, Safety EN 61800-5-1	All options
CSA 139	All options
CSA Class I, Div 2, Groups A, B, C, D	Requires NPT connection option. Option Board EIN, PIN, TCN and CON, SIO, or IA4
UL 508 C, Type 4 Enclosure T2M090/R2M090 T2M115/R2M115	Requires NPT connection option. Option Board EIN, PIN, TCN and CON, SIO, or IA4
IP Rating	T2M/TDM = IP54S, T2X/TDX = IP65S, T2M/X075, TDM/X075 = IP66S R2M/R2G/RDM/RDG = IP65S, R2M/G075, RDM/G075 = IP66S
Vibration Rating	IEC 61800-5-1 safely standard for drives. 1g peak, up to 150 Hz for <2 hrs. IEC 60068-2-64 random vibration standard, 2.5 g rms, 5 to 500 Hz.
ODVA	EIP

Up-to-date certifications for all products shown on www.exlar.com.

Tritex II AC

[Return to table of contents](#)

No Compromising on Power, Performance or Reliability

With forces to approximately 3,225 lbf (14 kN) continuous and 5,400 lbf peak (24 kN), and speeds to 33 in/sec (800 mm/sec), the AC Tritex II linear actuators also offer a benefit that no other integrated product offers: POWER! No longer are you limited to trivial amounts of force, or speeds so slow that many motion applications are not possible. And the Tritex II with AC power electronics operates with maximum reliability over a broad range of ambient temperatures: -40°C to +65°C. The AC powered Tritex II actuators contain a 1.5 kW servo amplifier and a very capable motion controller. With standard features such as analog following for position, compound moves, move chaining, and individual force/torque control for each move, the Tritex II Series is the ideal solution for most motion applications.

Tritex II Models

- T2M standard mechanical capacity actuator, 75, 90, and 115 mm
- T2X high mechanical capacity actuator
- R2M rotary motor
- R2G rotary gearmotor

Power Requirements

- AC Power 100V - 240V, +/- 10%, single phase
- Built-in AC line filter
- Connections for external braking resistor

Feedback Types

- Analog Hall with 1000 count/motor rev resolution
- Incremental encoder with 8192 count resolution
- Absolute Feedback (analog hall with multi-turn, battery backup)

Connectivity

- Internal terminals accessible through removable cover
- Threaded ports for cable glands
- Optional connectors:
 - M23 Power
 - M16 I/O (M23 on 75 mm)
- M8 connector for RS485
- M12 connector for Ethernet options
- Custom connection options

Tritex II AC Linear Actuator (90 mm)

Technical Characteristics	
Frame Sizes in (mm)	2.9 (75), 3.5 (90), 4.5(115)

**Consult Exlar for extended temperature operation.

Communications & I/O

Digital Inputs:

10 to 30 VDC Opto-isolated

Digital outputs:

30 VDC maximum

100 mA continuous output Isolated

Analog Input AC:

0-10V or +/-10V

0-10V mode, 12 bit resolution

+/-10V mode, 12 bit resolution on 90/115, 13 bit resolution on 75 assignable to Position, Velocity, Torque, or Velocity Override commands.

Analog Output AC:

0-10V

12 bit resolution on 90/115, 11 bit resolution on 75

IA 4 option:

4-20 mA input

16 bit resolution Isolated

Assignable to Position, Velocity, or Torque command

4-20 mA output

12 bit resolution

Assignable to Position, Velocity, Current, Temperature, etc

Standard Communications:

- 1 RS485 port, Modbus RTU, opto-isolated for programming, controlling and monitoring

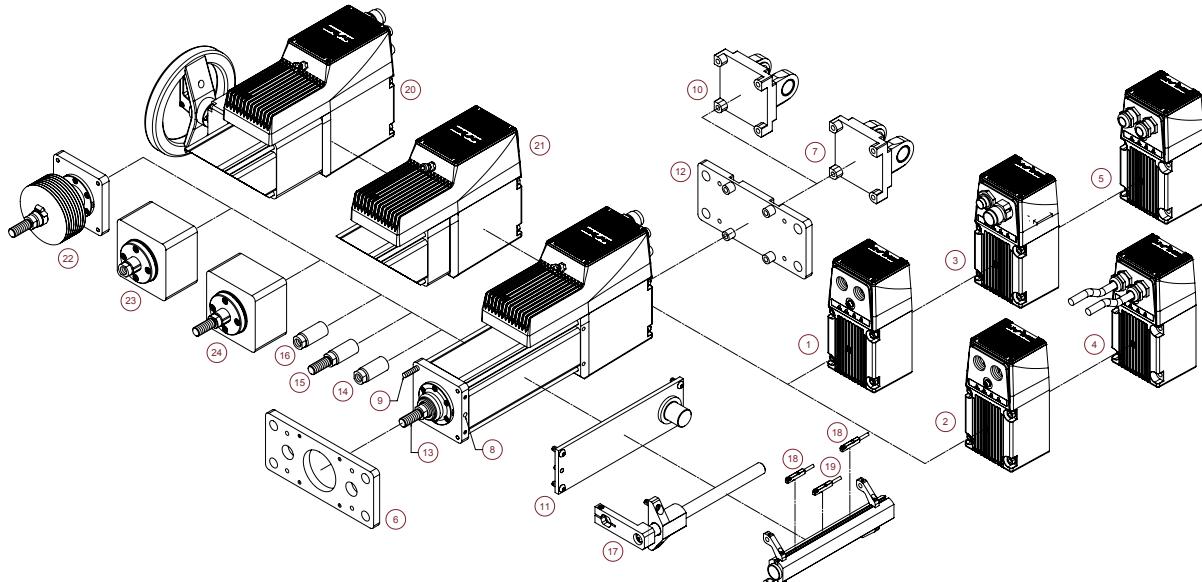

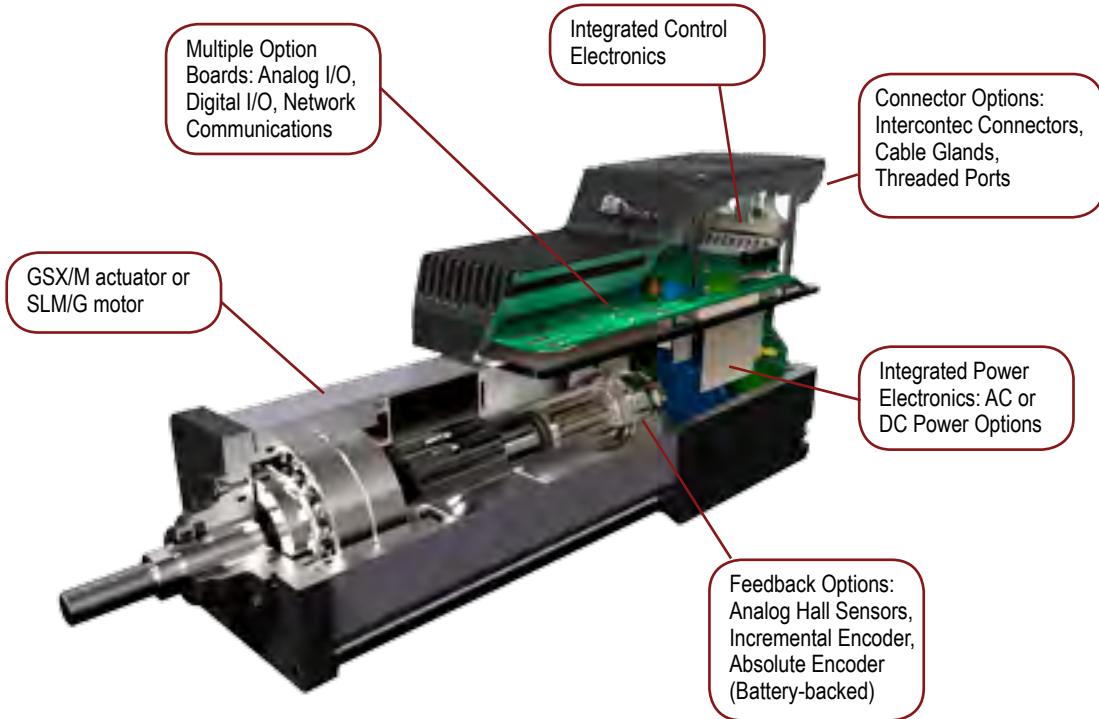

The IO count and type vary with the actuator model and option module selected.

All models include isolated digital IO, and an isolated RS485 communication port when using Modbus RTU protocol.

T2M/X075	0.50 Amps @ 24 VDC
T2M/X090	0.67 Amps @ 24 VDC
T2M/X115	0.75 Amps @ 24 VDC

DEFINITIONS:**Continuous Force:** The linear force produced by the actuator at continuous motor torque.**Peak Force:** The linear force produced by the actuator at peak motor torque.**Max Speed:** The maximum rated speed produced by the actuator at rated voltage.**C_a (Dynamic Load Rating):** A design constant used in calculating the estimated travel life of the roller screw.

Estimated Service Life

The L_{10} expected life of a roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained roller screws are expected to meet or exceed. For higher than 90% reliability, the result should be multiplied by the following factors: 95% x 0.62; 96% x 0.53; 97% x 0.44; 98% x 0.33; 99% x 0.21. This is not a guarantee; these charts should be used for estimation purposes only.

The underlying formula that defines this value is:

Travel life in millions of inches, where:

$$L_{10} = \left(\frac{C_a}{F_{cml}} \right)^3 \times \ell$$

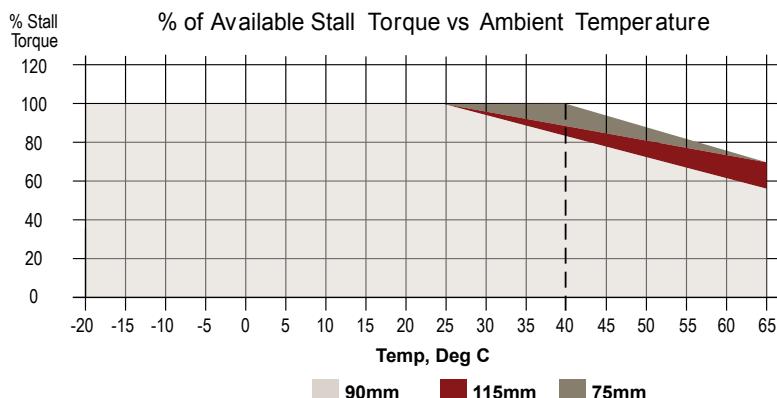

C_a = Dynamic load rating (lbf)
 F_{cml} = Cubic mean applied load (lbf)
 ℓ = Roller screw lead (inches)

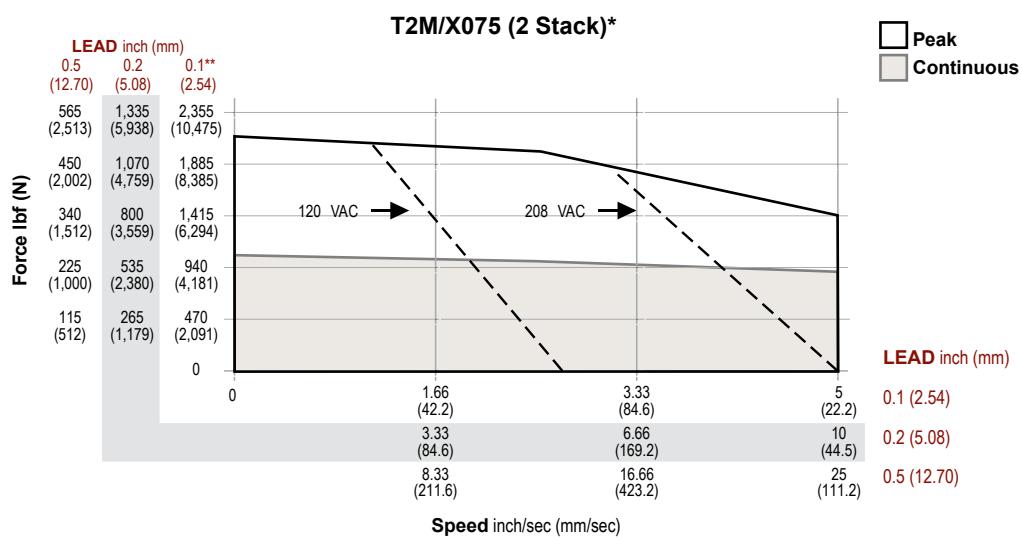

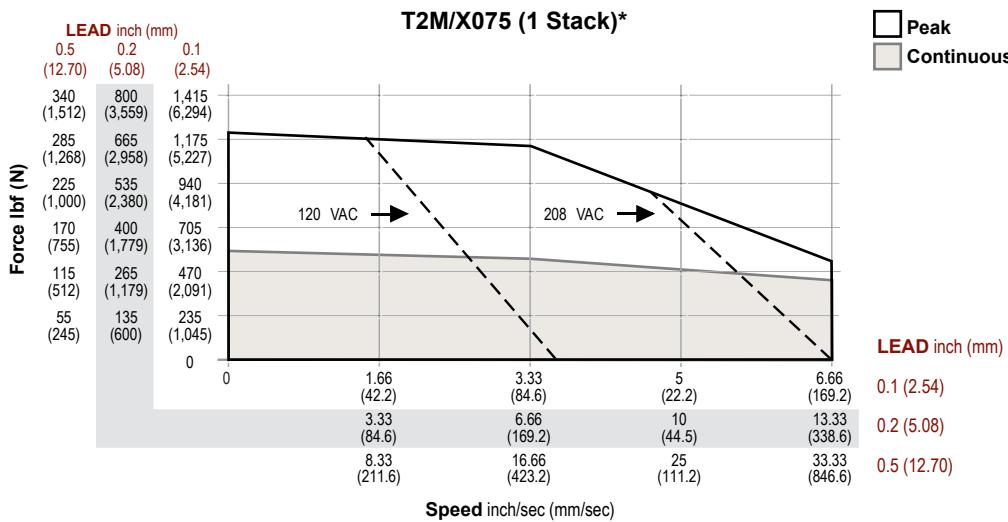

All curves represent properly lubricated and maintained actuators.

Speed vs. Force Curves

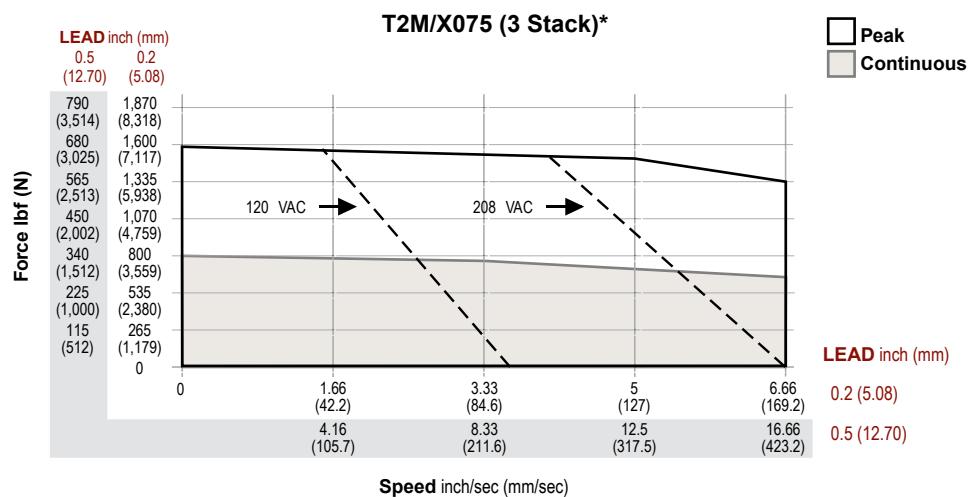

Temperature Derating

The speed/torque curves are based on 25° C ambient conditions. The actuators may be operated at ambient temperatures up to 65° C. Use the curve (shown right) for continuous torque/force deratings above 25° C.

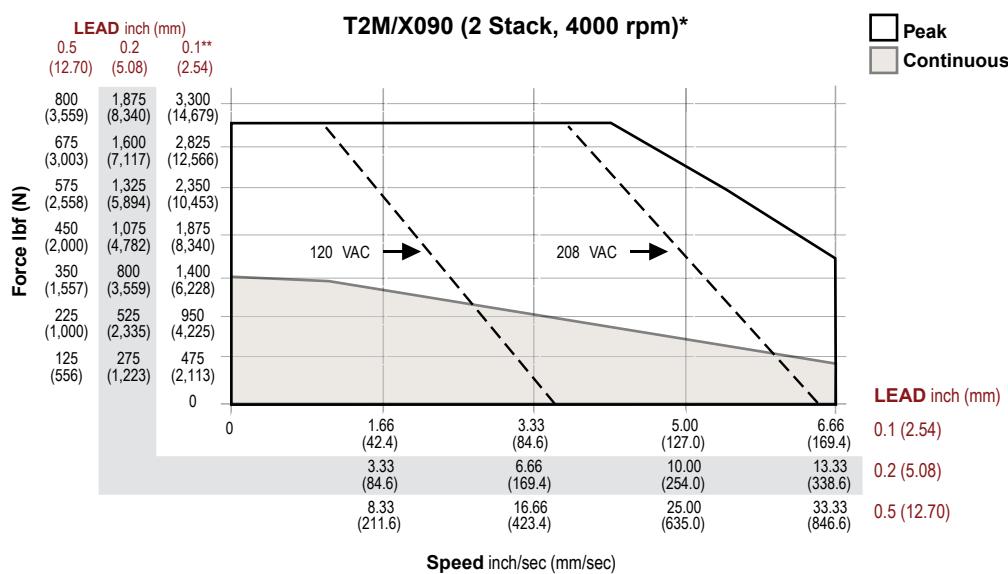

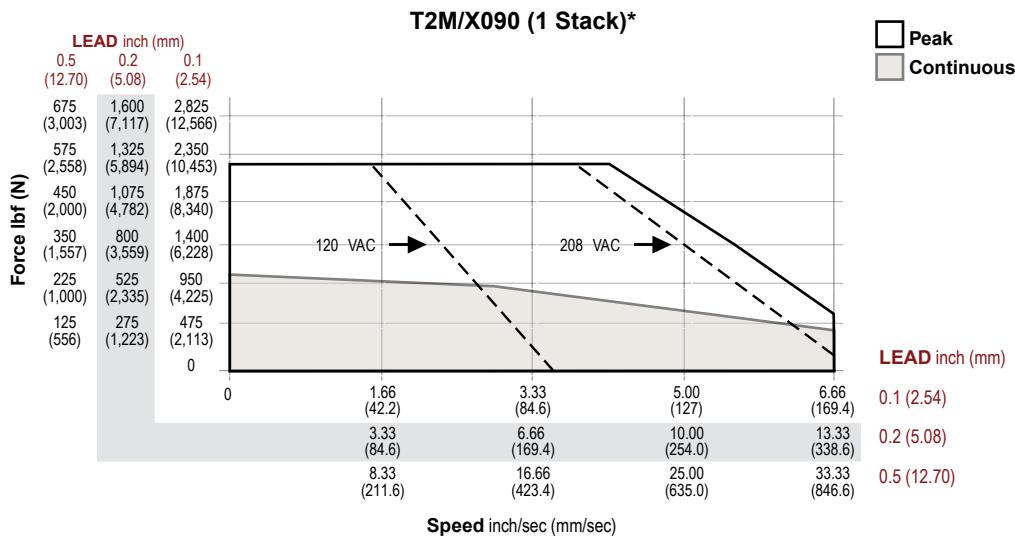

**T2X peak force for 0.1 inch lead is 2073 lbf (9221 N). T2M peak force for 0.1 inch lead limited to 1620 lbf (7206 N).

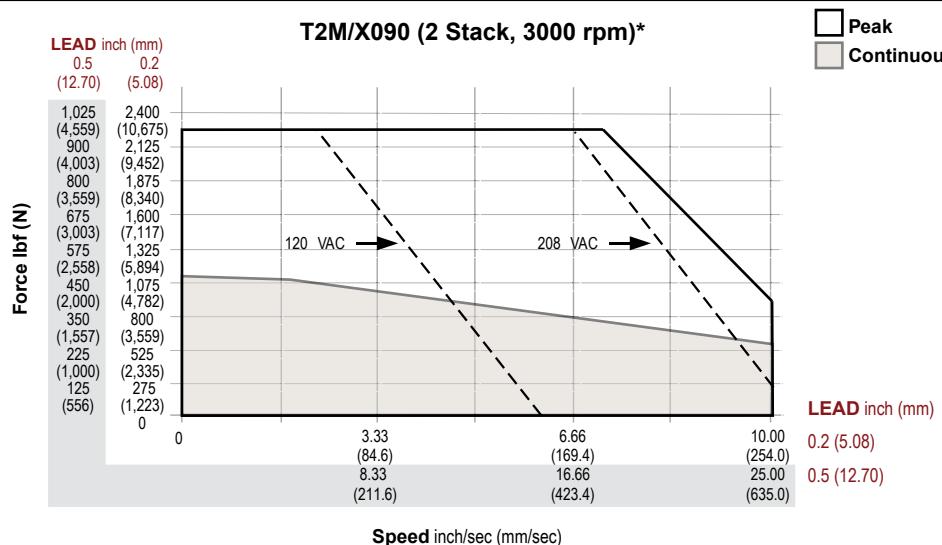

*Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 3/8" at 40°C ambient.

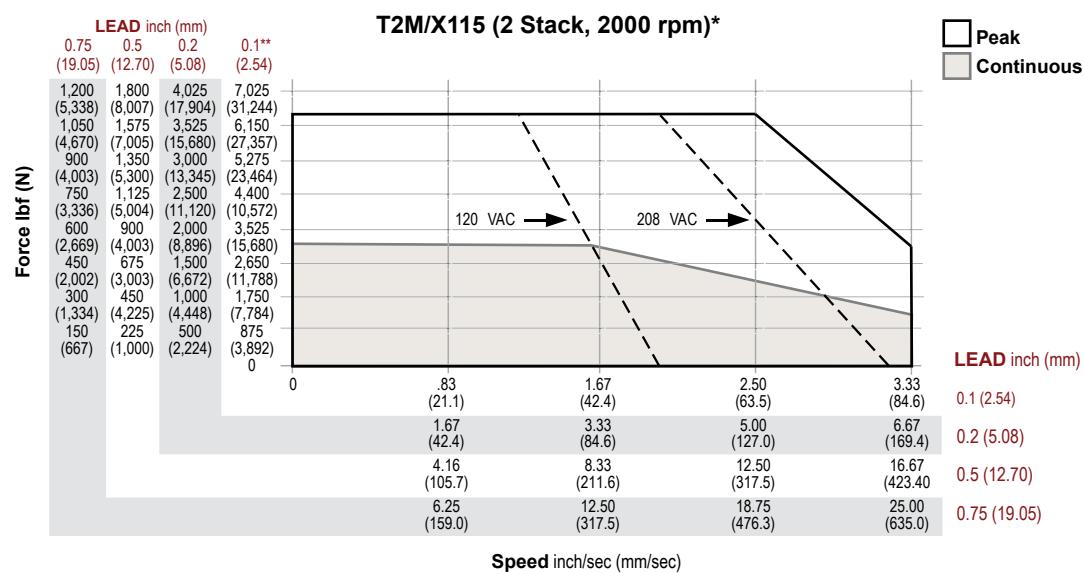

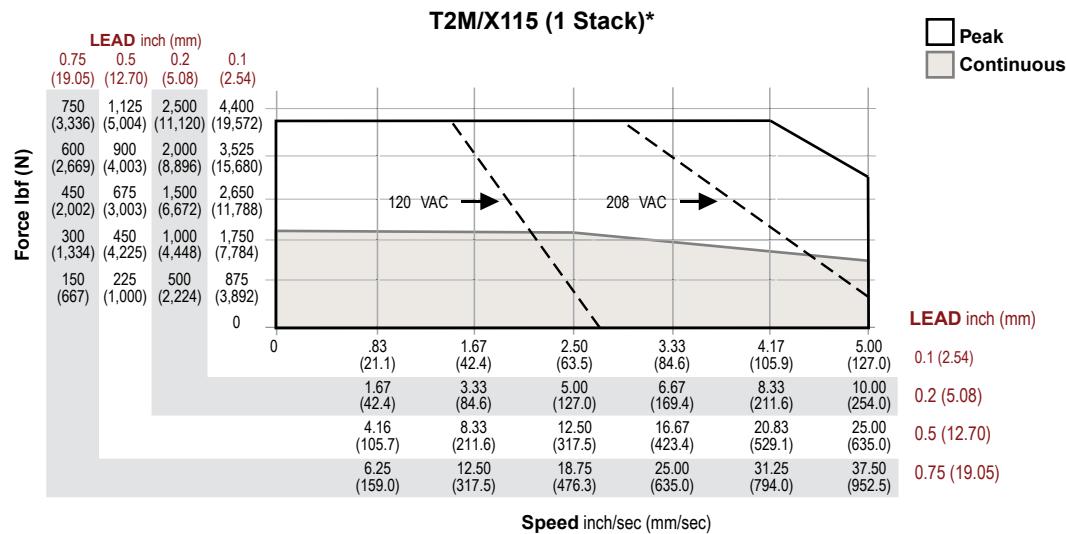

Tritex II AC Linear

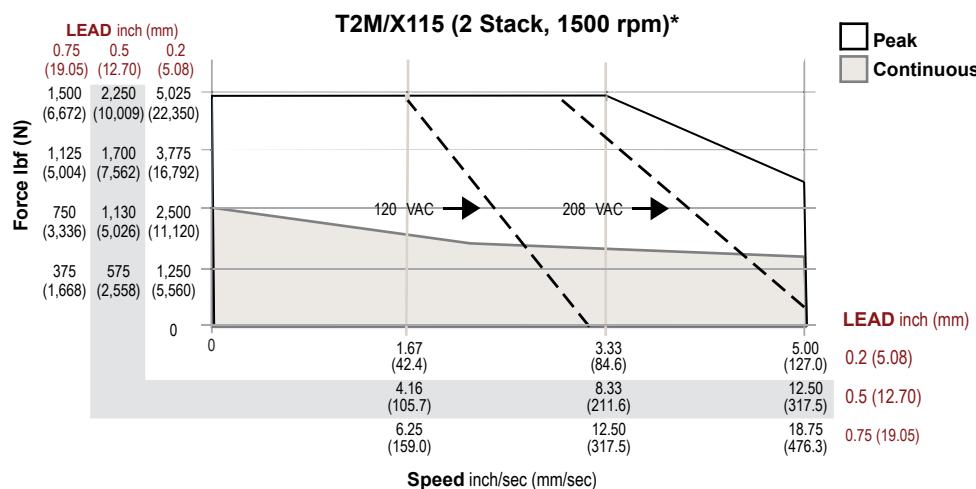

**T2X peak force for 0.1 inch lead is 2700 lbf (12010 N). T2M peak force for 0.1 inch lead limited to 1620 lbf (7206 N).

*Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 3/8" at 25°C ambient.

**T2X peak force for 0.1 inch lead is 5400 lbf (24020 N). T2M peak force for 0.1 inch lead limited to 3966 lbf (17,642 N).

*Test data derived using NEMA recommended aluminum heatsink 12" x 12" x 1/2" at 25°C ambient.

Options

AR = External Anti-rotate Assembly

This option provides a rod and bushing to restrict the actuator rod from rotating when the load is not held by another method. Shorter actuators have single sided anti-rotation attachments. Longer lengths require attachments on both sides for proper operation. For AR dimensions, see page 78.

PF = Preloaded Follower

The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the standard non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the calculated travel life of the same size and lead of a non-preloaded screw for the same application. Preloaded follower option includes angular contact bearings and is not available with LT Linear feedback option.

L1, L2, L3 = Adjustable External Travel Switches

This option allows up to 3 external switches to be included. These switches provide travel indication to the controller and are adjustable. See drawing on page 54. Must purchase external anti-rotate with this option.

HW = Manual Drive, Handwheel

This option provides a manual drive handwheel on the side of the actuator. The handwheel has an engage/disengage lever that is tied to an interrupt switch. Not available with holding brake unless application details have been discussed with your local sales representative.

PB = Protective Bellows

This option provides an accordion style protective bellows to protect the main actuator rod from damage due to abrasives or other contaminants in the environment in which the actuator must survive. The standard material of this bellows is S2 Neoprene Coated Nylon, Sewn Construction. This standard bellows is rated for environmental temperatures of -40 to 250 degrees F. Longer strokes may require the main rod of the actuator to be extended beyond standard length. Not available with extended tie rod mounting option. Please contact your local sales representative.

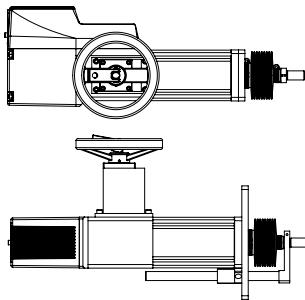

RB = Rear Electric Brake

This option provides an internal holding brake. The brake is spring activated and electrically released.

SR = Splined Main Rod

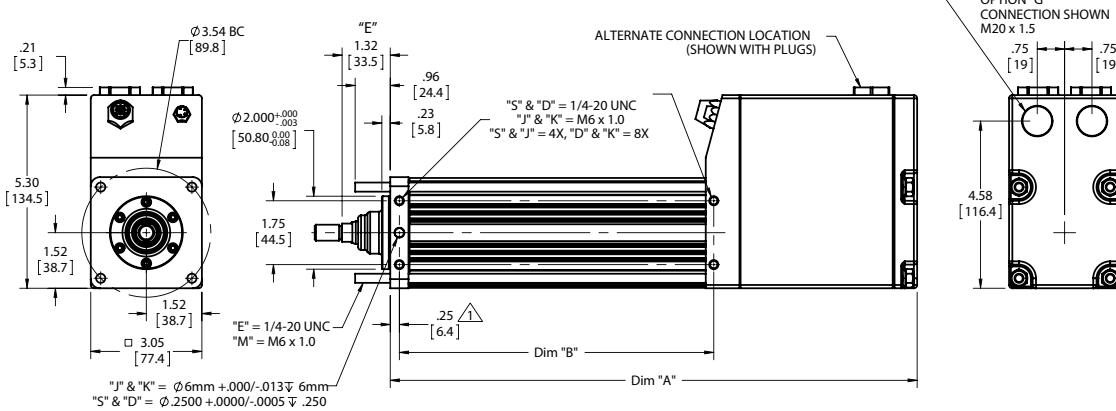

A ball spline shafting main rod with a ball spline nut that replaces the standard front seal and bushing assembly. This rod restricts rotation without the need for an external mechanism. The rod diameter will be the closest metric equivalent to our standard rod sizes. Since this option is NOT sealed, it is not suitable for environments in which contaminants may enter the actuator.

Note: Adding this option affects the overall length and mounting dimensions.

Continuous AC Input Current**	Amps	4.3	4	3.6

*Ratings based on 40°C ambient conditions.

**Continuous input current rating is defined by UL and CSA.

For output torque of R2G gearmotors, multiply by ratio and efficiency. Please note maximum allowable output torques shown below.

Inertia				
	Stator	1 Stack	2 Stack	3 Stack
R2M Motor Armature Inertia (+/-5%)	Ibf-in-sec ² (kg-cm ²)	0.000545 (0.6158)	0.000973 (1.0996)	0.001401 (1.5834)
R2G Gearmotor Armature Inertia* (+/-5%)	Ibf-in-sec ² (kg-cm ²)	0.000660 (0.7450)	0.001068 (1.2057)	0.001494 (1.6868)

*Add armature inertia to gearing inertia for total R2G system inertia.

Radial Load and Bearing Life						
RPM	50	100	250	500	1000	3000
R2M075 Ibf (N)	278 (1237)	220 (979)	162 (721)	129 (574)	102 (454)	71 (316)
R2G075 Ibf (N)	343 (1526)	272 (1210)	200 (890)	159 (707)	126 (560)	88 (391)

Side load ratings shown above are for 10,000 hour bearing life at 25 mm from motor face at given rpm.

Gearmotor Mechanical Ratings					
Model	Ratio	Maximum Allowable Output Torque-Set by User Ibf-in (Nm)	Output Torque at Motor Speed for 10,000 Hour Life		
			1000 RPM Ibf-in (Nm)	2500 RPM Ibf-in (Nm)	4000 RPM Ibf-in (Nm)
R2G075-004	4:1	1618 (182.8)	384 (43.4)	292 (32.9)	254 (28.7)
R2G075-005	5:1	1446 (163.4)	395 (44.6)	300 (33.9)	260 (29.4)
R2G075-010	10:1	700 (79.1)	449 (50.7)	341 (38.5)	296 (33.9)

Two torque ratings for the R2G gearmotors are given in the table above. The left hand columns give the maximum (peak) allowable output torque for the indicated ratios of each size R2G gearmotor. This is not the rated output torque of the motor multiplied by the ratio of the reducer.

It is possible to select a configuration of the motor selection and gear ratio such that the rated motor torque, multiplied by the gear ratio exceeds these ratings. It is the responsibility of the user to ensure that the settings of the system do not allow these values to be exceeded.

The right hand columns give the output torque at the indicated speed which will result in 10,000 hour life (L10). The setup of the system will determine the actual output torque and speed.

Gearing Reflected Inertia		
Single Reduction		
Gear Stages	Ibf-in-sec ²	(kg-cm ²)
4:1	0.000095	(0.107)
5:1	0.000062	(0.069)
10:1	0.000017	(0.019)

Backlash and Efficiency		
	Single Reduction	Double Reduction
Backlash at 1% Rated Torque	10 Arc min	13 Arc min
Efficiency	91%	86%

R2G090-100	100:1	1126 (127.2)	1100 (124.3)	1100 (124.3)	1100 (124.3)

Two torque ratings for the R2G gearmotors are given in the table above. The left hand columns give the maximum (peak) allowable output torque for the indicated ratios of each size R2G gearmotor. This is not the rated output torque of the motor multiplied by the ratio of the reducer.

It is possible to select a configuration of the motor selection and gear ratio such that the rated motor torque, multiplied by the gear ratio exceeds these ratings. It is the responsibility of the user to ensure that the settings of the system do not allow these values to be exceeded.

The right hand columns give the output torque at the indicated speed which will result in 10,000 hour life (L10). The setup of the system will determine the actual output torque and speed.

Gearing Reflected Inertia			Backlash and Efficiency		
Single Reduction		Double Reduction		Single Reduction	Double Reduction
Gear Stages	lbf-in-sec ² (kg-cm ²)	Gear Stages	lbf-in-sec ² (kg-cm ²)	Backlash at 1% Rated Torque	10 Arc min
4:1	0.000154 (0.174)	16:1	0.000115 (0.130)	Efficiency	91%
5:1	0.000100 (0.113)	20:1, 25:1	0.0000756 (0.0854)		86%
10:1	0.0000265 (0.0300)	40:1, 50:1, 100:1	0.0000203 (0.0230)

Two torque ratings for the R2G gearmotors are given in the table above. The left hand columns give the maximum (peak) allowable output torque for the indicated ratios of each size R2G gearmotor. This is not the rated output torque of the motor multiplied by the ratio of the reducer.

It is possible to select a configuration of the motor selection and gear ratio such that the rated motor torque, multiplied by the gear ratio exceeds these ratings.

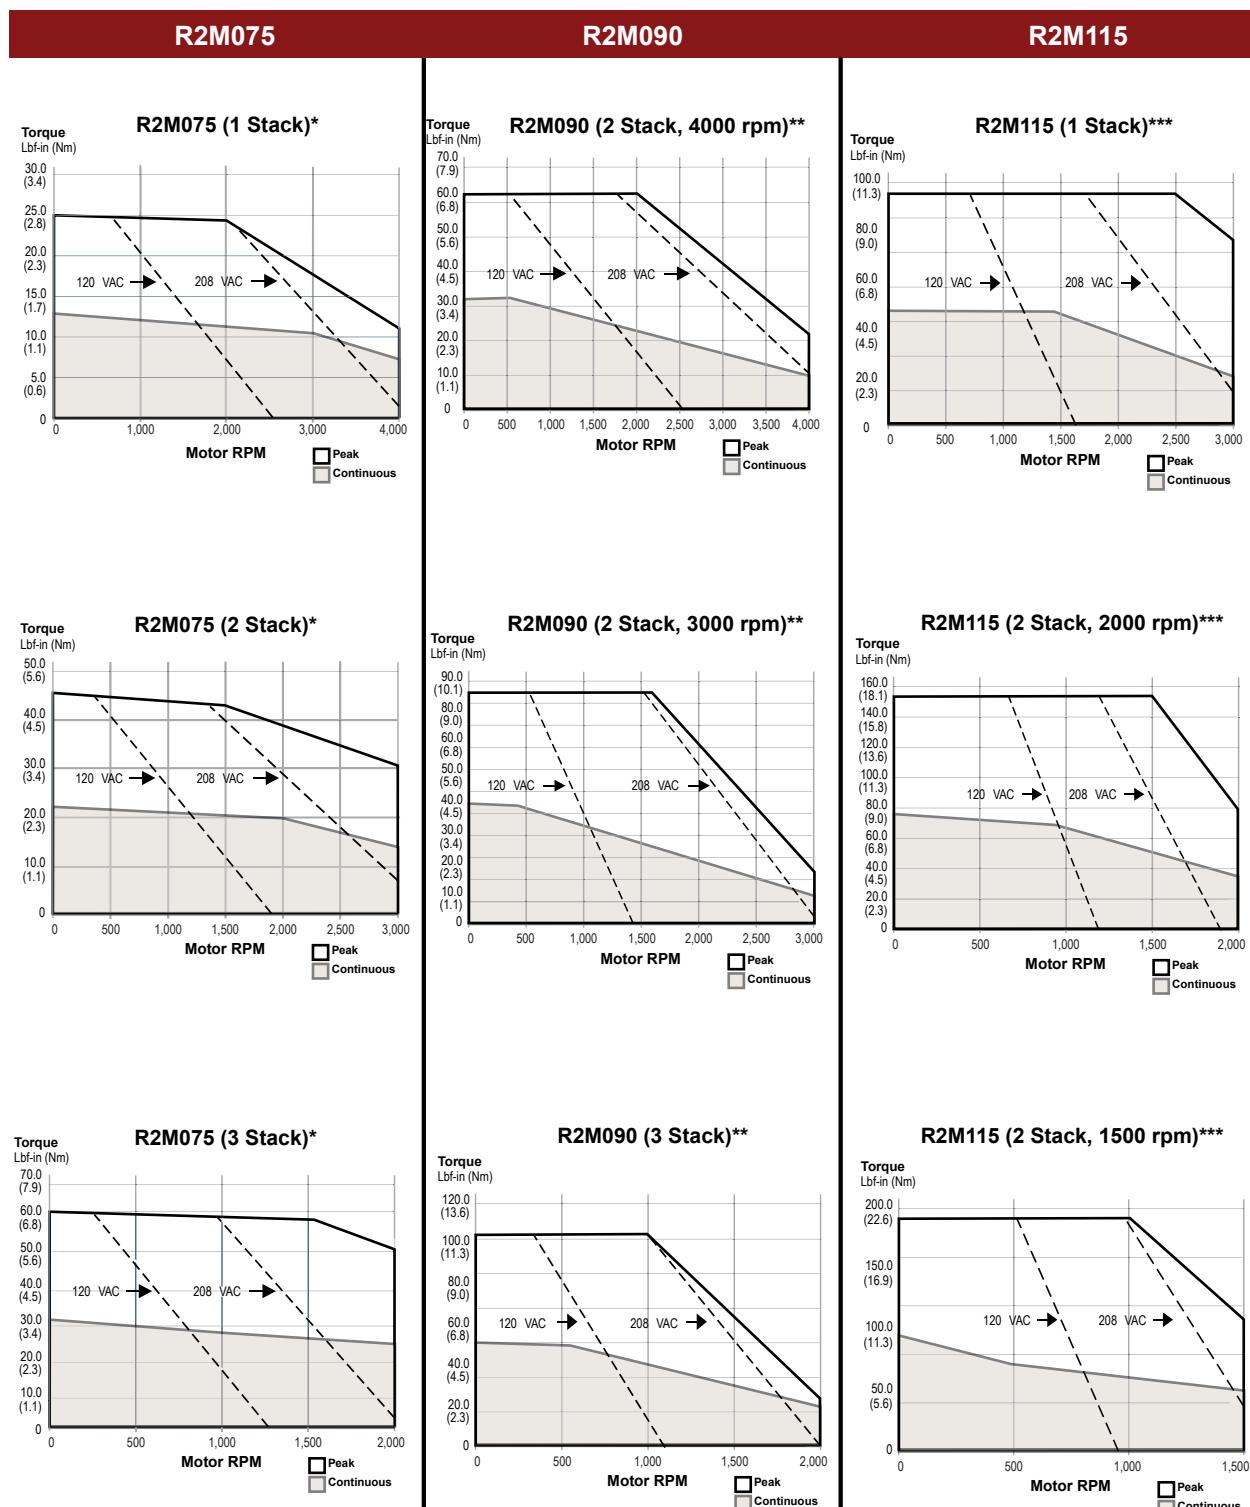

It is the responsibility of the user to ensure that the settings of the system do not allow these values to be exceeded.

The right hand columns give the output torque at the indicated speed which will result in 10,000 hour life (L10). The setup of the system will determine the actual output torque and speed.

Gearing Reflected Inertia			Backlash and Efficiency		
Single Reduction		Double Reduction		Single Reduction	Double Reduction
Gear Stages	lbf-in-sec ² (kg-cm ²)		Gear Stages	lbf-in-sec ² (kg-cm ²)	
4:1	0.000635 (0.717)		16:1	0.000513 (0.580)	
5:1	0.000428 (0.484)		20:1, 25:1	0.000350 (0.396)	
10:1	0.000111 (0.125)		40:1, 50:1, 100:1	0.0000911 (0.103)	

Motor and RTG115 Gearmotor Weights				
	R2M115 without Gears	R2G115 with 1 Stage Gearing	R2G115 with 2 Stage Gearing	Added Weight for Brake
1 Stack Stator	lb (kg)	19 (8.6)	34 (15.4)	40 (18.1)
2 Stack Stator	lb (kg)	27 (12.2)	42 (19.1)	48 (21.8)
3 Stack Stator	lb (kg)	35 (15.9)	50 (22.7)	56 (25.4)

Speed vs. Force Curves

For R2G gearmotors, multiply torque by gear ratio and efficiency. Efficiencies: Divide speed by gear ratio; 1 Stage = 0.91, 2 Stage = 0.86

*R2M075 test data derived using NEMA recommended aluminum heatsink 10" x 10" x 3/8" at 40°C ambient.

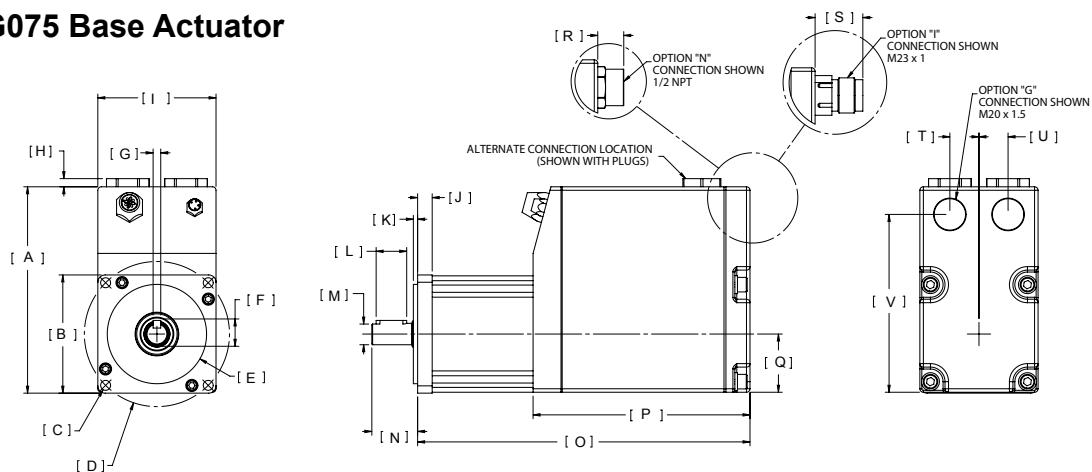

**R2M090 test data derived using NEMA recommended aluminum heatsink 10" x 10" x 3/8" at 25°C ambient.

***R2M115 test data derived using NEMA recommended aluminum heatsink 12" x 12" x 1/2" at 25°C ambient.

R = Male Metric Thread SS²
V = Female US Standard Thread SS²
W = Male, US Standard Thread SS²

HH = Feedback Type

HD = Analog Hall Device
IE = Incremental Encoder, 8192 count resolution
AF = Absolute Feedback

III-II = Motor Stator, All 8 Pole

T2M/X075 Stator Specifications
138-40 = 1 Stack, 230 VAC, 4000 rpm
238-30 = 2 Stack, 230 VAC, 3000 rpm
338-20 = 3 Stack, 230 VAC, 2000 rpm

T2M/X090 Stator Specifications

138-40 = 1 Stack, 230 VAC, 4000 rpm
238-40 = 2 Stack, 230 VAC, 4000 rpm
238-30 = 2 Stack, 230 VAC, 3000 rpm⁹

T2M/X115 Stator Specifications

138-30 = 1 Stack, 230 VAC, 3000 rpm
238-20 = 2 Stack, 230 VAC, 2000 rpm¹¹
238-15 = 2 Stack, 230 VAC, 1500 rpm^{9,11}
(N/A with 0.1" lead)

JJJ = Voltage

230 = 115-230 VAC, single phase

KKK = Option Board

SIO = Standard I/O Interconnect
IA4 = 4-20 mA Analog I/O
COP = CANOpen w/M12 connector
CON = CANOpen, without M12¹⁰
EIP = SIO plus Ethernet/IP w/M12 connector
EIN = SIO plus Ethernet/IP without M12 connector¹⁰
PIO = SIO plus Profinet IO w/M12 connector
PIN = SIO plus Profinet IO without M12 connector¹⁰
TCP = SIO plus Modbus TCP w/M12 connector
TCN = SIO plus Modbus TCP without M12
connector¹⁰

MM = Mechanical Options⁶

AR = External Anti-rotate
PF = Preloaded Follower³
L1/2/3 = External Limit Switches⁷
HW = Manual Drive, Handwheel with Interlock
Switch (T2X only)
RB = Rear Brake
PB = Protective Bellows (N/A with extended tie rod
mounting option)
SR = Splined Main Rod^{8,2}

For options or specials not listed above or for
extended temperature operation, please contact Exlar

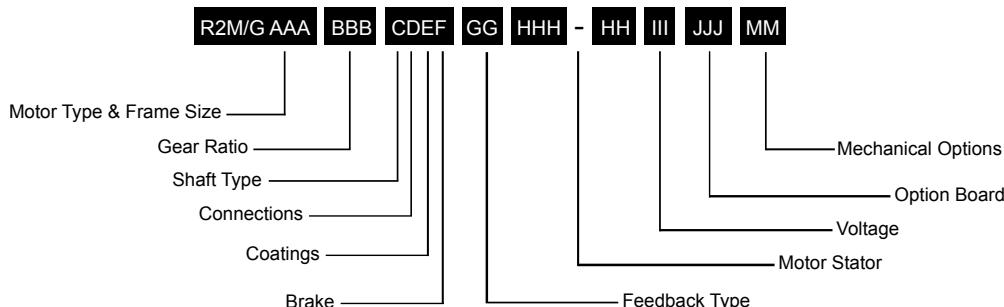

NOTES:

1. Chrome-plated carbon steel. Threads not chrome-plated.
2. Consult Exlar when ordering splined stainless steel main rod.
3. The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the std non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the calculated travel life of the same size and lead of a non-preloaded screw.

4. This housing option may indicate the need for special material main rods or mounting.
5. 0.75 lead not available above 12 inch stroke.
6. For extended temperature operation consult factory for model number.
7. Limit switch option requires AR option.
8. This option is not sealed and is not suitable for any environment in which contaminants come in contact with actuator and may enter the actuator.

9. N/A with 0.1 inch lead
10. Requires customer supplied Ethernet cable through I/O port for Class 1 Division 2 compliance only.
11. Not available with 4 inch stroke.

NOTES:

- Requires customer supplied Ethernet cable through I/O port for Class 1 Division 2 compliance only.
- For extended temperature operation consult factory for model number.

Tritex II AC Ordering Guide

Cable and Accessories

Tritex II AC Series Cable & Accessories		Part No.
Communications Accessories - Tritex uses a 4 pin M8 RS485 communications connector		
Recommended PC to Tritex communications cable-USB/RS485 to M8 connector - xxx = Length in feet, 006 or 015 only		CBL-T2USB485-M8-xxx
Multi-Drop RS485 Accessories		
RS485 splitter - M8 Pin plug to double M8 Socket receptacle		TT485SP
Multidrop Communications Cable M8 to M8 for use with TT485SP/RS485 splitter - xxx = Length in feet, 006 or 015 only		CBL-TTDAS-xxx
"G" Connection Accessories		
Nickel plated cable gland- M20 x 1.5 - CE shielding- 2 required		GLD-T2M20 x 1.5
Power cable prepared on one end for use with GLD-T2M20 x 1.5 xxx = Length in ft, Standard lengths 015, 025, 050, 075, 100		CBL-T2IPC-RAW-xxx
I/O cable prepared on one end for use with GLD-T2M20 x 1.5 xxx = Length in ft, Standard lengths 015, 025, 050, 075, 100		CBL-T2IOC-RAW-xxx
"N" Connection Accessories		
M20 x 1.5 to 1/2" NPT threaded hole adapter for use with conduit		ADAPT-M20-NPT1/2
"I" Connection		
Power cable with M23 6 pin xxx = Length in feet, std lengths 015, 025, 050, 075, 100		CBL-T2IPC-SMI-xxx
I/O cable (75 mm) with M23 19 pin xxx = Length in feet, std lengths 015, 025, 050, 075, 100		CBL-TTIOC-SMI-xxx
I/O cable (90 & 115 mm) with M16 19 pin xxx = Length in feet, std lengths 015, 025, 050, 075, 100		CBL-T2IOC-SMI-xxx
Multi-Purpose Communications Accessories for long runs, requires terminal block interconnections		
USB to RS485 convertor/cable - USB to RS485 flying leads - xxx = Length in feet, 006 or 015 only		CBL-T2USB485-xxx
Communications cable M8 to flying leads cable xxx = Length in feet, standard lengths 015, 025, 050, 075, 100		CBL-TTCOM-xxx
Option Board Cables and Accessories		
CAN Male to Female Molded 3 ft. cable		CBL-TTCAN-SMF-003
CAN Male to Female Molded 6 ft. cable		CBL-TTCAN-SMF-006
CAN Cable, no connectors – per foot		CBL-TTCAN-S
CAN Male connector, field wireable		CON-TTCAN-M
CAN Female connector, field wireable		CON-TTCAN-F
CAN Splitter		CON-TTCAN-SP
EIP, PIO and TCP option Ethernet cable - M12 to RJ45 cable xxx = Length in feet, std lengths 015, 025, 050, 075, 100.		CBL-T2ETH-R45-xxx
Electrical Accessories		
Dynamic Braking Resistor - 100W47Ohm		T2BR1
Replacement -AF Battery - used for absolute feedback option		T2BAT1
Replacement Normally Closed External Limit Switch (Turck Part number BIM-UNT-RP6X)		43404
Replacement Normally Open External Limit Switch (Turck Part number BIM-UNT-AP6X)		43403
Mechanical Accessories		
Clevis Pin for T2M/X090 male "M" rod end 1/2-20 thread		CP050
Clevis Pin for T2M/115 male "M" rod end 3/4-16 thread		CP075
Spherical Rod Eye for T2M/X090 male "M" rod end 1/2-20 thread		SRM050
Spherical Rod Eye for T2M/X115 male "M" rod end 3/4-16 thread		SRM075
Rod Eye for T2M/X090 male "M" rod end 1/2-20 thread		REI050
Rod Eye for T2M/X115 male "M" rod end 3/4-16 thread		RE075
Rod Clevis for T2M/X090 male "M" rod end 1/2-20 thread		RCI050
Rod Clevis for T2M/X115 male "M" rod end 3/4-16 thread		RC075
Jam Nut for T2M/X090 male rod end, 1/2 - 20		JAM1/2-20-SS
Jam Nut for T2M/X115 male rod end, 3/4-16		JAM3/4-16-SS

CBL-T2USB485-M8-xxx

Our recommended communications cable.
No special drivers or setup required for use
with MS Windows™.

CBL-T2USB485-xxx

Use for terminal connections with CBL-TTCOM for long cable runs. No special
drivers or setup required for use with MS
Windows™.

CBL-TTCOM-xxx

Use with CBL-T2USB485-xxx
for long cable runs.

CBL-TTDAS-xxx

For use with TT485SP for
multi-drop applications.

TT485SP

RS485 communications
splitter. Use to daisy-chain
multiple Tritex actuators.

CON-TTCAN-SP
CAN splitter

CON-TTCAN-M
M12 Field wireable
connector

Tritex II DC

Linear & Rotary Actuators

No Compromising on Power, Performance or Reliability

With forces to approximately 950 lbs (4kN) continuous and 1,300 lbf peak (6 kN), and speeds to 33 in/sec (800 mm/sec), the DC Tritex II linear actuators also offer a benefit that no other integrated product offers: POWER! No longer are you limited to trivial amounts of force, or speeds so slow that many motion applications are not possible. And the new Tritex II with DC power electronics operates with maximum reliability over a broad range of ambient temperatures: -40°C to +65°C. The DC powered Tritex II actuators contain a 750 W servo amplifier and a very capable motion controller. With standard features such as analog following for position, compound moves, move chaining, and individual force/torque control for each move, the Tritex II Series is the ideal solution for most motion applications.

Tritex II Models

- TDM standard mechanical capacity actuator, 60, and 75 mm
- TDX high mechanical capacity actuator, 60, and 75 mm
- RDM rotary motor, 60, 75, and 90 mm
- RDG rotary gearmotor, 60, 75, and 90 mm

Power Requirements

- DC Power 12-48 VDC nominal
- Connections for external braking resistor

Feedback Types

- Analog Hall with 1000 count resolution
- Incremental encoder with 8192 count resolution
- Absolute Feedback (analog hall with multi-turn, battery backup)

Connectivity

- Internal terminals accessible through removable cover (75 and 90 mm models)
- Threaded ports for cable glands (75 and 90 mm models)
- Optional connectors - M23 Power - M23 I/O
- M8 connector for RS485
- M12 connector for EtherNet options
- Custom connection options
- Embedded leads

Technical Characteristics	
Frame Sizes in (mm)	2.3 (60), 2.9 (75)
Screw Leads in (mm)	0.1 (2), 0.2 (5), 0.4 (10), 0.5 (13)
Standard Stroke Lengths in (mm)	3 (75), 6 (150), 10 (250), 12 (300), 14 (350), 18 (450)
Force Range	up to 872 lbf (3879 N)
Maximum Speed	up to 33.3 in/s (846 mm/s)

Tritex II Linear DC Actuator

Tritex II Rotary Motor with Connectors

Tritex II Linear Actuator with Customer-supplied Cable Glands Ports

Operating Conditions and Usage		
Accuracy:		
Screw Lead Error	in/ft (μm / 300 mm)	0.001 (25)
Screw Travel Variation	in/ft (μm / 300 mm)	0.0012 (30)
Screw Lead Backlash	in	0.004 (TDX), 0.008 (TDM) maximum
Ambient Conditions:		
Standard Ambient Temperature	°C	0 to 65
Extended Ambient Temperature**	°C	-40 to 65
Storage Temperature	°C	-40 to 85
IP Rating		TDM = IP54S, TDX = IP66S RDM/RDG = IP66S
NEMA Ratings		None
Vibration		5.0 g rms, 5 to 500 hz

*Ratings at 40°C, operation over 40°C requires de-rating. See page 96.

**Consult Exlar for extended temperature operation.

Tritex II DC Overview

Communications & I/O

Digital Inputs:

9 to 30 VDC Opto-isolated

Digital outputs:

30 VDC maximum

100 mA continuous output

Isolated

Short circuit and over temperature protected

Analog Input DC:

0-10V or +/-10V

0-10V mode, 12 bit resolution

+/-10V mode, 13 bit resolution assignable to Position, Velocity,

Torque, or Velocity override command

Analog Output DC:

0-10V

11 bit resolution

IA 4 option:

4-20 mA input

16 bit resolution

Isolated

Assignable to Position, Velocity, Torque, or Velocity Override command

4-20 mA output

12 bit resolution

Assignable to Position, Velocity, Current, Temperature, etc.

Standard Communications:

- 1 RS485 port, Modbus RTU, opto-isolated for programming, controlling and monitoring

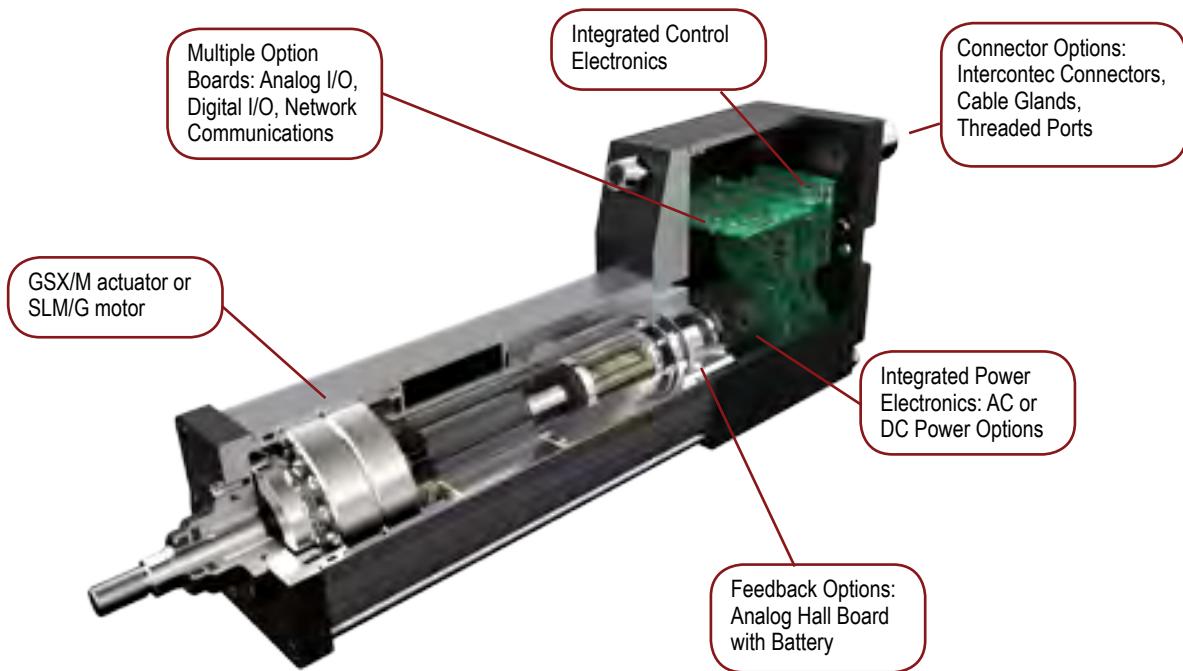

Tritex II DC I/O

	60/75/90 mm frame with SIO, EIP, PIO, TCP	60/75/90 mm frame with IA4	60/75/90 mm frame with CAN
Isolated digital inputs	8	4	4
Isolated digital outputs	4	3	3
Analog input, non isolated	1	0	0
Analog output, non isolated	1	0	0
Isolated 4-20ma input	0	1	0
Isolated 4-20ma output	0	1	0

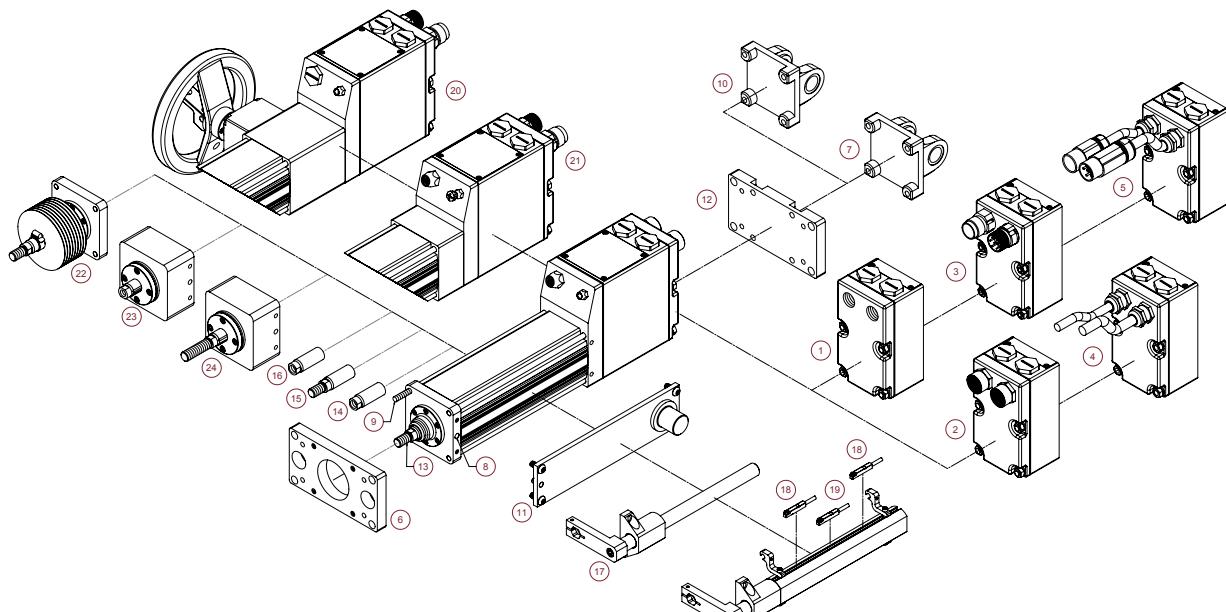

The IO count and type vary with the actuator model and option module selected.

All models include isolated digital IO, and an isolated RS485 communication port when using Modbus RTU protocol.

Product Features

Tritex II DC

- 1 - Standard Straight Threaded Port with internal terminals, M20x1.5 (75 mm only)
- 2 - NPT Threaded Port via Adapter with Internal Terminals, 1/2" NPT (75 mm only)
- 3 - Interconnect Style - Exlar standard, M23 Style Connector
- 4 - Embedded Leads, 3 ft. standard*
- 5 - Embedded Leads, with "I" plug, 3 ft. standard
- 6 - Front & Rear Flange and Front Flange*
- 7 - Rear Clevis
- 8 - Double Side Mount, Metric Side Mount*, Metric Double Side Mount, Side Mount*
- 9 - Extended Tie Rod and Metric Extended Tie Rod
- 10 - Metric Rear Clevis
- 11 - Metric Side Trunnion and Side Trunnion
- 12 - Female Metric Thread and Male Metric Thread SS
- 13 - Male Metric Thread and Male Metric Thread SS
- 14 - Female Metric Thread and Female Metric Thread SS
- 15 - Male US Standard Thread and Male, US Standard Thread SS
- 16 - Female US Standard Thread and Female US Standard Thread SS
- 17 - External Anti-rotate
- 18 - External Limit Switch - N.C., PNP
- 19 - External Limit Switch - N.O., PNP
- 20 - Manual Drive, Handwheel with Interlock Switch (TDX075 only)
- 21 - Rear Brake
- 22 - Protective Bellows
- 23 - Splined Main Rod - Female
- 24 - Splined Main Rod - Male

*Consult Factory

Tritex II DC Overview

Industries and Applications

Hydraulic cylinder replacement

Ball screw replacement

Pneumatic cylinder replacement

Mobile Equipment

Unmanned Vehicles

Process Control

Oil & Gas Wellhead Valve Control

Pipeline Valve Control

Damper Control

Knife Valve Control

Chemical pumps

Entertainment / Simulation

Ride Motion Bases

Animatronics

Since no fluids and associated equipment (pumps, compressors, filters, accumulators, hose/tubing, oil testing, etc.) are required, electromechanical actuators offer greater energy efficiency, less environmental impact and lower total life-cycle cost.

The Tritex II Series DC actuators integrate a DC powered servo drive, digital position controller, brushless motor, and linear actuator in a compact, sealed package making it perfect for environments where AC power is difficult to achieve.

Mechanical Specifications

TDM/X060

	Stator	1 Stack	2 Stack	3 Stack
Lead	RPM @ 48 VDC	5000	5000	4000
0.1	Continuous Force	lbf (N)	339 (1508)	528 (2349)

Maximum Continuous Power Supply Current ^{**}		Amps	15	18	18			

*Power supply current is based on software current limit, not thermal limit. Consideration for peak current should also be considered when sizing power supplies.

**Rating based on 40° C ambient conditions.

DEFINITIONS:

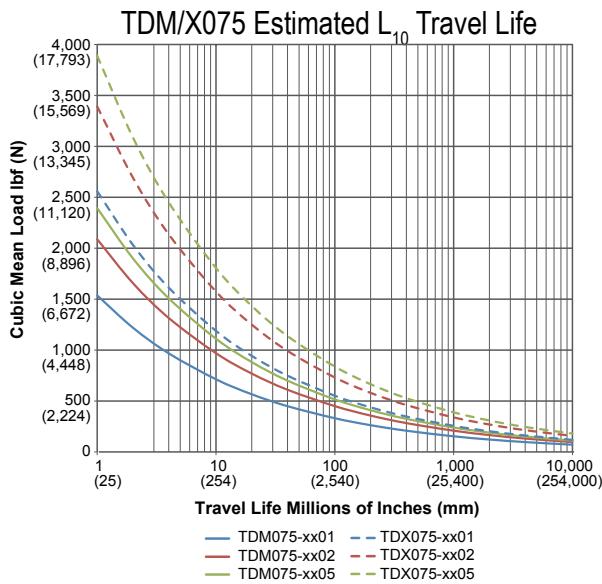

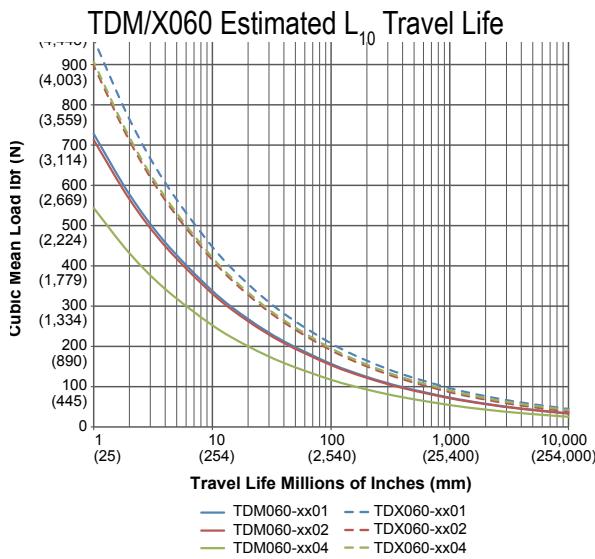

Continuous Force: The linear force produced by the actuator at continuous motor torque.

Peak Force: The linear force produced by the actuator at peak motor torque.

Max Speed: The maximum rated speed produced by the actuator at rated voltage.

C_a (Dynamic Load Rating): A design constant used in calculating the estimated travel life of the roller screw.

Estimated Service Life

The L₁₀ expected life of a roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained roller screws are expected to meet or exceed. For higher than 90% reliability, the result should be multiplied by the following factors: 95% x 0.62; 96% x 0.53; 97% x 0.44; 98% x 0.33; 99% x 0.21. This is not a guarantee; these charts should be used for estimation purposes only.

The underlying formula that defines this value is:

Travel life in millions of inches, where:

C_a = Dynamic load rating (lbf)

F_{cml} = Cubic mean applied load (lbf)

ℓ = Roller screw lead (inches)

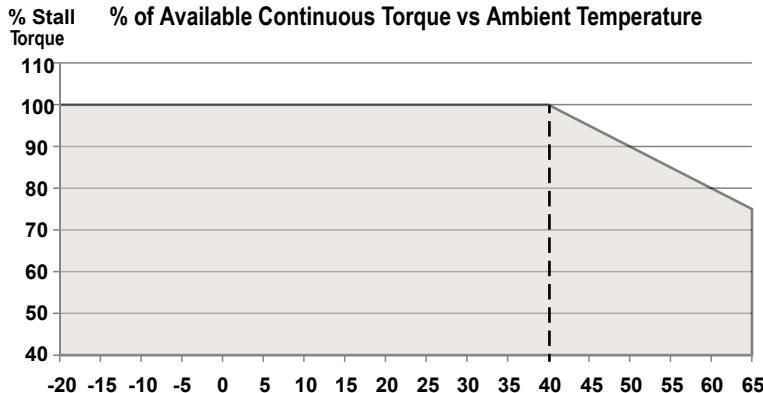

$$L_{10} = \left(\frac{C_a}{F_{cml}} \right)^3 \times \ell$$

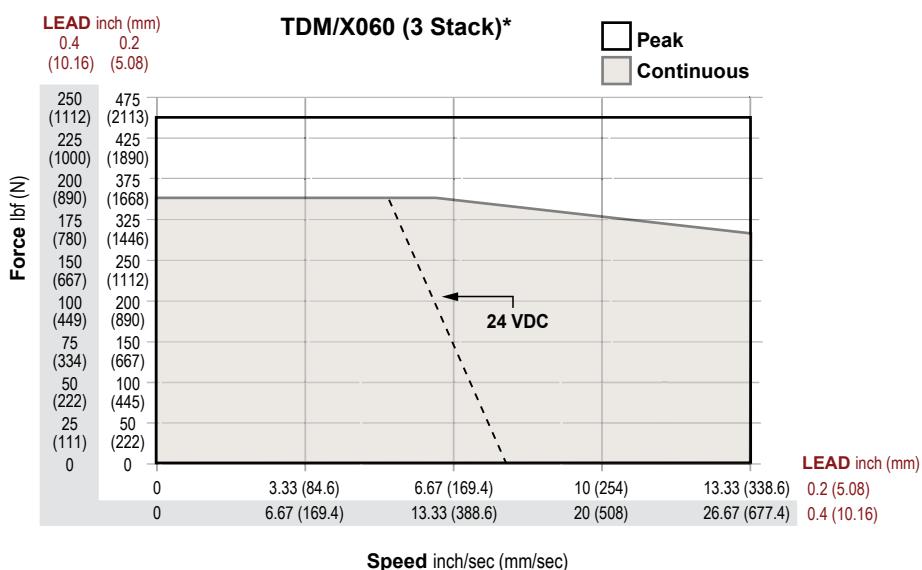

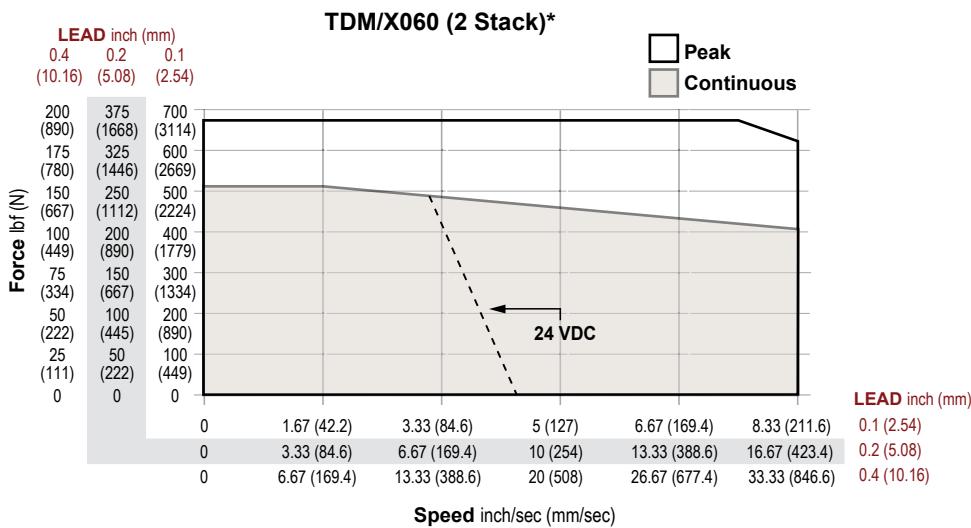

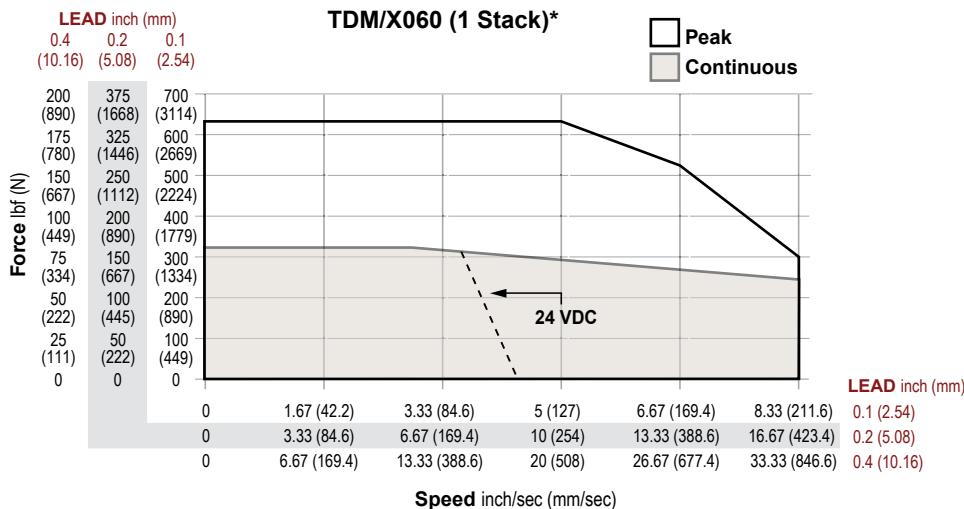

All curves represent properly lubricated and maintained actuators.

Speed vs. Force Curves

Temperature Derating

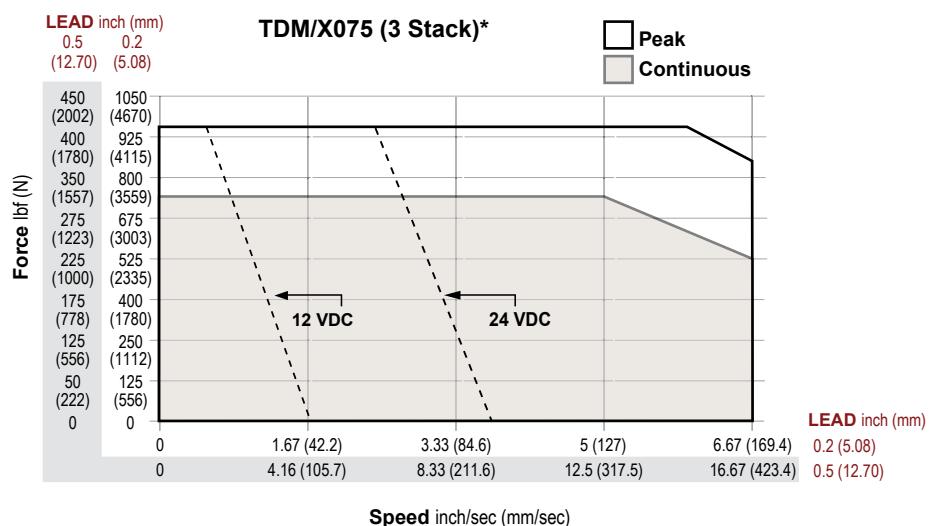

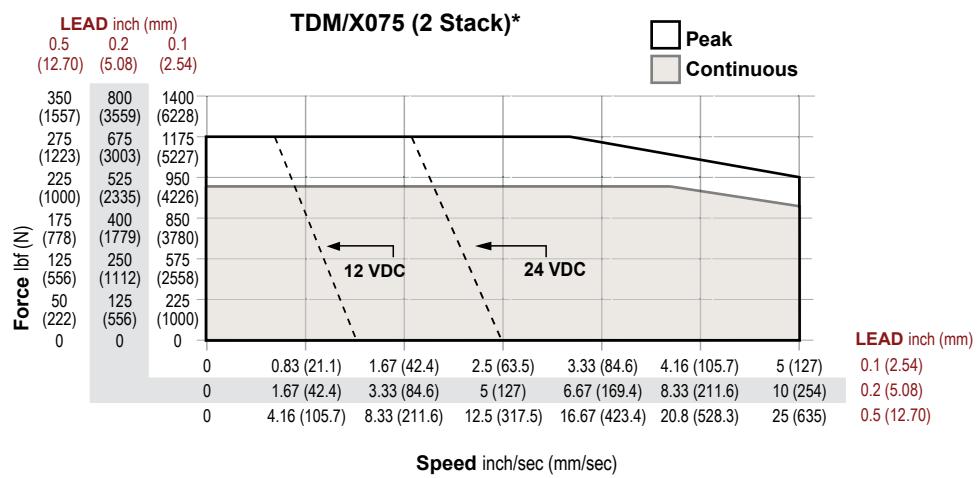

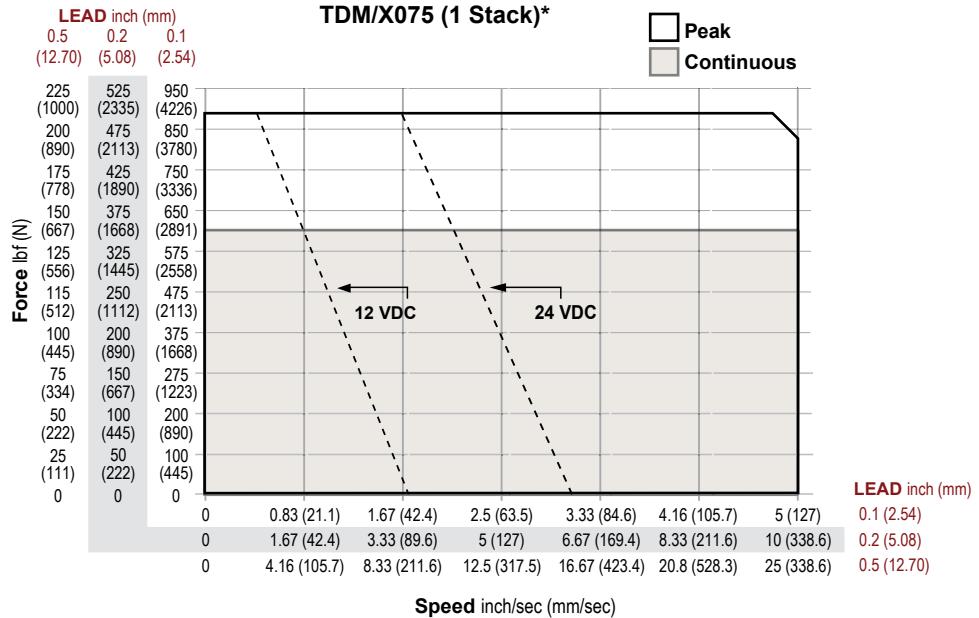

The speed/torque curves are based on 40° C ambient conditions. The actuators may be operated at ambient temperatures up to 65° C. Use the curve (shown right) for continuous torque/force deratings above 40° C.

*Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 3/8" at 40°C ambient.

Tritex II DC Linear

*Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 3/8" at 40°C ambient.

Options

AR = External Anti-rotate Assembly

This option provides a rod and bushing to restrict the actuator rod from rotating when the load is not held by another method. Shorter actuators have single sided anti-rotation attachments. Longer lengths require attachments on both sides for proper operation. For AR dimensions, see page 102.

PF = Preloaded Follower

The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the standard non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the calculated travel life of the same size and lead of a non-preloaded screw for the same application. Preloaded follower option includes angular contact bearings and is not available with LT Linear feedback option.

L1, L2, L3 = Adjustable External Travel Switches

This option allows up to 3 external switches to be included. These switches provide travel indication to the controller and are adjustable. See drawing on page 54. Must purchase external anti-rotate with this option.

HW = Manual Drive, Handwheel

This option provides a manual drive handwheel on the side of the actuator. The handwheel has an engage/disengage lever that is tied to an interrupt switch. Not available with holding brake unless application details have been discussed with your local sales representative.

RB = Rear Electric Brake

This option provides an internal holding brake. The brake is spring activated and electrically released.

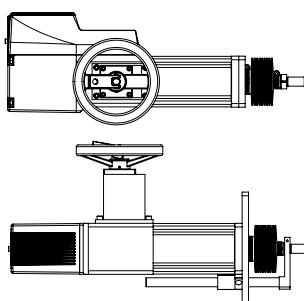

PB = Protective Bellows

This option provides an accordion style protective bellows to protect the main actuator rod from damage due to abrasives or other contaminants in the environment in which the actuator must survive. The standard material of this bellows is S2 Neoprene Coated Nylon, Sewn Construction. This standard bellows is rated for environmental temperatures of -40 to 250 degrees F. Longer strokes may require the main rod of the actuator to be extended beyond standard length. Not available with extended tie rod mounting option. Please contact your local sales representative.

SR = Splined Main Rod

A ball spline shafting main rod with a ball spline nut that replaces the standard front seal and bushing assembly. This rod restricts rotation without the need for an external mechanism. The rod diameter will be the closest metric equivalent to our standard rod sizes. Since this option is NOT sealed, it is not suitable for environments in which contaminants may enter the actuator.

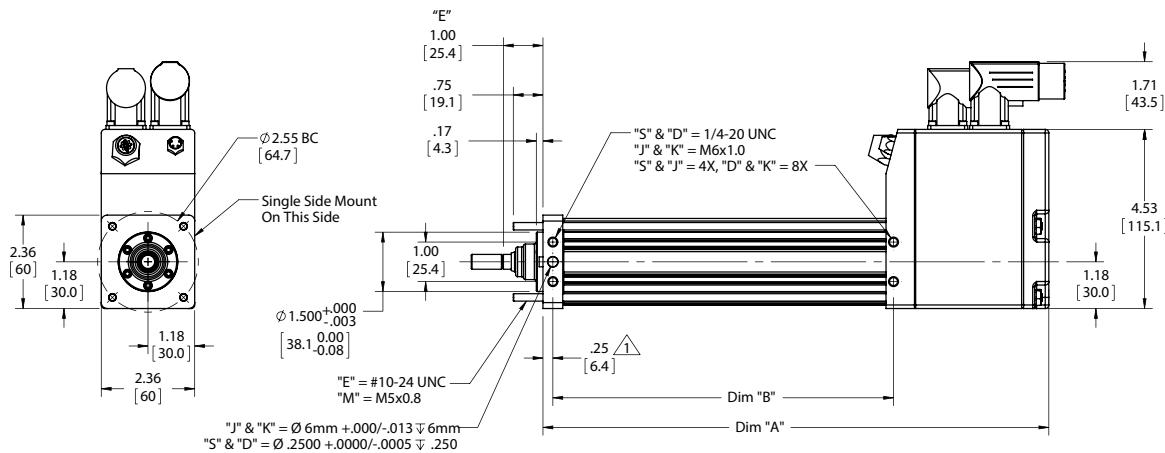

Note: Adding this option affects the overall length and mounting dimensions.

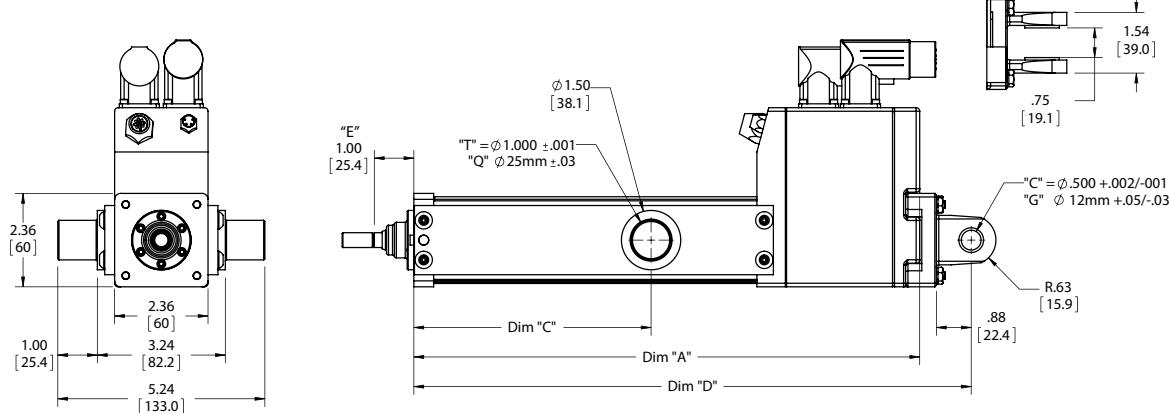

Tritex II DC Linear

Dimensions

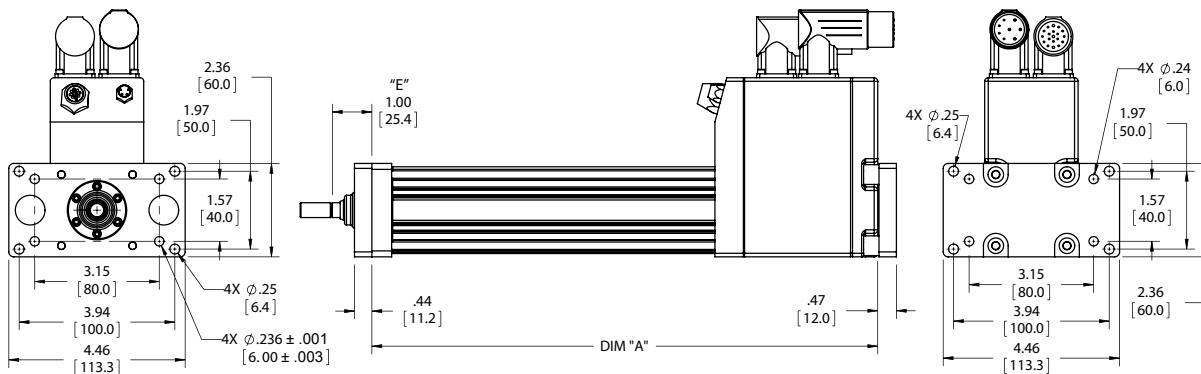

TDM/X060 Double Side Mount or Extended Tie Rod Mount

TDM/X060 Side Trunnion Mount or Rear Clevis Mount

TDM/X060 Front, Rear, or Front and Rear Flange Mount

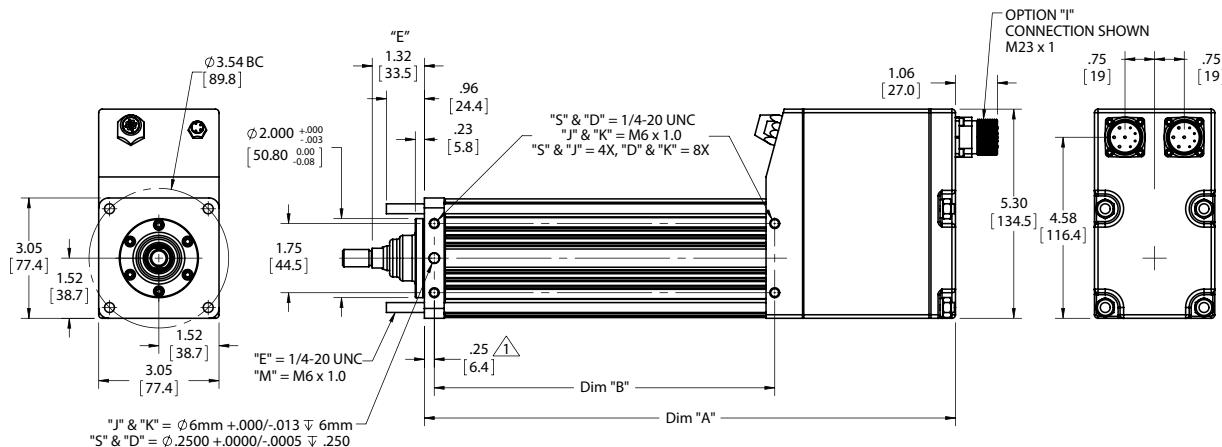

DIM	3 inch (75 mm) stroke in (mm)	6 inch (150 mm) stroke in (mm)	10 inch (250 mm) stroke in (mm)	12 inch (300 mm) stroke in (mm)
A	9.79 (248.7)	12.79 (324.9)	16.79 (426.5)	18.79 (477.3)
B	5.62 (142.8)	8.62 (218.9)	12.62 (320.6)	14.62 (371.4)
C	3.00 (76.2)	6.00 (152.4)	10.00 (254.0)	12.00 (304.8)
D	11.10 (281.9)	14.10 (358.1)	18.10 (459.7)	20.10 (510.5)

* Add 1.75 inches to dimensions "A", "B" and "D" if ordering a brake. Add .50 inches to dimensions "A", "C" and "D" and dimension if ordering a splined Δ main rod.

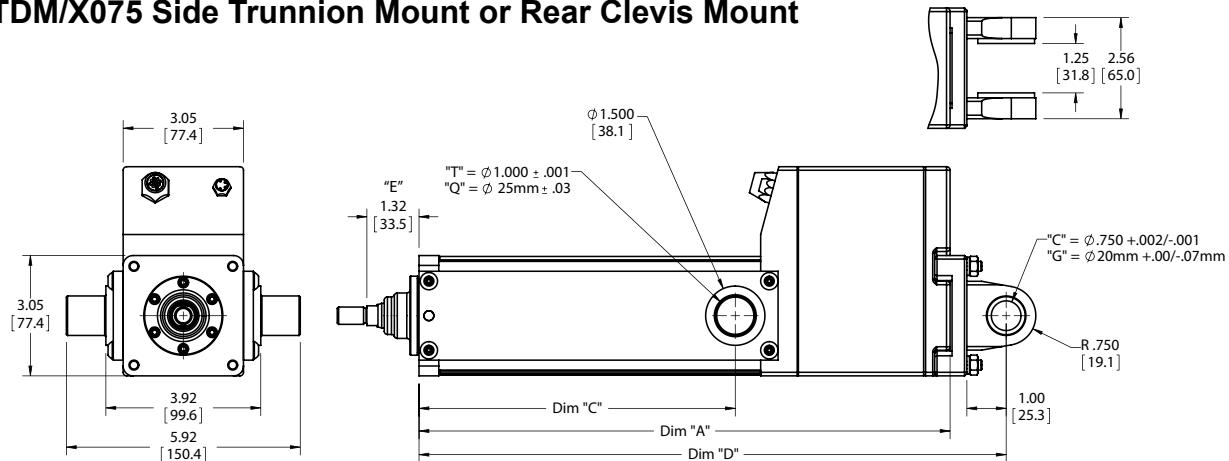

** Add 2 inches (50.8 mm) to "E" if ordering protective bellows.

Pre-sale drawings and models are representative and are subject to change. Certified drawings and models are available for a fee. Consult your local Exlar representative for details.

Tritex II DC Rotary

Mechanical Specifications

RDM/G060

Rotary Motor Torque and Speed Ratings		Stator	1 Stack	2 Stack	3 Stack
		RPM at 48 VDC	5000	5000	4000
Continuous Torque		Ibf-in (Nm)	6.8 (0.76)	10.5 (1.18)	13 (1.47)
Peak Torque		Ibf-in (Nm)	12.8 (1.44)	13.3 (1.5)	17 (1.92)
Drive Current @ Continuous Torque		Amps	14.8	21.5	21.5
Operating Temperature Range**		-20 to 65° C (-40° C available, consult Exlar)			
Maximum Continuous Power Supply Current*		Amps	8	11	13

*Power supply current is based on software current limit, not thermal limit. Consideration for peak current should also be considered when sizing power supplies. For output torque of RDG gearmotors, multiply by ratio and efficiency. Please note maximum allowable output torques found at bottom of page.

**Ratings based on 40° C ambient conditions.

Inertia		Stator	1 Stack	2 Stack	3 Stack
RDM Motor Armature Inertia (+/-5%)		Ibf-in-sec ² (kg-cm ²)	0.000237 (0.268)	0.000413 (0.466)	0.000589 (0.665)
RDG Gearmotor Armature Inertia*		Ibf-in-sec ² (kg-cm ²)	0.000226 (0.255)	0.000401 (0.453)	0.000576 (0.651)

*Add armature inertia to gearing inertia for total inertia.

Radial Load and Bearing Life						
RPM	50	100	250	500	1000	3000
RDM060	250 Ibf (N) (1112)	198 (881)	148 (658)	116 (516)	92 (409)	64 (285)
RDG060	189 Ibf (N) (841)	150 (667)	110 (489)	88 (391)	70 (311)	48 (214)

Side load ratings shown above are for 10,000 hour bearing life at 25 mm from motor face at given rpm.

		Maximum Allowable Output Torque-Set by User Ibf-in (Nm)	Output Torque at Motor Speed for 10,000 Hour Life		
Model	Ratio		1000 RPM Ibf-in (Nm)	3000 RPM Ibf-in (Nm)	5000 RPM Ibf-in (Nm)
RDG060-004	4:1	603 (68.1)	144 (16.2)	104 (11.7)	88 (9.9)
RDG060-005	5:1	522 (58.9)	170 (19.2)	125 (14.1)	105 (11.9)
RDG060-010	10:1	327 (36.9)	200 (22.6)	140 (15.8)	120 (13.6)
RDG060-016	16:1	603 (68.1)	224 (25.3)	160 (18.1)	136 (15.4)
RDG060-020	20:1	603 (68.1)	240 (27.1)	170 (19.2)	146 (16.5)
RDG060-025	25:1	522 (58.9)	275 (31.1)	200 (22.6)	180 (20.3)
RDG060-040	40:1	603 (68.1)	288 (32.5)	208 (23.5)	180 (20.3)
RDG060-050	50:1	522 (58.9)	340 (38.4)	245 (27.7)	210 (23.7)
RDG060-100	100:1	327 (36.9)	320 (36.1)	280 (31.6)	240 (27.1)

Two torque ratings for the RDG gearmotors are given in the table above. The left hand columns give the maximum (peak) allowable output torque for the indicated ratios of each size RDG gearmotor. This is not the rated output torque of the motor multiplied by the ratio of the reducer.

It is possible to select a configuration of the motor selection and gear ratio such that the rated motor torque, multiplied by the gear ratio exceeds these ratings. It is the responsibility of the user to ensure that the settings of the system do not allow these values to be exceeded.

The right hand columns give the output torque at the indicated speed which will result in 10,000 hour life (L10). The setup of the system will determine the actual output torque and speed.

Gearing Reflected Inertia					
Single Reduction			Double Reduction		
Gear Stages	Ibf-in-sec ²	(kg-cm ²)	Gear Stages	Ibf-in-sec ²	(kg-cm ²)
4:1	0.0000132	(0.149)	16:1	0.0000121	(0.0137)
5:1	0.0000087	(0.00984)	20:1, 25:1	0.0000080	(0.00906)
10:1	0.0000023	(0.00261)	40:1, 50:1, 100:1	0.0000021	(0.00242)

Backlash and Efficiency		
	Single Reduction	Double Reduction
Backlash at 1% Rated Torque	10 Arc min	13 Arc min
Efficiency	91%	86%

Motor and Gearmotor Weights					
		RDM060 without Gears	RDG060 with 1 Stage Gearing	RDG060 with 2 Stage Gearing	Added Weight for Brake
1 Stack Stator		lb (kg)	3.0 (1.4)	7.5 (3.4)	9.3 (4.2)
2 Stack Stator		lb (kg)	4.1 (1.9)	8.6 (3.9)	10.4 (4.7)
3 Stack Stator		lb (kg)	5.2 (2.4)	9.7 (4.4)	11.5 (5.2)

RDM/G075

Rotary Motor Torque and Speed Ratings				
	Stator	1 Stack	2 Stack	3 Stack
	RPM at 48 VDC	4000	3000	2000
Continuous Torque	Ibf-in (Nm)	13 (1.46)	18.5 (2.09)	29 (3.28)
Peak Torque	Ibf-in (Nm)	18.9 (2.08)	28 (3.16)	41 (4.63)
Drive Current @ Continuous Torque	Amps	22	22	22
Operating Temperature Range ^a	-20 to 65° C (-40°C available, consult Exlar)			
Maximum Continuous Power Supply Current ^b	Amps	15	18	18

^aPower supply current is based on software current limit, not thermal limit. Consideration for peak current should also be considered when sizing power supplies.

For output torque of RDG gearmotors, multiply by ratio and efficiency. Please note maximum allowable output torques shown below.

^bRatings based on 40° C ambient conditions.

Inertia					Radial Load and Bearing Life						
	Stator	1 Stack	2 Stack	3 Stack	RPM	50	100	250	500	1000	3000
RDM Motor Armature Inertia (+/-5%)	Ibf-in-sec ² (kg-cm ²)	0.000545 (0.6158)	0.000973 (1.0996)	0.001401 (1.5834)	RDG075 Ibf (N) (1237)	278 (979)	220 (721)	162 (574)	129 (454)	102 (316)	71
RDG Gearmotor Armature Inertia ^c (+/-5%)	Ibf-in-sec ² (kg-cm ²)	0.000660 (0.7450)	0.001068 (1.2057)	0.001494 (1.6868)	RDG075 Ibf (N) (1526)	343 (1210)	272 (890)	200 (707)	159 (560)	126 (391)	88

^cAdd armature inertia to gearing inertia for total inertia.

Side load ratings shown above are for 10,000 hour bearing life at 25 mm from motor face at given rpm.

Gearmotor Mechanical Ratings			Output Torque at Motor Speed for 10,000 Hour Life		
Model	Ratio	Maximum Allowable Output Torque-Set by User Ibf-in (Nm)	1000 RPM Ibf-in (Nm)	2500 RPM Ibf-in (Nm)	4000 RPM Ibf-in (Nm)

AF = Absolute Feedback

III-II = Motor Stator, All 8 Pole

TDMX060 Stator Specifications

1B8-50 = 1 Stack, 48 VDC, 5000 rpm

2B8-50 = 2 Stack, 48 VDC, 5000 rpm

3B8-40 = 3 Stack, 48 VDC, 4000 rpm⁴

TDM/X075 Stator Specifications

1B8-30 = 1 Stack, 48 VDC, 3000 rpm

2B8-30 = 2 Stack, 48 VDC, 3000 rpm

3B8-20 = 3 Stack, 48 VDC, 2000 rpm⁴

JJJ = Voltage

048 = 12-48 VDC

KKK = Option Board

SIO = Standard IO Interconnect

IA4 = 4-20 mA Analog I/O

COP = CANOpen

CON = CANOpen, non-connectorized⁹

EIP = SIO plus Ethernet/IP with M12 connector

EIN = SIO plus Ethernet/IP without M12 connector⁹

PIO = SIO plus Profinet IO with M12 connector

PIN = SIO plus Profinet IO without M12 connector⁹

TCP = SIO plus Modbus TCP with M12 connector

TCN = SIO plus Modbus TCP without M12 connector⁹

MM = Mechanical Options

AR = External Anti-rotate

PF = Preloaded Follower²

L1/2/3 = External Limit Switches⁶

RB = Rear Brake

HW = Manual Drive, Handwheel with Interlock Switch (TDX075 only)

PB = Protective Bellows⁸

SR = Splined Main Rod^{7,10}

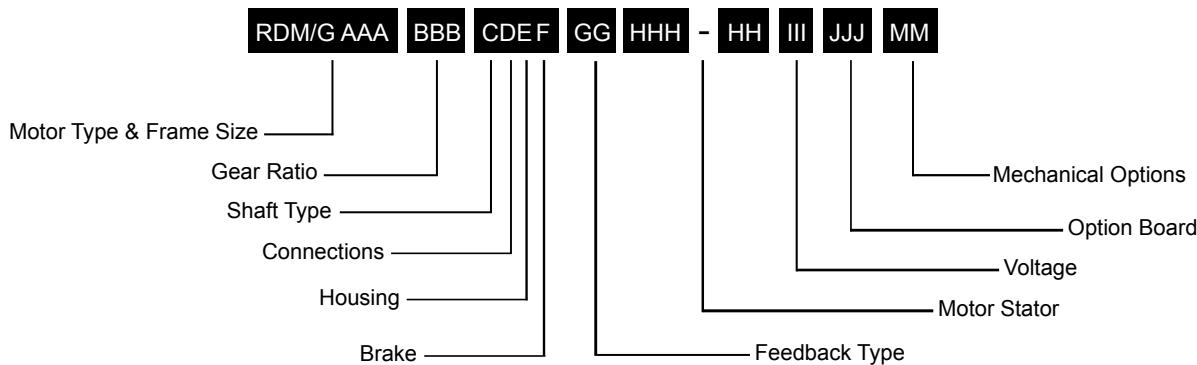

For options or specials not listed above or for extended temperature operation, please contact Exlar

NOTES:

1. Chrome-plated carbon steel. Threads not chrome-plated.
2. The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the standard non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the calculated travel life of the same size and lead of a non-pre loaded screw.
3. This housing option may indicate the need for special material main rods or mounting.

4. Not available on 0.1 inch lead.
5. For extended temperature operation consult factory for model number.
6. Limit switch option requires AR option.
7. This option is not sealed and is not suitable for any environment in which contaminants come in contact with actuator and may enter the actuator.
8. Not available with extended tie rod mounting option.
9. Requires customer supplied Ethernet cable through I/O port for Class 1 Division 2 compliance only.
10. Consult Exlar if ordering splined stainless steel main rod.
11. When ordering a TDM, RDM or RDG 60 mm or other sizes with top mounted connectors the battery backup for AF feedback must be mounted externally. A DIN rail mounted board and battery is supplied, Exlar PN 48224.

Clevis Pin for TDM/X060 Rod Clevis & Rear Clevis		CP050*
Clevis Pin for TDM/X075 Rear Clevis		CP075
Spherical Rod Eye for TDM/X060 male "M" rod end 3/8-24 thread		SRM038
Spherical Rod Eye for TDM/X075 male "M" rod end 7/16-20 thread		SRM044
Rod Eye for TDM/X075 male "M" rod end 7/16-20 thread		RE050
Rod Clevis for TDM/X060 male "M" rod end 3/8-24 thread		RC038
Rod Clevis for TDM/X075 male "M" rod end 7/16-20 thread		RC050
Jam Nut for TDM/X060 male rod end, 3/8-24		JAM3/8-24-SS
Jam Nut for TDM/X075 male rod end, 7/16-20		JAM7/16-20-SS

*Also available for TDM/X075 with RC050, RE050

CBL-T2USB485-M8-xxx

Our recommended communications cable. No special drivers or setup required for use with MS Windows™.

CBL-T2USB485-xxx

Use for terminal connections with CBL-TTCOM for long cable runs. No special drivers or setup required for use with MS Windows™.

CBL-TTCOM-xxx

Use with CBL-T2USB485-xxx for long cable runs.

CBL-TTDAS-xxx

For use with TT485SP for multi-drop applications.

TT485SP

RS485 communications splitter. Use to daisy-chain multiple Tritex actuators.

CON-TTCAN-SP

CAN splitter

CON-TTCAN-M
M12 Field wireable connector

TDCESF1

Surge filter designed for use on Tritex 48 VDC rotary and linear actuators provides EFT/B and surge disturbance immunity to IEC/EN 61800-3:2004-08 Second Environment (industrial) levels. Electrical Fast Transient/Burst (EET/B) and surge disturbances are caused by a number of events including switching inductive loads, relay contact bounce, power system switching activity or faults, nearby lightning strikes, etc.

FT SERIES

HIGH FORCE ROLLER SCREW ACTUATOR

Mount virtually any servo motor

Long stroke lengths available

High speed and long life

Motors shown in drawings are for
illustrative purposes only and are
not included with FT Actuators.

FT Series

Linear Actuators

High Performance

As with all Exlar roller screw products, the FT Series actuators deliver heavy load capacity, high speed capabilities, and exceptionally long life when compared to other linear actuator technologies.

Other comparably-sized screw actuator products on the market, specifically ball screw and acme screw actuators, have relatively low load capacities, short working lives and limited speed capabilities. At equivalent sizes, under moderate to heavy loads, it is reasonable to project that FT units will deliver up to 15 times the working life of those other methods. For OEM designers, this often means much more power and durability can be achieved from a much smaller footprint when Exlar FT units are used.

Contamination Protection

The FT Series design has all the contamination-isolation advantages of hydraulic cylinders without the limited load, life, and speed of designs built around ball or acme screws. The bearing and roller screw components in the Exlar FT Series force tubes are mounted within the sealed housing. This prevents abrasive particles and other contaminants from entering the actuator's critical mechanisms, and assures trouble-free operation even in the most severe environments.

FT Series actuators are provided with standard grease lubrication. Custom provisions can be made for oil filled lubrication.

Feature	Standard
Long Strokes	6 inch, 12 inch, 18 inch, 24 inch, 36 inch, and 48 inch
Multiple Actuator Mountings	Side Mount, Side Lug, Extended Tie Rods, Rear Clevis, Front Flange, Side Trunnion, Rear Flange, Front/Rear Flange
Multiple Motor Mounting Configurations	Inline Direct Drive, Parallel 1:1 Drive, Parallel, 2:1 Reduction

Engineered Compatibility

Exlar has removed much of the end-user-engineering burden by designing the FT series to be compatible with a wide variety of standard motors. Motor mounting, actuator mounting, and gearing configurations are available to meet nearly any application's requirements.

Exlar FT Series force tube actuators use a planetary roller screw mounted inside a telescoping tube mechanism. The follower is attached to the moveable force tube, which then extends and retracts as the screw rotates. An external motor (supplied by Exlar or the customer) provides the rotational force.

Technical Characteristics	
Frame Sizes - in (mm)	3.5 (90), 4.8 (120), 6.0 (150), 8.0 (200)
Screw Leads - in (mm)	0.2 (5), 0.25 (6), 0.4 (10), 0.5 (12), 0.8 (20), 1.2 (30)

The robust design of the FT series actuator can survive the rugged environment of a sawmill while providing accurate positioning at high rates and with high force.

With their high thrust capability, compact size and smooth controlled motion, FT Series actuators are an ideal replacement for hydraulics or pneumatics on injection mold toggles. Control improvements from an electromechanical servo system offer less abuse of valuable molds and more consistent performance.

Motors shown in drawings are for illustrative purposes only and are not included with FT Actuators.

FT Series Linear Actuators

DEFINITIONS:

Maximum Force: Calculated Cubic Mean Load for the application should not exceed this value. (Values are derived from the design capacity of the FT Series actuator and should not be exceeded or relied upon for continuous operation.)

Life at Maximum Force: Estimated life that can be expected from the actuator when running at Maximum Force for intermittent periods of time. (Theoretical calculation based on the Dynamic Load Rating of the actuator and using the Maximum Force rating as the Cubic Mean Load.)

C_a (Dynamic Load Rating): A design constant used when calculating the estimated travel life of the roller screw.

Maximum Input Torque: The torque required at the screw to produce the Maximum Force rating. Exceeding this value can cause permanent damage to the actuator.

Maximum Rated RPM: The maximum allowable rotational screw speed determined by either screw length limitations or the rotational speed limit of the roller screw nut.

Maximum Linear Speed: The linear speed achieved by the actuator when Maximum Rated RPM is applied to the roller screw input shaft.

FT Series Accessories

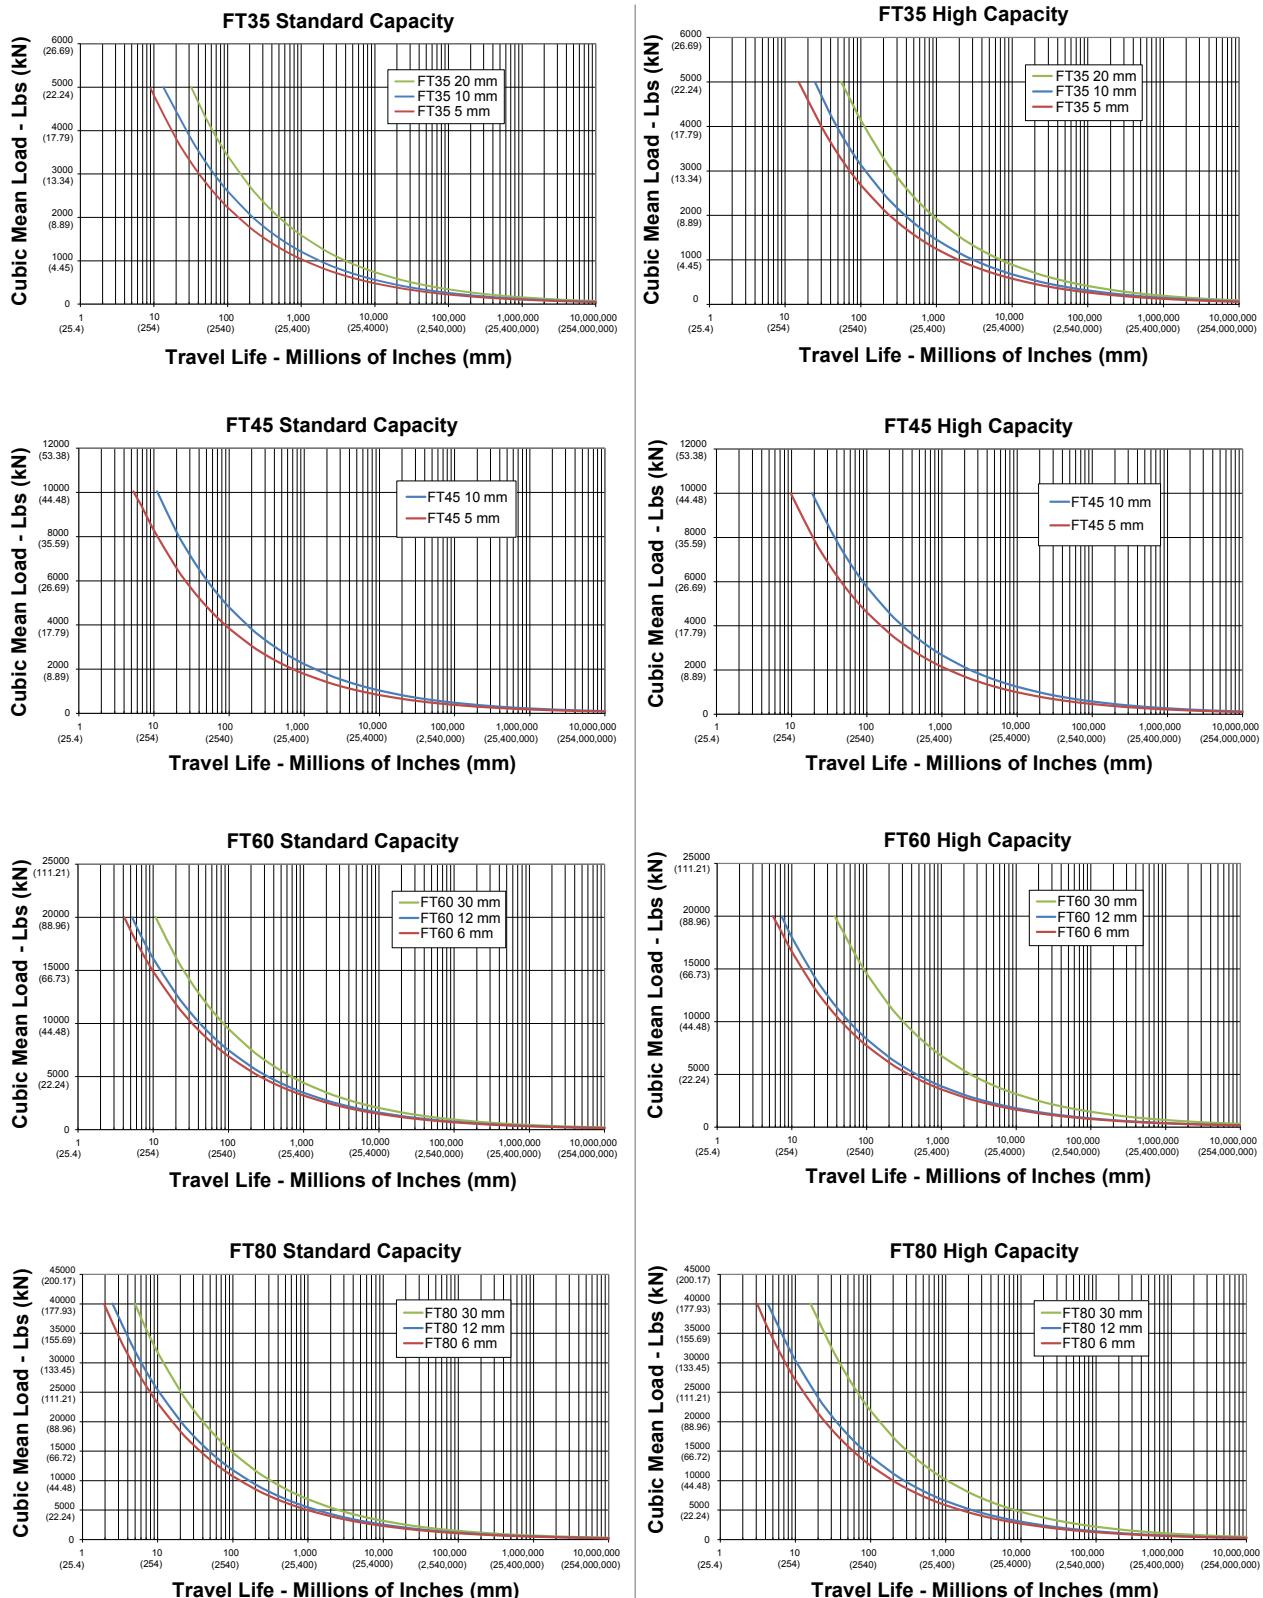

Limit Switches (if required in addition to L1, L2, L3 option in actuator model)			
FT35, FT60, FT80			
Option	Quantity	Part Number	Description
L1	1	14453	Normally Closed PNP Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L2	2	14453	Normally Closed PNP Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L3	3	14453	Normally Closed PNP Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L4			NA
L5			NA
L6			NA
FT45			
L1	1	43403	Normally Open PNP Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L2	2	43404	Normally Closed PNP Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L3	1	43403	Normally Open PNP Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L3	2	43404	Normally Closed PNP Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L4	1	67634	Normally Open NPN Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L5	2	67635	Normally Closed NPN Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L6	1	67634	Normally Open NPN Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)
L6	2	67635	Normally Closed NPN Limit Switch (10-30 VDC, 1m. 3 wire embedded cable)

Consult your local sales representative to discuss maximum stroke length allowable with your final configuration.

Some accessories are available in stainless steel. Consult Exlar for availability and lead time.

*This option restricts max. load to 6.0 KN (1350 lbf) for K60, 8.9 KN (2000 lbf) for K75 and 9.3 KN (2100 lbf) for K90.

Estimated Service Life

FT Series Linear Actuators

Service Life Estimate Assumptions:

- Sufficient quality and quantity of lubrication is maintained throughout service life (please refer to engineering reference on page 212 for lubrication interval estimates.)
- Bearing and screw temperature between 20° C and 40° C
- No mechanical hard stops (external or internal) or impact loads
- No external side loads
- Does not apply to short stroke, high frequency applications such as fatigue testing or short stroke, high force applications such as pressing. (For information on calculating estimating life for unique applications please refer to the engineering reference on page 212.

The L_{10} expected life of a roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained roller screws manufactured are expected to meet or exceed. This is not a guarantee and these charts should be used for estimation purposes only.

The underlying formula that defines this value is:

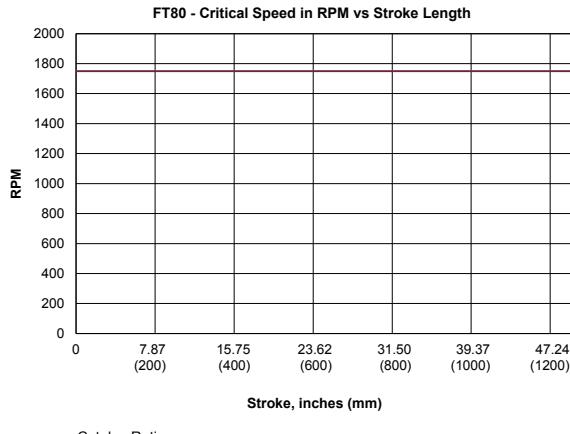

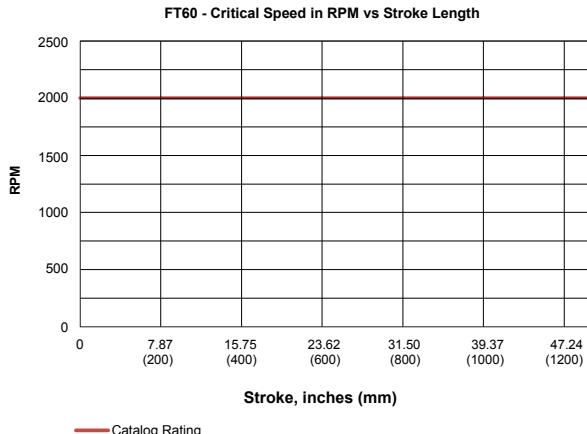

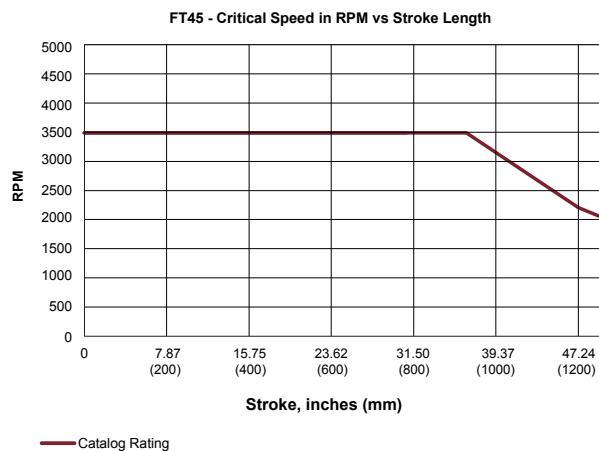

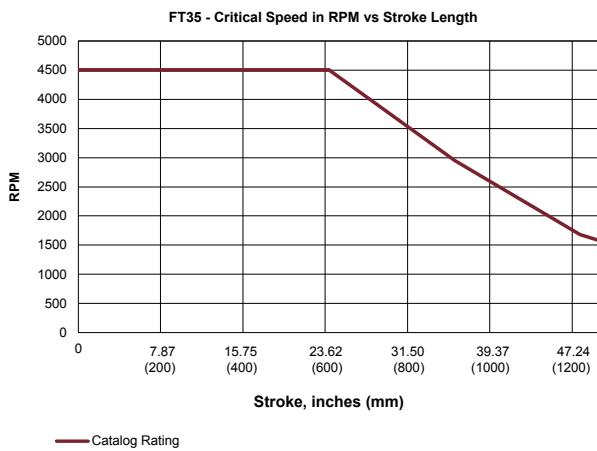

Travel life in millions of inches, where:

$$C_a = \text{Dynamic load rating (lbf)} \\ F_{cml} = \text{Cubic mean applied load (lbf)} \\ \ell = \text{Roller screw lead (inches)}$$
$$L_{10} = \left(\frac{C_a}{F_{cml}} \right)^3 \times \ell$$

For additional details on calculating estimated service life, please refer to the Engineering Reference, page 212.

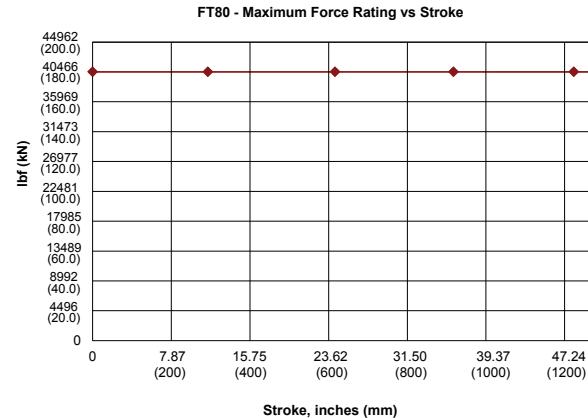

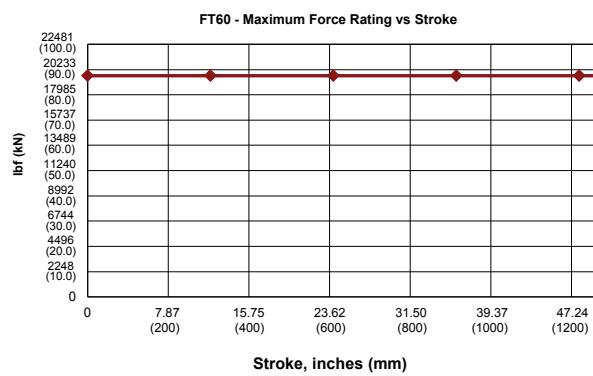

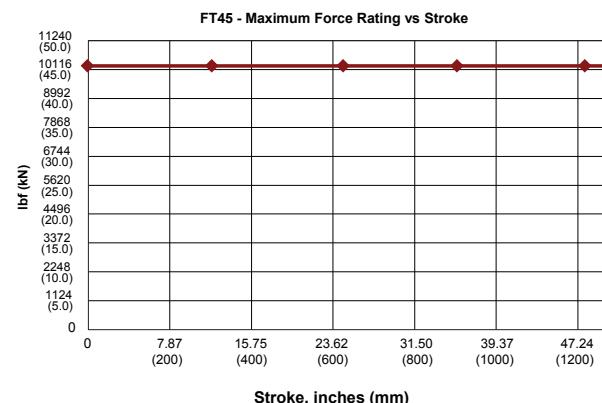

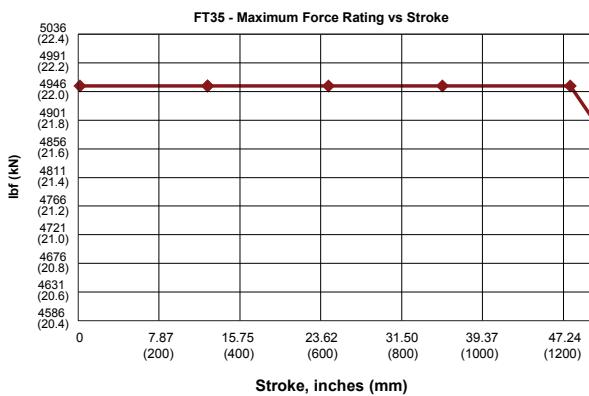

Data Curves

Critical Speed vs Stroke Length:

* With longer stroke length actuators, the rated speed of the actuator is determined by the critical speed

Maximum Force Rating

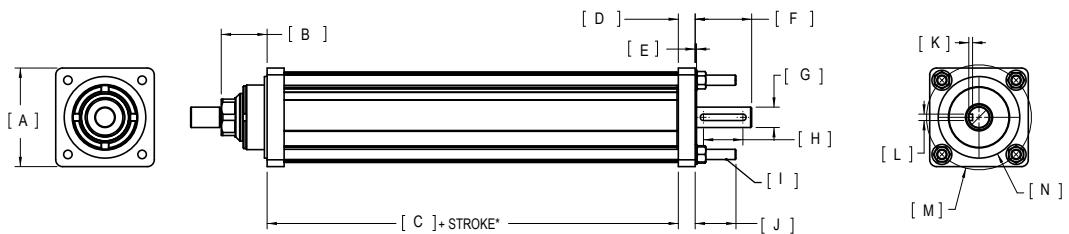

* With longer stroke length actuators, the rated speed of the actuator is determined by the critical speed

Limit Switches

(adjustable position throughout stroke)
L1 = One N.C., PNP (FT35, 45, 60, 80)
L2 = Two N.C., PNP (FT35, 45, 60, 80)
L3 = Three N.C., PNP (FT35, 45, 60, 80)
L4 = One N.O., NPN (FT45)
L5 = Two N.C., NPN (FT45)
L6 = One N.O., NPN & Two N.C., NPN (FT45)

*See Page 124 for Limit Switch details

Please provide a drawing of motor dimensions with all orders to insure proper mounting compatibility.

For options or specials not listed above or for extended temperature operation, please contact Exlar

NOTES:

1. Mounting face size, shaft length and other details of particular motors may require special adapters or provisions for mounting. Always discuss your motor selection with your local sales representative.
2. For extended temperature operation consult factory for model number.
3. MAX Std. motor size: FT35: 5.6 inch/165 mm, FT45: 7.1 inch/215 mm, FT60: 7.9 inch/215 mm, FT80: 8.5 inch/300 mm
For oversized motors, contact your local sales representative.
4. Not available with inline motor mount, contact your local sales representative.
5. Application details must be approved for use with an FT80.
6. IP65 environmental sealing option not available.

Contact your local sales representative regarding all special actuator components.

K SERIES

MEDIUM FORCE ROLLER SCREW ACTUATOR

Mount virtually any servo motor

Long stroke lengths available

High speed and long life

K Series Linear Actuators

K Series

Linear Actuators

Exlar K Series actuators offer advanced roller screw technology in varying performance levels and allow the use of third-party motors.

A Universal Design for Ultimate Flexibility

The K Series actuator provides an ideal replacement for pneumatic and hydraulic cylinders in linear motion control applications. Unlike most suppliers who employ ballscrews, Exlar K Series linear actuators utilize a planetary roller screw, assuring long life and high resistance to shock. This feature makes Exlar actuators far superior to alternative methods for applying all-electric linear actuation in industrial and military applications.

K Series actuators are offered in 60, 75 and 90 mm frame sizes with dimensions and form-factor consistent with ISO Metric pneumatic cylinder specifications. This allows convenient substitution of Exlar actuators for existing pneumatic and hydraulic actuators.

Operating Conditions and Usage		
Efficiency:		
Motor Inline	%	80
Motor Parallel	%	80
Ambient Conditions:		
Standard Ambient Temperature	°C	0 to 65
Extended Ambient Temperature*	°C	-30 to 65
Storage Temperature	°C	-40 to 85
IP Rating		IP65S

*Consult Exlar for extended temperature operation.

Two Performance Grades to Meet Your Exact Application Needs and Budget

K Series actuators from Exlar provide a truly universal solution for linear motion rod style actuator applications. Two grades of planetary roller screws for dynamic applications are offered. These choices allow you to realize the travel life required for the application while meeting budget constraints.

KX Series actuators provides high performance planetary roller screw performance that is far superior to any other available rotary-to-linear conversion technologies. The KX Series is the ideal choice for demanding applications in industrial automation, mobile equipment, military, process control, or many other applications where millions of inches of travel under load is expected.

KM Series actuators employ a lower cost planetary roller screw design suited for applications that do not require the long life offered in the KX Series. This option still provides twice the life of similarly sized ball screw actuators along with the efficiency and shock resistance associated with roller screws.

The Exlar Advantage

Universal Mounting Options

The K Series offers a wide variety of fixed and adjustable mounting accessories consistent with NFPA inch and ISO Metric pneumatic cylinder standards. The mounting options include:

- Front Flange
- Rear Flange
- Foot Mount
- Rear Eye
- Adjustable Side Trunnions
- Rear Clevis (parallel and inline motor)
- End Angles

Standard Actuator Construction

The standard K Series actuator design includes an anodized aluminum housing offering a high level of corrosion resistance in many environments. The standard main rod is plated steel with a stainless steel rod end insert, providing excellent wear characteristics.

Sealed Body Design

The standard body design of the K Series provides an IP54S sealed housing. IP65S sealing is standard when an inline or parallel motor mount is specified. This feature allows the actuator to be used in applications where water spray is present.

Motor Mounting Options

The K Series allows for complete flexibility in the type and style of motor to drive the actuator. Types of motors compatible with K Series actuators include DC motor, stepper, and servo motors. The K Series can be ordered as a base unit without motor mounting, allowing you to manufacture your own mount.

For convenience these actuators are available with preconfigured motor mounts. Exlar maintains a large library of motor mounting dimension information for most manufacturers' servos and stepper motors.

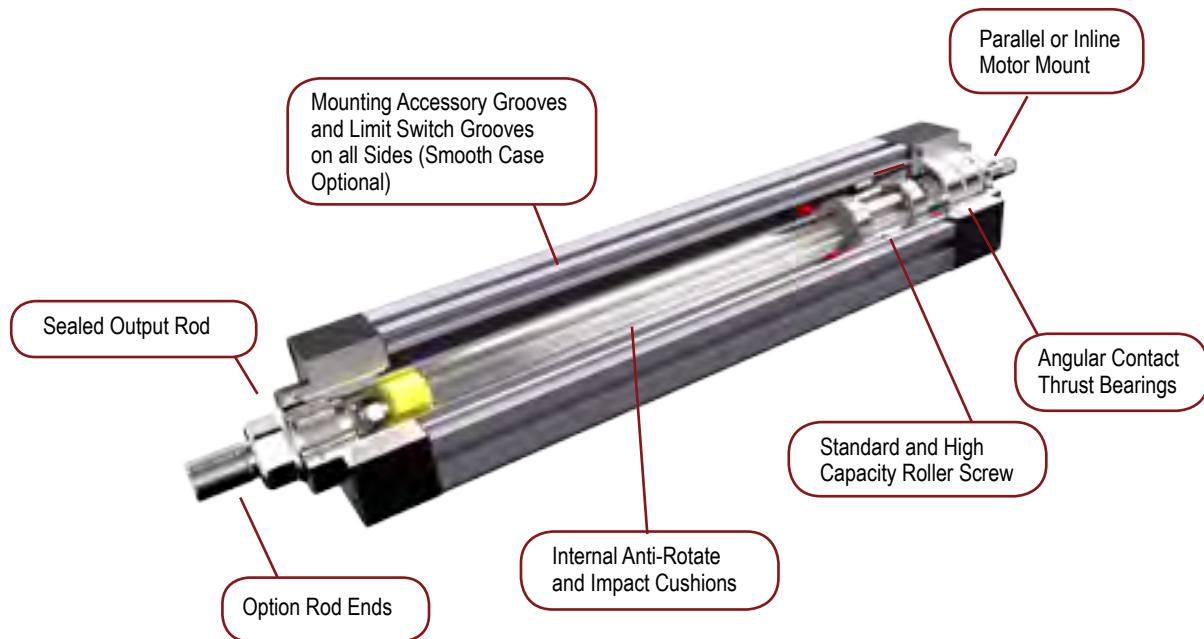

The inline mount places the motor on the input end of the actuator and allows the most compact form factor. In addition, Exlar offers a clevis mount attached to the rear of the inline-mounted motor for rear mounting.

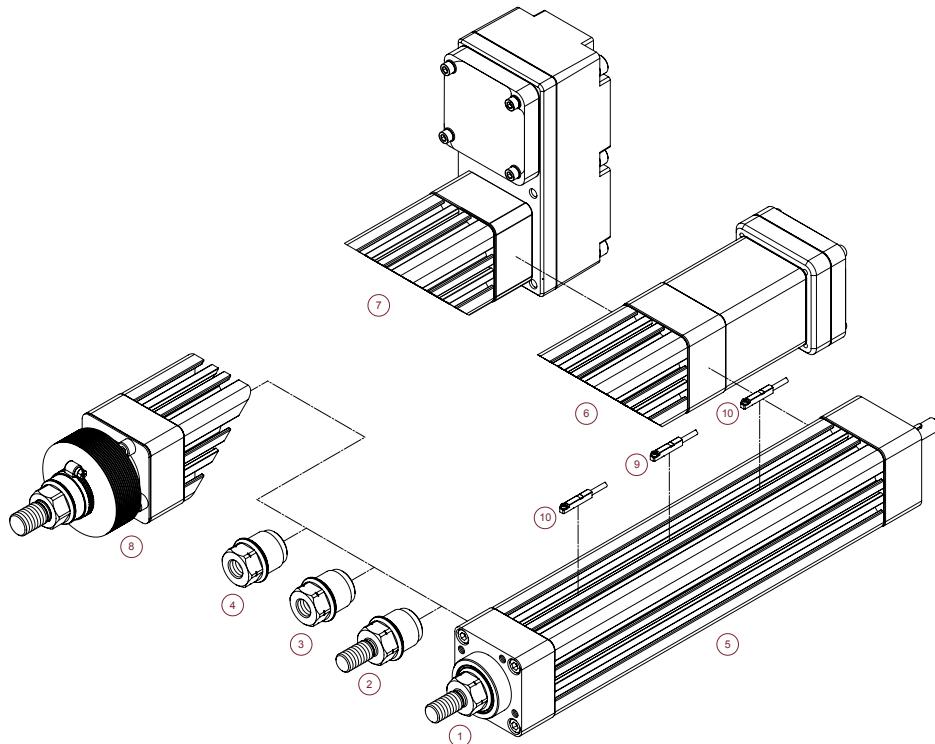

The parallel motor mounts (side mount) utilize a belt drive system to transmit the motor torque to the actuator input shaft. Belt reductions of 1:1 and 2:1 are offered, allowing you to conveniently match the speed and output force to properly apply your K Series actuator to your specific application.

K Series Linear Actuators

Product Features

- 1-Male, US Standard thread and Male, US Standard thread, SS
- 2-Male Metric thread and Male Metric thread, SS
- 3-Female US Standard thread and Female US Standard thread, SS
- 4-Female Metric thread and Female Metric thread, SS
- 5-Drive shaft only, no motor mount
- 6-Inline, includes shaft coupling
- 7-Parallel, 1:1 belt reduction-Custom Ratio, (ex. P13 = 1.3:1 belt reduction), Parallel, 1:1 belt reduction-Custom Ratio, (ex. S13 = 1.3:1 belt reduction)
- 8-Protective bellows for extending rod
- 9-External Limit Switches - N.O., PNP
- 10-External Limit Switches - N.C., PNP

Test

Test stands

The smooth and accurate motion of Exlar's actuators combined with today's servo technology make multiple degree of freedom motion simulation applications easier to implement, cleaner and more efficient than hydraulic solutions.

DEFINITIONS:

Maximum Force: Calculated Cubic Mean Load for the application should not exceed this value. (Values are derived from the design capacity of the FT Series actuator and should not be exceeded or relied upon for continuous operation.)

Life at Maximum Force: Estimated life that can be expected from the actuator when running at Maximum Force for intermittent periods of time. (Theoretical calculation based on the Dynamic Load Rating of the actuator and using the Maximum Force rating as the Cubic Mean Load.)

C_a (Dynamic Load Rating): A design constant used when calculating the estimated travel life of the roller screw.

Maximum Input Torque: The torque required at the screw to produce the Maximum Force rating. Exceeding this value can cause permanent damage to the actuator.

Maximum Rated RPM: The maximum allowable rotational screw speed determined by either screw length limitations or the rotational speed limit of the roller screw nut.

Maximum Linear Speed: The linear speed achieved by the actuator when Maximum Rated RPM is applied to the roller screw input shaft.

K Series Linear Actuators

Estimated Service Life

Service Life Estimate Assumptions:

- Sufficient quality and quantity of lubrication is maintained throughout service life (please refer to engineering reference on page 212 for lubrication interval estimates.)
- Bearing and screw temperature between 20° C and 40° C
- No mechanical hard stops (external or internal) or impact loads
- No external side loads
- Does not apply to short stroke, high frequency applications such as fatigue testing or short stroke, high force applications such as pressing. (For information on calculating estimating life for unique applications please refer to the engineering reference on page 212.

The L_{10} expected life of a roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained roller screws manufactured are expected to meet or exceed. This is not a guarantee and these charts should be used for estimation purposes only.

The underlying formula that defines this value is:
Travel life in millions of inches, where:

$$C_a = \text{Dynamic load rating (lbf)} \\ F_{cml} = \text{Cubic mean applied load (lbf)} \\ \ell = \text{Roller screw lead (inches)}$$

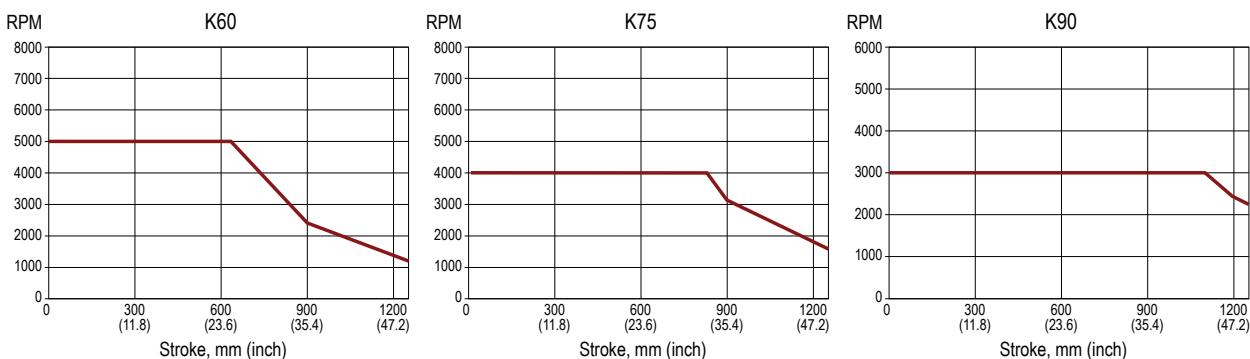

$$L_{10} = \left(\frac{C_a}{F_{cml}} \right)^3 \times \ell$$

For additional details on calculating estimated service life, please refer to the Engineering Reference, page 212.

K Series Linear Actuators

Data Curves

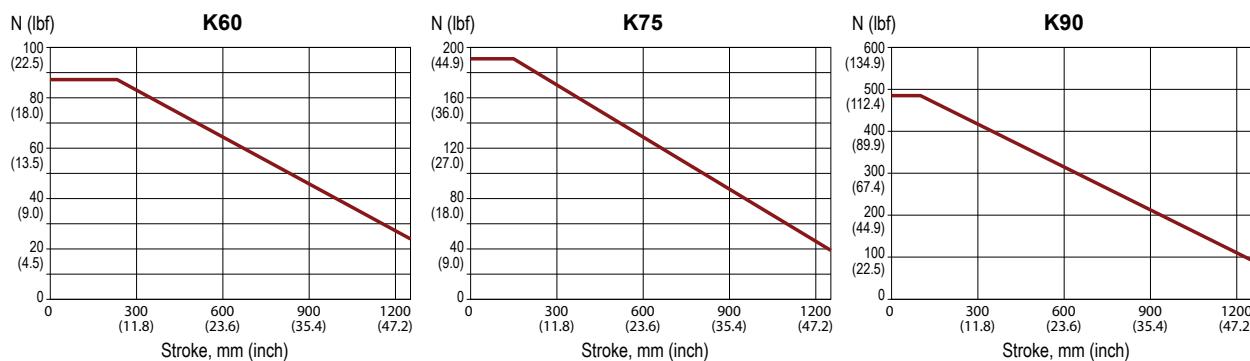

Critical Speed vs Stroke Length:

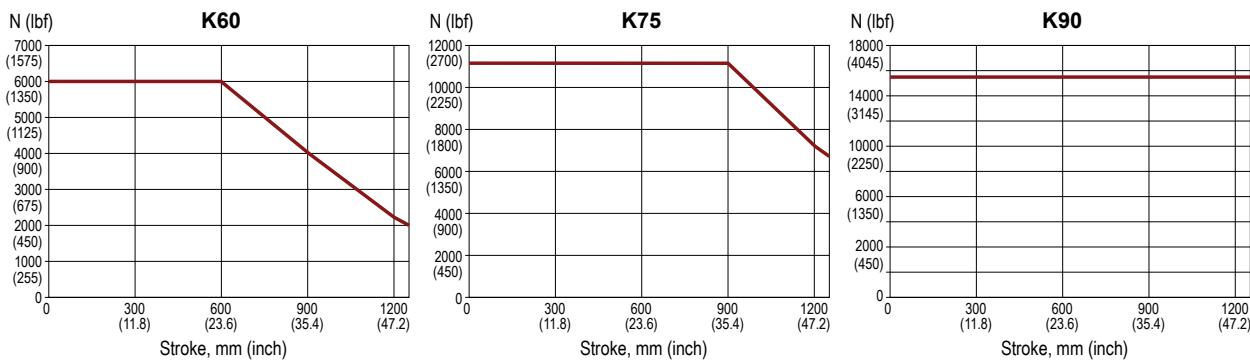

— Actuator Rated Speed
speed at which we have tested and rated the actuator

* With longer stroke length actuators, the rated speed of the actuator is determined by the critical speed

Maximum Side Load:

Rated Force vs Stroke:

Options

PB = Protective Bellows

This option provides an accordion style protective bellows to protect the main actuator rod from damage due to abrasives or other contaminants in the environment in which the actuator must survive. The standard material of this bellows is S2 Neoprene Coated Nylon, Sewn Construction. This standard bellows is rated for environmental temperatures of -40 to 250 degrees F. Longer strokes may require the main rod of the actuator to be extended beyond standard length. Not available with extended tie rod mounting option. Please contact your local sales representative.

L1 ... L6 = Adjustable External Travel Switches

This option allows up to 3 external switches to be included. These switches provide travel indication to the controller and are adjustable.

Limit Switches (if required in addition to L1, L2, L3 option in actuator model)			
Option	Quantity	Part Number	Description
L1	1	43403	Normally Open PNP Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)
L2	2	43404	Normally Closed PNP Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)
L3	1	43403	Normally Open PNP Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)
	2	43404	Normally Closed PNP Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)
L4	1	67634	Normally Open NPN Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)
L5	2	67635	Normally Closed NPN Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)
L6	1	67634	Normally Open NPN Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)
	2	67635	Normally Closed NPN Limit Switch (10-30 VDC, 1m, 3 wire embedded cable)

Consult your local sales representative to discuss maximum stroke length allowable with your final configuration.

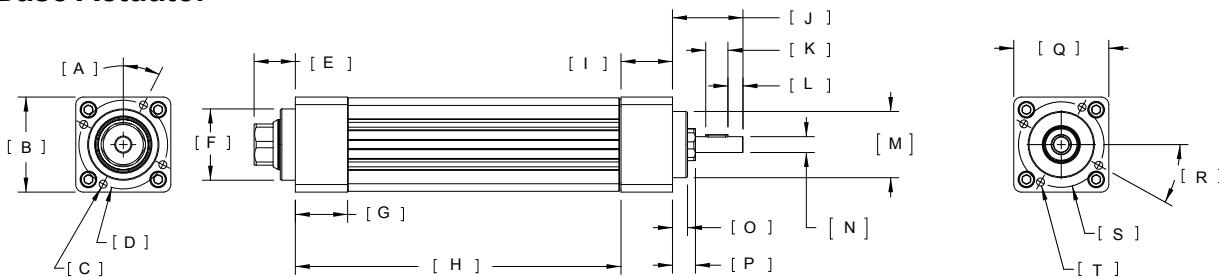

Some accessories are available in stainless steel. Consult Exlar for availability and lead time.

*This option restricts max. load to 6.0 KN (1350 lbf) for K60, 8.9 KN (2000 lbf) for K75 and 9.3 KN (2100 lbf) for K90.

Parallel Mount Housing Width and Rear Flange/Clevis Mount Options

When selecting a parallel mount for your K Series actuator, the table at right indicates what size drive housing will be mounted to your actuator. If your application also requires a rear flange, rear clevis or rear eye, please select the appropriate attachment based on the size of the drive housing.

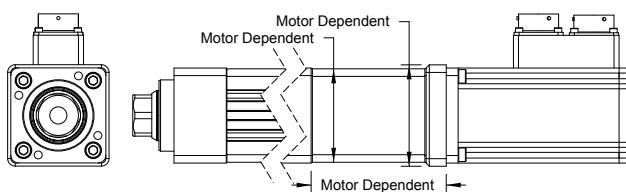

Actuator Frame Size	Mounted Motor Frame Size ¹	Belt Reduction Ratio ²	Parallel Drive Housing Width ³	Optional Rear Flange	Optional Rear Clevis	Optional Rear Eye
K60	60 mm	1:1	66 mm	KSRF-60-66	KSRC-60 (English)/ KSMC-60 (Metric)	KSRE-60 (English)/ KSME-60 (Metric)
	60 mm	2:1	96 mm	KSRF-60-96		
	60 mm	1:1 or 2:1	96 mm	KSRF-60-96		
K75	60 mm	1:1	86 mm	KSRF-75-86	KSRC-75 (English)/ KSMC-75 (Metric)	KSRE-75 (English)/ KSME-75 (Metric)
	90 mm	1:1	96 mm	KSRF-75-96		
	75 mm	2:1	130 mm	KSRF-75-130		
	115 mm	1:1	130 mm	KSRF-75-130		
K90	60 or 90 mm	1:1	96 mm	KSRF-90-96	KSRC-90 (English)/ KSMC-90 (Metric)	KSRE-90 (English)/ KSME-90 (Metric)
	60 mm	1:1 or 2:1	96 mm	KSRF-90-96		
	90 mm	1:1 or 2:1	130 mm	KSRF-90-130		
	115 mm	1:1	130 mm	KSRF-90-130		

¹ Motor sizes above are based on Exlar's product offering. Other manufacturers' motors of comparable size may also be mounted.

² Consult Exlar for special belt reduction ratios.

³ See drawings for parallel drive housing dimensions.

Commonly Ordered Options Shown in **BOLD**

Actuator Series

KX = High Capacity Roller Screw

KM = Standard Capacity Roller Screw

AA = Actuator Frame Size

60 = 60 mm (2.375 inch)

75 = 75 mm (2.95 inch)

90 = 90 mm (3.54 inch)

BBBB = Stroke Length (mm)

0020-1225 mm (25 mm increments)

0150 = 150 mm

0300 = 300 mm

0600 = 600 mm

0900 = 900 mm

CC = Lead (linear motion per screw revolution)

05 = 5 mm (0.2 inch) roller screw only

10 = 10 mm (0.4 inch) roller screw only

D = Mounting Options

N = None, Base Unit

E = Rod Options

M = Male, US Standard thread

A = Male Metric thread

F = Female US Standard thread

B = Female Metric thread

W = Male, US Standard thread, SS¹

R = Male Metric thread, SS¹

V = Female US Standard thread, SS¹

L = Female Metric thread, SS¹

FFF = Input Drive Provisions

NMT = Drive shaft only, no motor mount

ISC = Inline, includes shaft coupling

Keyed Motor Shaft Options

P10 = Parallel, 1:1 belt reduction

P20 = Parallel, 2:1 belt reduction

Smooth Motor Shaft Options

S10 = Parallel, 1:1 belt reduction

S20 = Parallel, 2:1 belt reduction

GGG = Motor Mount Provisions³

See page 206 for Motor Mount Code.

MM = Mechanical Options⁴

PB = Protective bellows for extending rod

Limit Switches²

L1 = One N.O., PNP

L2 = Two N.C., PNP

L3 = One N.O. PNP & two N.C., PNP

L4 = One N.O., NPN

L5 = Two N.C., NPN

L6 = One N.O., NPN & two N.C., NPN

*See Page 149 for Limit Switch details.

For options or specials not listed above or for extended temperature operation, please contact Exlar

NOTES:

1. SS rod end on plated SS rod.
2. Not available with SE option.
3. For oversized motors, contact your local sales representative.
4. For extended temperature operation consult factory for model number.

SLM/SLG SERIES

BRUSHLESS AC OR DC SERVO MOTOR / INTEGRATED SERVO GEARMOTOR

Compatible with virtually any manufacturer's servo drive

Multiple frame size options

SLM Series Motors and SLG Series Integrated Gearmotors

Description

Brushless servo motor and gearmotor technology from Exlar provides one of the highest torque-to-size ratio available in motion control today. Small size, outstanding performance specifications, quality and customization capabilities offer you the right solution for your motion control application.

Unique T-LAM Stator Design Advantage

This innovative design offers several advantages over traditional motor winding for a more efficient and powerful motor.

Built for durability, T-LAM segmented lamination stator technology consists of individual segments, each containing individual phase wiring for maximum motor performance. The robust insulation, high coercive strength magnets, and complete thermal potting provide a more robust motor design, a design yielding a 35 to 70% torque increase in the same package size! T-LAM motor designs have Class 180H insulation systems and UL recognition.

Customizing to Suit Your Requirements

Exlar has the capability to manufacture to meet your OEM requirements. Whatever your special requirements are—custom shafts, custom mountings, custom stators, custom housing materials—please contact your local sales representative to discuss your needs.

Very High Torque Density

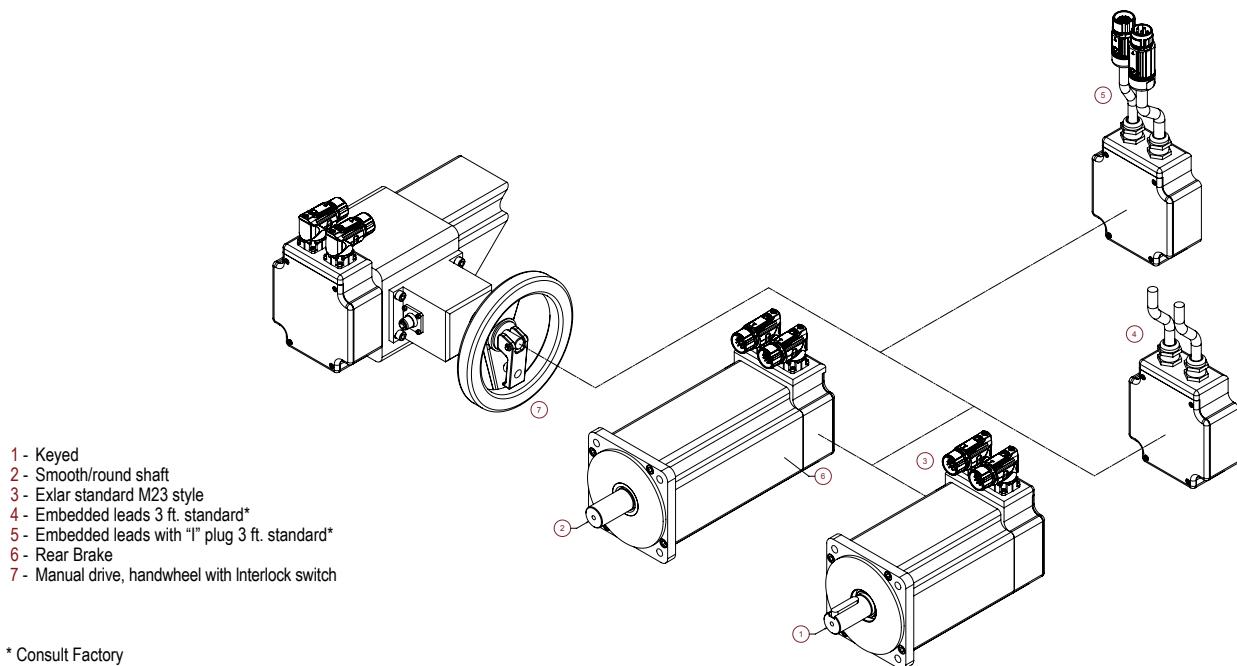

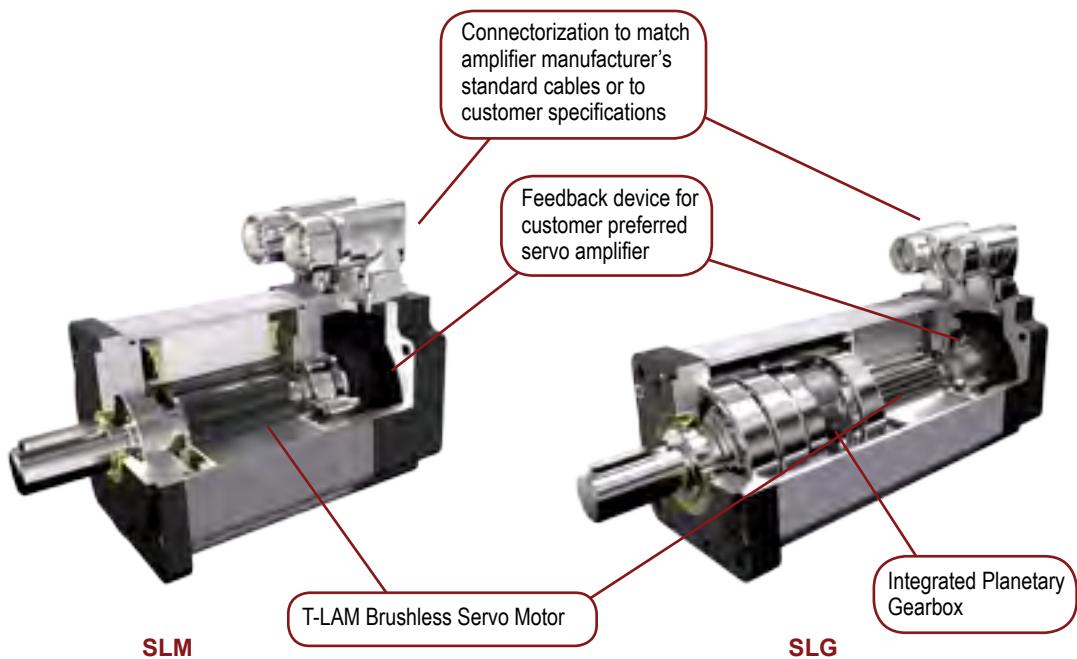

T-LAM technology produces an efficient and powerful motor in a very small package.

- **60 mm SLM060** offers continuous torque up to 15 lbf-in and base speed of 5000 rpm.
- **75 mm SLM075** offers continuous torque up to 36 lbf-in and base speed of 4000 rpm.
- **90 mm SLM090** offers continuous torque up to 56 lbf-in and base speed of 4000 rpm.
- **115 mm SLM115** offers continuous torque up to 176 lbf-in and base speed of 3000 rpm.
- **142 mm SLM142** offers continuous torque up to 237 lbf-in and base speed of 2400 rpm.
- **180 mm SLM180** offers continuous torque up to 612 lbf-in and base speed of 2400 rpm.

Standard Features	
SLM Motor	SLM Motor Standard Features
	UL recognized component IP65S sealing
	Right angle rotatable connectors, embedded leads, or embedded leads with cable plugs
	Feedback configurations for nearly all servo amplifiers
	Anodized housings
	Class 180H insulation system
SLG Gearmotor	All features of SLM motor shown above plus...
	High side load bearing design
	Integrated armature and sungear
	Higher stiffness than bolt-on gearhead and motor
	10 arc minute standard backlash, single stage; 13 arc minute standard backlash, dual stage
	Single and double reduction ratios: 4:1, 5:1, 10:1, 16:1, 20:1, 25:1, 40:1, 50:1, and 100:1

Glass Manufacturing

Exlar brushless motors are the highest performance with very compact size. This makes them perfect for high-speed labeling and demanding conveyor drive applications.

The FT Series combined with SLM/G Series motors provides a complete Exlar actuator solution for applications requiring heavy load capacity and high speeds. The motor can be configured to operate with nearly any manufacturer's servo amplifier.

SLM Series Motors/SLG Series Gearmotors

SLG Series Gearmotor General Performance Specifications

Two torque ratings for the SLG Series Gearmotors are given in the table below. The left hand columns give the maximum (peak) allowable output torque for the indicated ratios of each size SLG Series Gearmotor. This is NOT the rated output torque of the motor multiplied by the ratio of the reducer.

It is possible to select a configuration of the motor selection and gear ratio such that the rated motor torque, multiplied by the gear ratio exceeds these ratings. It is the responsibility of the user to ensure that the settings of the system, including the amplifier, do not allow these values to be exceeded.

The right hand columns give the output torque at the indicated speed which will result in 10,000 hour (L10). The setup of the system, including the amplifier, will determine the actual output torque and speed.

Speed and Torque Curves

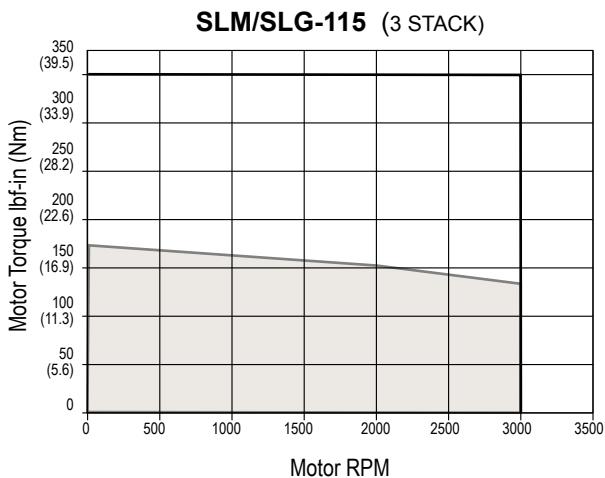

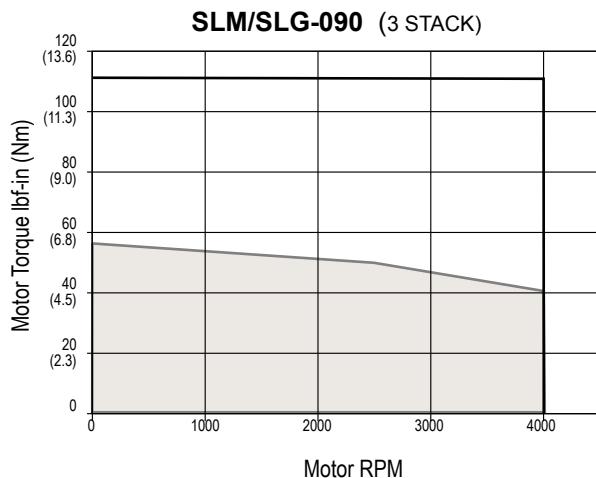

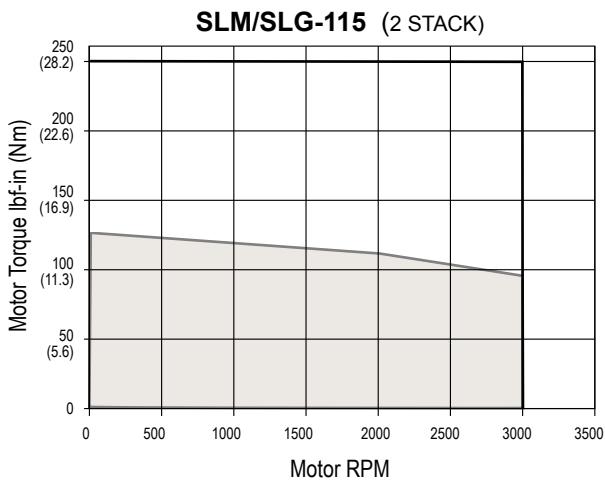

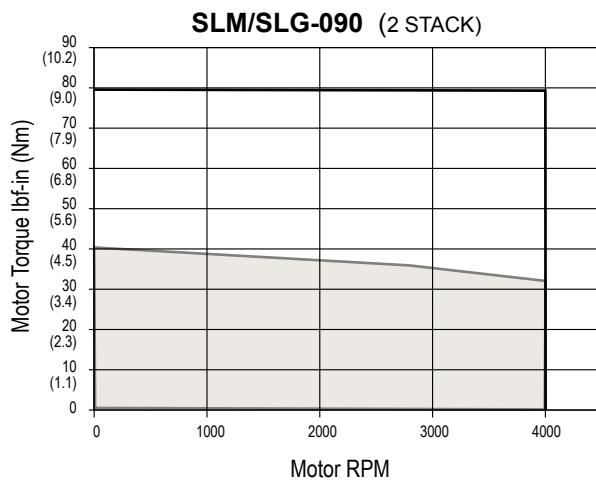

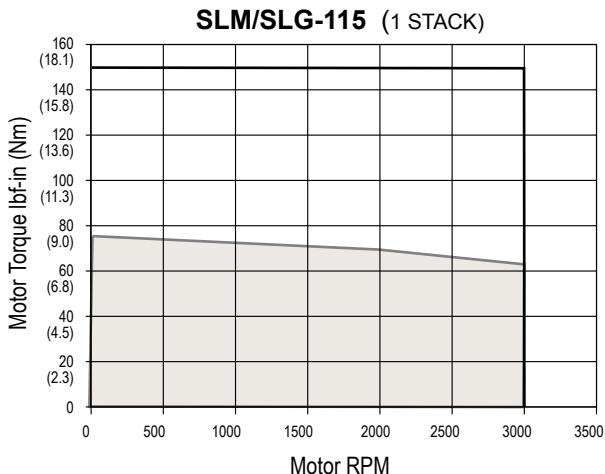

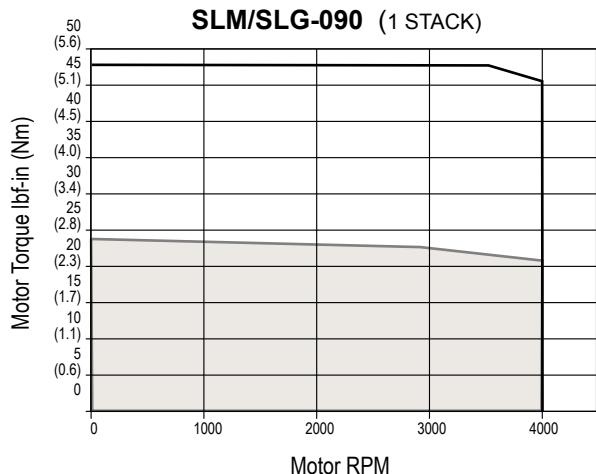

These speed vs. torque curves represent approximate continuous torque ratings at the indicated rpms. Different types of servo amplifiers offer varying motor torque.

— Peak Torque
— Continuous Torque

Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 1/4" on SLM/SLG060 and 10" x 10" x 3/8" on SLM/SLG075 at 25° C ambient.
For gearmotors, divide speed by gear ratio; multiply torque by gear ratio and efficiency. Efficiencies: 1 Stage = 0.91, 2 Stage = 0.86

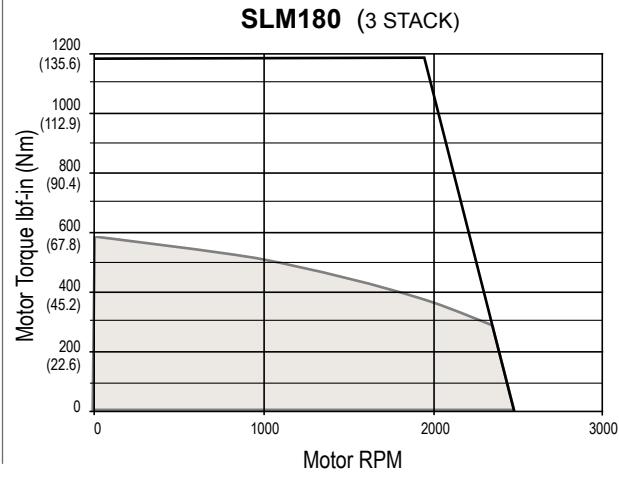

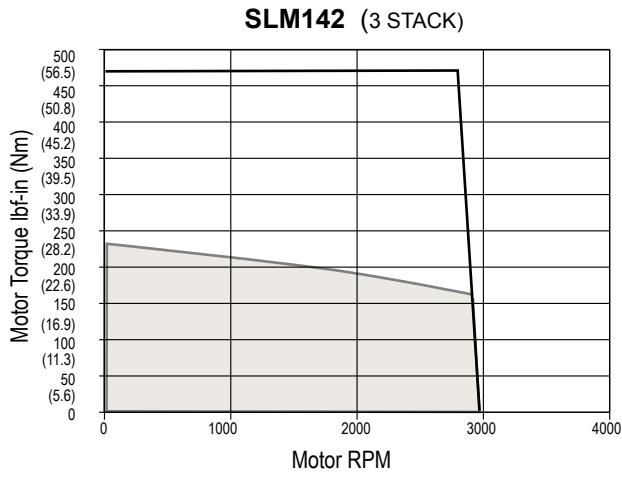

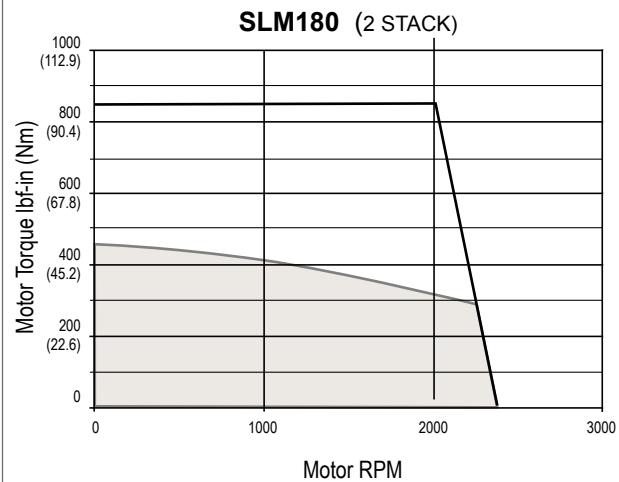

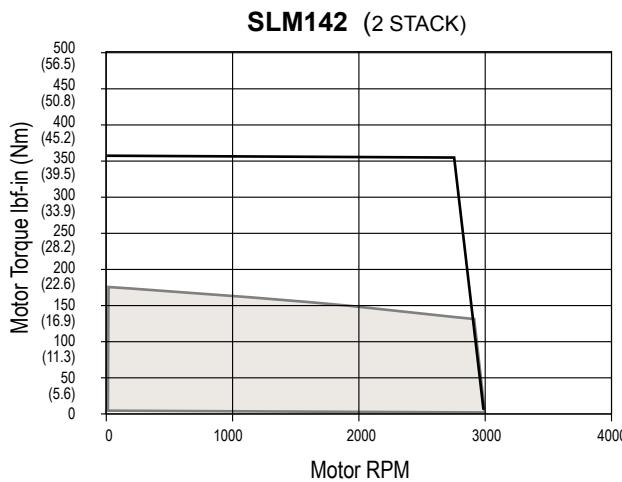

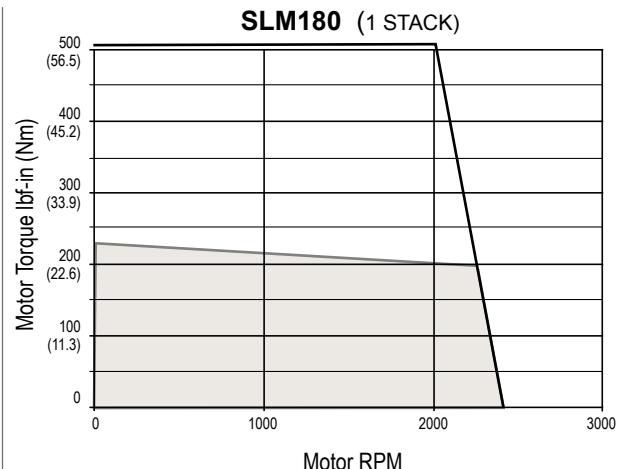

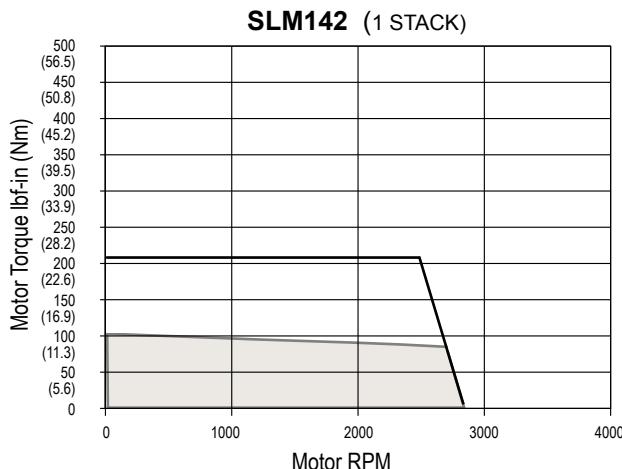

SLM Series Motors/SLG Series Gearmotors

Test data derived using NEMA recommended aluminum heatsink 10" x 10" x 3/8" on SLM/SLG090 and 12" x 12" x 1/2" on SLM/SLG115 at 25°C ambient.
For gearmotors, divide speed by gear ratio; multiply torque by gear ratio and efficiency. Efficiencies: 1 Stage = 0.91, 2 Stage = 0.86

— Peak Torque
■ Continuous Torque

SLM Series Motors/SLG Series Gearmotors

Test data derived using NEMA recommended aluminum heatsink 12" x 12" x 1/2" on SLM142 at 25°C ambient.

For gearmotors, divide speed by gear ratio; multiply torque by gear ratio and efficiency.
Efficiencies: 1 Stage = 0.91, 2 Stage = 0.86

— Peak Torque
■ Continuous Torque

Test data derived using NEMA recommended aluminum heatsink 16" x 16" x 1" on SLM180 at 25°C ambient

SLM Series Motors/SLG Series Gearmotors

Options

Motor Speed

All Exlar T-LAM motors and actuators carry a standard motor speed designator (see chart). This is representative of the standard base speed of the motor for the selected bus voltage.

If the model number is created and the location for the motor speed designator is left blank, this is the base speed to which the motor will be manufactured. The model number can also be created including this standard speed designator.

Exlar also provides the flexibility to manufacture all of its "T-LAM" products with special base speeds to match your exact application requirements. This may be a higher than standard speed motor, or lower base speed than standard which will allow you to get the required torque at a speed optimized to your application and use the minimum amount of current from your amplifier.

The call-out for a special speed is configured in the model number by using a two digit code from 01-99. This code represents the number, in hundreds, of RPM that is the base speed for the particular motor.

For example, an SLG090-010-KCGS-AB1-138-40 motor that normally has a 4000 rpm standard winding can be changed to a 3300 rpm winding by changing the -40, to a -33. Similarly, it can be changed to a 5000 rpm winding by changing the -40 to a -50.

Changing this speed designator changes the ratings of the motor, these must be obtained from your local sales representative. Also, it is not possible to produce every possible speed from -01 to -99 for each motor at each voltage, so please contact your local sales representative for confirmation of the speed that is desired for the application.

Designator	Base Speed	Motor Series
-50	5000 rpm	SLM/SLG060
-40	4000 rpm	SLM/SLG075
-40	4000 rpm	SLM/SLG090
-30	3000 rpm	SLM/SLG115
-24	2400 rpm	SLM142, SLM180
01-99	Special Speed, consult your local sales representative	

Motor Stators

SLM/SLG motor options are described with a 3 digit code. The first digit calls out the stack length, the second digit signifies the rated bus voltage, and the third digit identifies the number of poles of the motor. Refer to the mechanical/electrical specifications for motor torque and actuator rated force.

8 Pole, Class 180 H

1 Stack		2 Stack		3 Stack	
118	115 Vrms	218	115 Vrms	318	115 Vrms
138	230 Vrms	238	230 Vrms	338	230 Vrms
158	400 Vrms	258	400 Vrms	358	400 Vrms
168	460 Vrms	268	460 Vrms	368	460 Vrms

Refer to specification pages 95-100 for availability of 115V stators by configuration.

* Low voltage stators may be limited to less than catalog rated torque and/or speed. Please contact your local sales representative when ordering this option.

Mechanical Options

HW = Manual Drive, Handwheel

This option provides a manual drive handwheel on the side of the motor. The handwheel has an engage/disengage lever that is tied to an interrupt switch. Not available on SLM/G060. Also not available with holding brake unless application details have been discussed with your local sales representative.

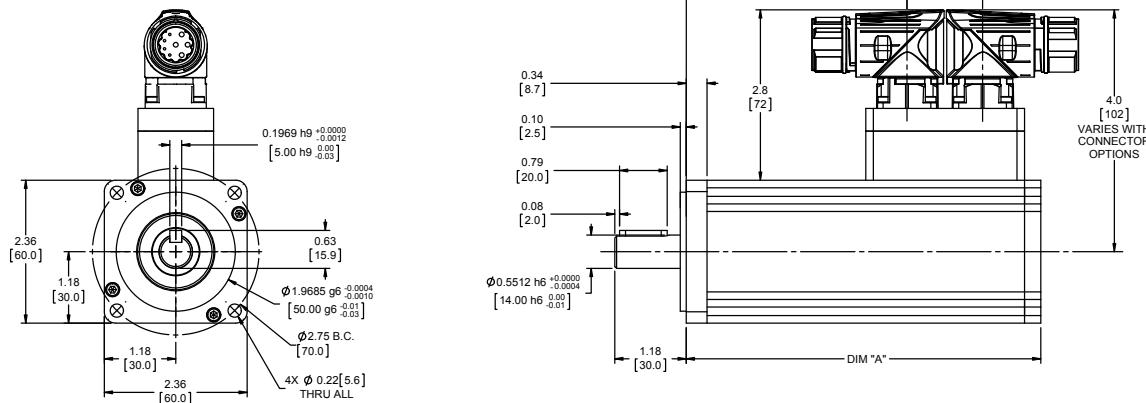

IP Ratings

Please see page 218 for full description of IP Ratings.

SLM Series Motors/SLG Series Gearmotors

Dimensions

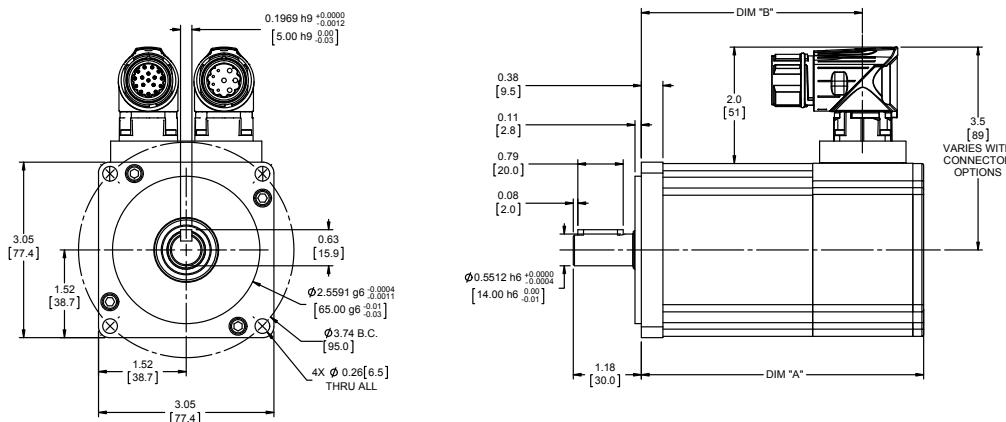

SLM060

DIM	1 Stack Motor in (mm)	2 Stack Motor in (mm)	3 Stack Motor in (mm)
A	4.61 (117.1)	5.86 (148.9)	7.11 (180.6)
B	2.40 (61.1)	3.65 (92.8)	4.90 (124.6)

Add 1.02 inches (25.9 mm) to Dimensions A and B if ordering a brake.
Face plate edge is not intended for alignment of shaft (use pilot)

SLM075

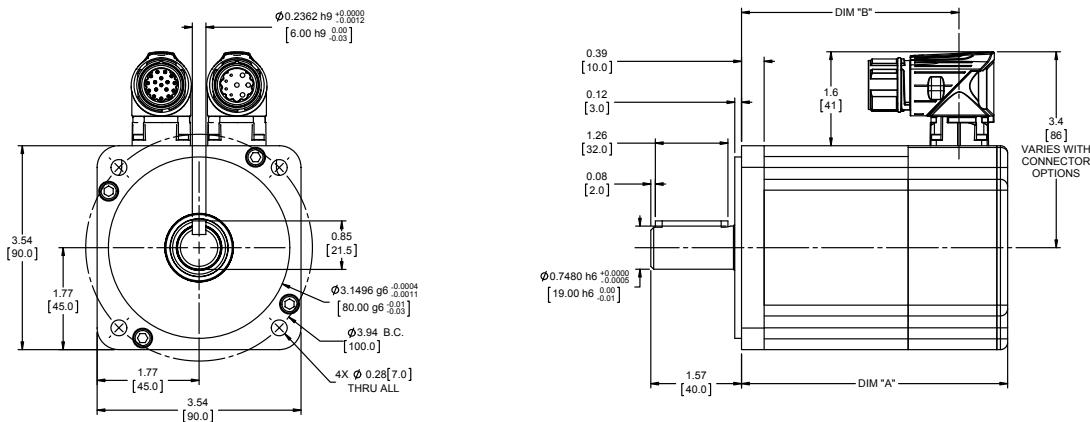

DIM	1 Stack Motor in (mm)	2 Stack Motor in (mm)	3 Stack Motor in (mm)
A	4.90 (124.5)	5.90 (149.9)	6.90 (175.3)
B	3.84 (97.6)	4.84 (123.0)	5.84 (148.4)

Add 1.28 inches (32.5 mm) to Dimensions A and B if ordering a brake.
Face plate edge is not intended for alignment of shaft (use pilot)
Electronics box extends past motor mount face.

Due to the size of many absolute encoders, the selection of such feedback results in a larger package size than is shown in drawings. Consult Exlar for details, or refer to the drawings provided after receipt of order.

SLM Series Motors/SLG Series Gearmotors

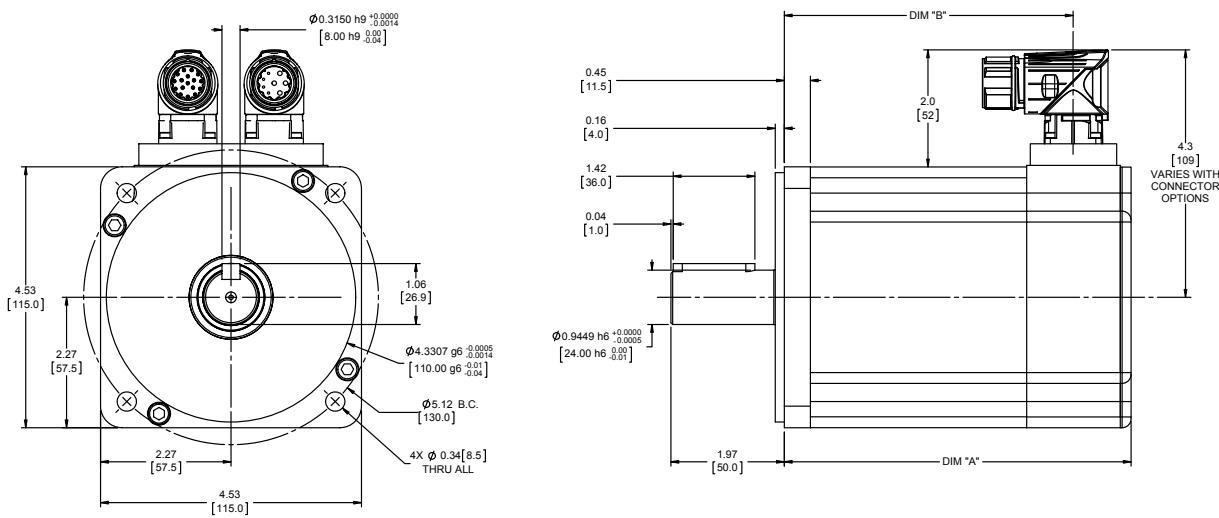

SLM090

DIM	1 Stack Motor in (mm)	2 Stack Motor in (mm)	3 Stack Motor in (mm)
A	4.65 (118.1)	5.65 (143.5)	6.65 (168.9)
B	3.81 (96.8)	4.76 (121.0)	5.81 (147.6)

Add 1.31 inches (33.3 mm) to Dimensions A and B if ordering a brake.
Face plate edge is not intended for alignment of shaft (use pilot)

SLM115

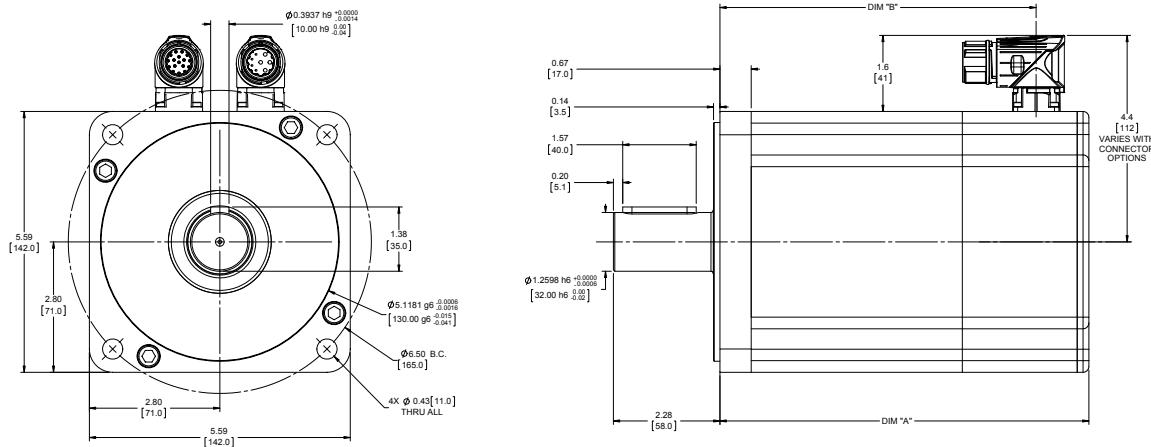

DIM	1 Stack Motor in (mm)	2 Stack Motor in (mm)	3 Stack Motor in (mm)
A	6.02 (152.9)	8.02 (203.7)	10.02 (254.5)
B	5.02 (127.5)	7.02 (178.3)	9.02 (229.1)

Add 1.73 inches (43.9 mm) to Dimensions A and B if ordering a brake.
Face plate edge is not intended for alignment of shaft (use pilot)

Due to the size of many absolute encoders, the selection of such feedback results in a larger package size than is shown in drawings. Consult Exlar for details, or refer to the drawings provided after receipt of order.

SLM Series Motors/SLG Series Gearmotors

SLM142

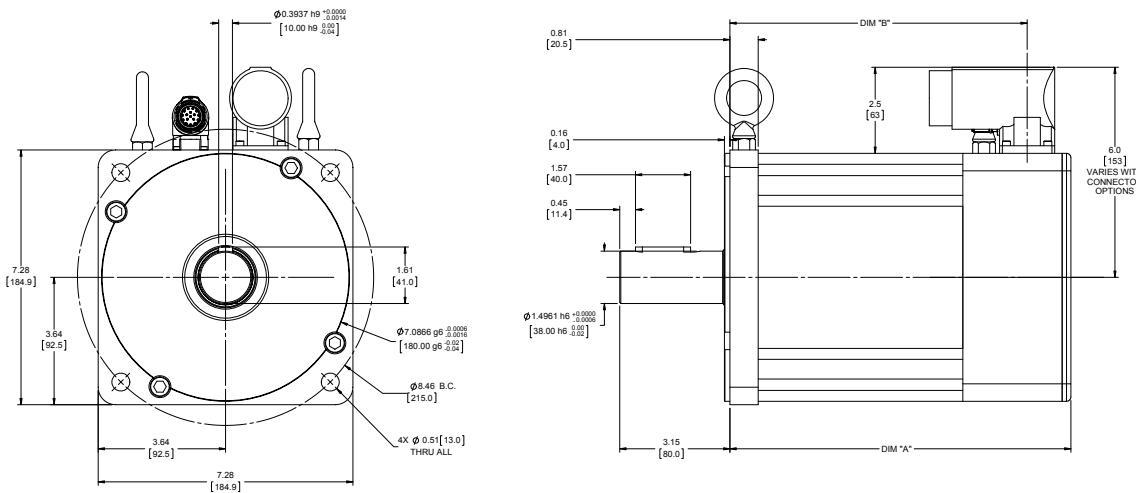

DIM	1 Stack Motor in (mm)	2 Stack Motor in (mm)	3 Stack Motor in (mm)
A	7.87 (199.9)	9.62 (244.3)	11.37 (288.8)
B	6.75 (171.3)	5.50 (139.6)	10.25 (260.2)

Add 1.66 inches (42.2 mm) to Dimensions A and B if ordering a brake.

Face plate edge is not intended for alignment of shaft (use pilot)

SLM180

DIM	1 Stack Motor in (mm)	2 Stack Motor in (mm)	3 Stack Motor in (mm)
A	9.74 (247.4)	12.24 (310.9)	14.74 (374.4)
B	8.49 (215.6)	10.99 (279.1)	13.49 (342.6)

Add 1.90 inches (48.3 mm) to Dimensions A and B if ordering a brake.

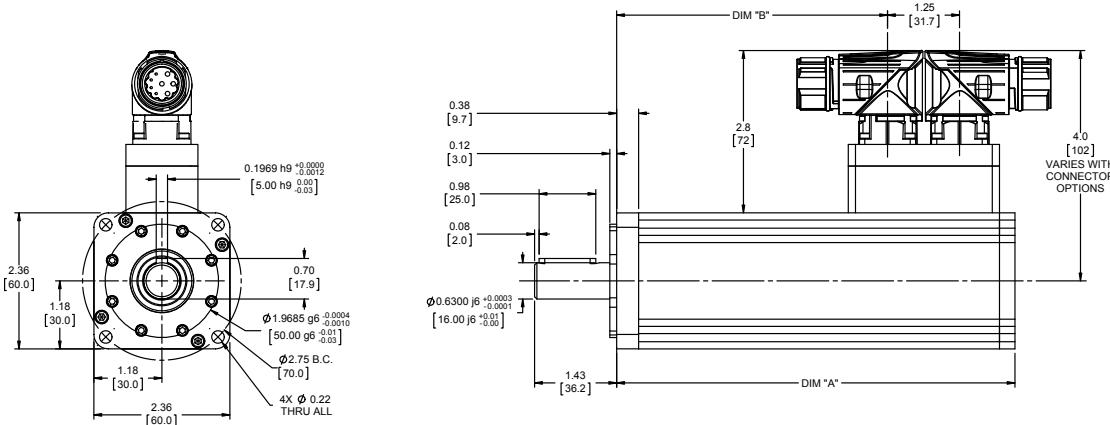

Face plate edge is not intended for alignment of shaft (use pilot)

Due to the size of many absolute encoders, the selection of such feedback results in a larger package size than is shown in drawings. Consult Exlar for details, or refer to the drawings provided after receipt of order.

Pre-sale drawings and models are representative and are subject to change. Certified drawings and models are available for a fee. Consult your local Exlar representative for details.

238 = 2 stack		268 = 2 stack	
338 = 3 stack		368 = 3 stack	

NOTES:

1. These housing options would typically be accompanied by the choice of the electroless nickel connectors if a connectorized unit were selected. Please inquire with your local sales representative.
2. Available as described in Feedback Types.
3. See page 170 for explanation of voltage, speed, stack and optimized stator options.
4. Not available on SLM/G060
5. For extended temperature operation consult factory for model number.

II = Optional Speed and Mechanical Designations

24 = 2400 rpm, SLM142 & 180

30 = 3000 rpm, SLM/G115

40 = 4000 rpm, SLM075, SLM/G090

50 = 5000 rpm, SLM/G060

MM = Mechanical Options⁵

HW = Manual drive, handwheel with Interlock switch⁴

For options or specials not listed above or for extended temperature operation, please contact Exlar

EL/ER SERIES

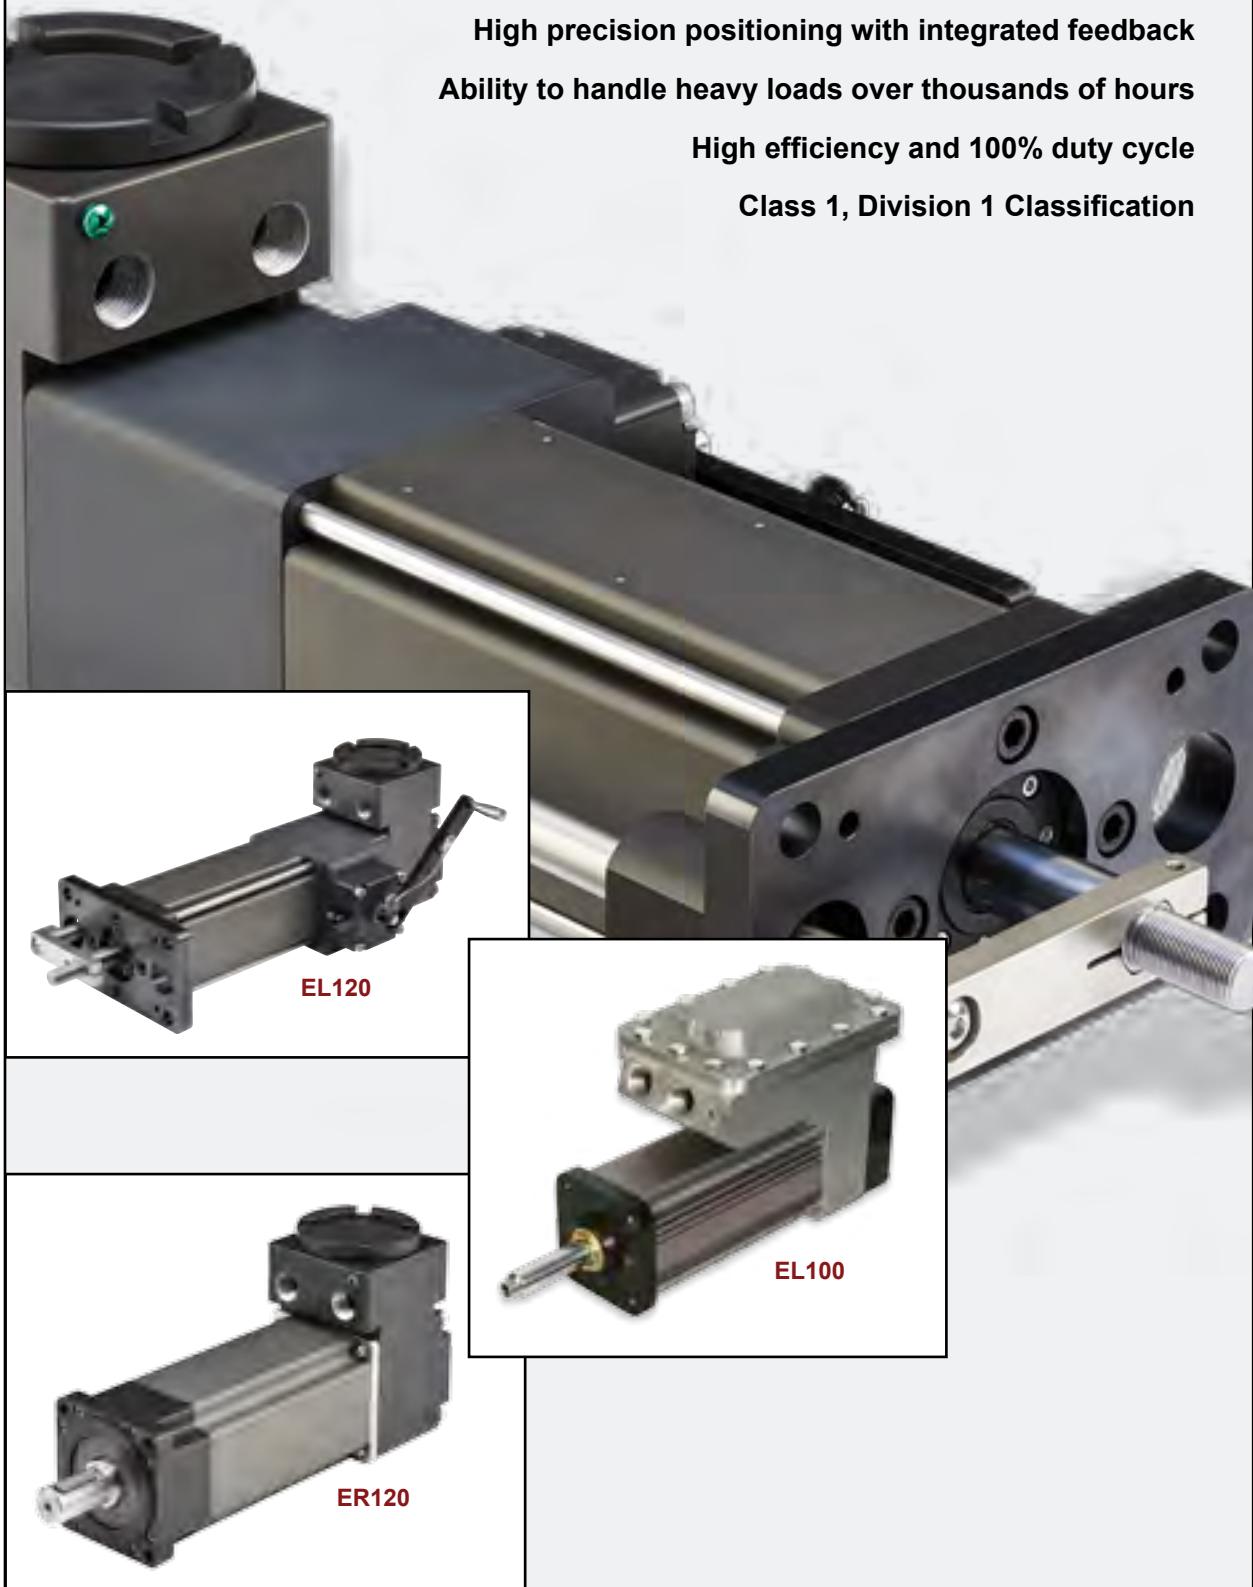

HAZARDOUS LOCATION ACTUATORS AND MOTORS

High precision positioning with integrated feedback

Ability to handle heavy loads over thousands of hours

High efficiency and 100% duty cycle

Class 1, Division 1 Classification

EL120 Explosion-Proof Actuators

[Return to table of contents](#)

EL120

ATEX Rated Explosion-Proof Linear Actuators

Perfect for valve control or other hazardous environment applications, the EL120 is a high performance electric actuator offered as a direct replacement for hydraulics. EL120 actuators feature longer life, linear speeds up to 37 inches per second, closed loop feedback, 90% efficiency and 100% duty cycle.

For gas turbines with variable guide vanes, EL120 actuators provide precise positioning and feedback for fine tuning injector airflow to effectively manage CO and NOx emissions. In Oil & Gas applications, the EL120 is well suited for position-based drilling choke valves.

0518

II 2G
Ex d IIB+H2 T4 Gb
SIRA 15ATEX1010X

163694
Class I Division 1
Groups B, C, D, T4

EL120 explosion-proof actuators meet ATEX requirements for use in potentially explosive atmospheres and are in conformity with the EU ATEX Directive 94/9/EC. Additionally, these actuators are rated for Class 1, Division 1, Groups B, C, D, and T4 hazardous environments.

The EL Series integrates a highly efficient planetary roller screw mechanism with a high torque servomotor in a single self-contained package. This highly robust design is engineered to provide reliable and precise operation over thousands of hours, handling heavy loads—even under very arduous conditions.

The EL120 Actuator is compatible with nearly any manufacturer's servo amplifier.

Material Handling

Printing presses

The EL Series of explosion proof actuators is ideal for valve control, as well as many other applications in hazardous environments. These all-electric actuators easily outperform hydraulics and other competing technologies offering long life, high speeds, closed loop feedback, 90% efficiency and 100% duty cycle.

*** Inertia +/-5%

¹ Back drive force is a nominal value only. Operating conditions can cause wide variations in back drive force. Exlar cannot assure that an actuator will or will not back drive.

DEFINITIONS:

Continuous Force: The linear force produced by the actuator at continuous motor torque.

Max Velocity: The linear velocity that the actuator will achieve at rated motor rpm.

Friction Torque (standard screw): Amount of torque required to move the actuator when not coupled to a load.

Friction Torque (preloaded screw): Amount of torque required to move the actuator when not coupled to a load.

Back Drive Force: Amount of axial force applied to the rod end of the actuator that will produce motion with no power applied to the actuator.

Min Stroke: Shortest available stroke length.

Max Stroke: Longest available stroke length.

C_a (Dynamic Load Rating): A design constant used when calculating the estimated travel life of the roller screw.

Inertia (zero stroke): Base inertia of an actuator with zero available stroke length.

Inertia Adder (per inch of stroke): Inertia per inch of stroke that must be added to the base (zero stroke) inertia to determine the total actuator inertia.

Weight (zero stroke): Base weight of an actuator with zero available stroke length.

Weight Adder (per inch of stroke): Weight adder per inch of stroke that must be added to the base (zero stroke) weight to determine the total actuator weight.

Speed vs. Force Curves

The speed vs. force curves (below) represent approximate continuous thrust ratings at the indicated linear speed. Different types of servo amplifiers offer varying motor torque

and, thus, varying actuator thrust. These values are at constant velocity and do not account for motor torque required for acceleration.

Estimated Service Life

The L_{10} expected life of a roller screw linear actuator is expressed as the linear travel distance that 90% of properly maintained roller screws are expected to meet or exceed. For higher than 90% reliability, multiply the result by the following factors: 95% x 0.62; 96% x 0.53; 97% x 0.44; 98% x 0.33; 99% x 0.21. This is not a guarantee; these charts should be used for estimation purposes only.

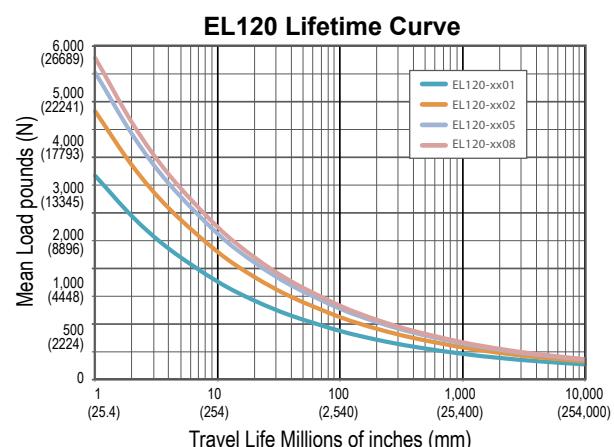

The underlying formula that defines this value is:

Travel life in millions of inches, where:

$$C_a = \text{Dynamic load rating (lbf)} \\ F_{cmi} = \text{Cubic mean applied load (lbf)} \\ \ell = \text{Roller screws lead (inches)}$$

$$L_{10} = \left(\frac{C_a}{F_{cmi}} \right)^3 \times \ell$$

All curves represent properly lubricated and maintained actuators. Ratings may vary, depending on the application.

2 = 2 stack motor

3 = 3 stack motor

I = Rated Voltage

1 = 115 Volt RMS

3 = 230 Volt RMS

5 = 400 Volt RMS

6 = 460 Volt RMS

J = Motor Poles

8 = 8 pole motor

KK = Rated Motor Speed at Rated Voltage

01 - 45 Two digit number x 100 = rated RPM

MM = Mechanical Option³

PF = Preloaded follower¹

AR = External anti-rotate assembly

RB = Rear brake

HW = Manual drive, handwheel with interlock switch

CD = Crank drive with interlock switch

NOTES:

1. The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the standard non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the same size and lead of a non-preloaded screw.

2. Not compatible with Kinetix 300 Drives.

3. For extended temperature operation consult factory for model number.

For options or specials not listed above or for extended temperature operation, please contact Exlar

EL100

Explosion-Proof Linear Actuators

This electromechanical system provides process engineers with a clean, fast, simple, and cost effective replacement for hydraulic actuation and a longer life alternative to pneumatic actuation. The roller screw technology manufactured by Exlar offer 15 times the travel life of rival ball screws and can carry higher loads. The compact design allows users to effectively replace hydraulic or air cylinders with an electromechanical actuator, while meeting all required capabilities of the application. Servo electric actuation reduces emissions, lowers energy consumption (80% system energy efficiency), and increases position control and accuracy—all leading to reduced cost.

The EL100 explosion-proof linear actuator offers a Class 1, Division 1, Groups B, C, D, and T3 rating. Additionally, it meets ATEX essential requirements and are in conformance with the EU ATEX Directive 94/9/EC.

The EL Series linear actuators are compatible with nearly any manufacturer's resolver-based amplifier.

II 2 G
Ex d IIB+H2 T3 Gb
IECEx SIR 13.0139X

163694
Class I Division 1
Groups B, C, D, T3C

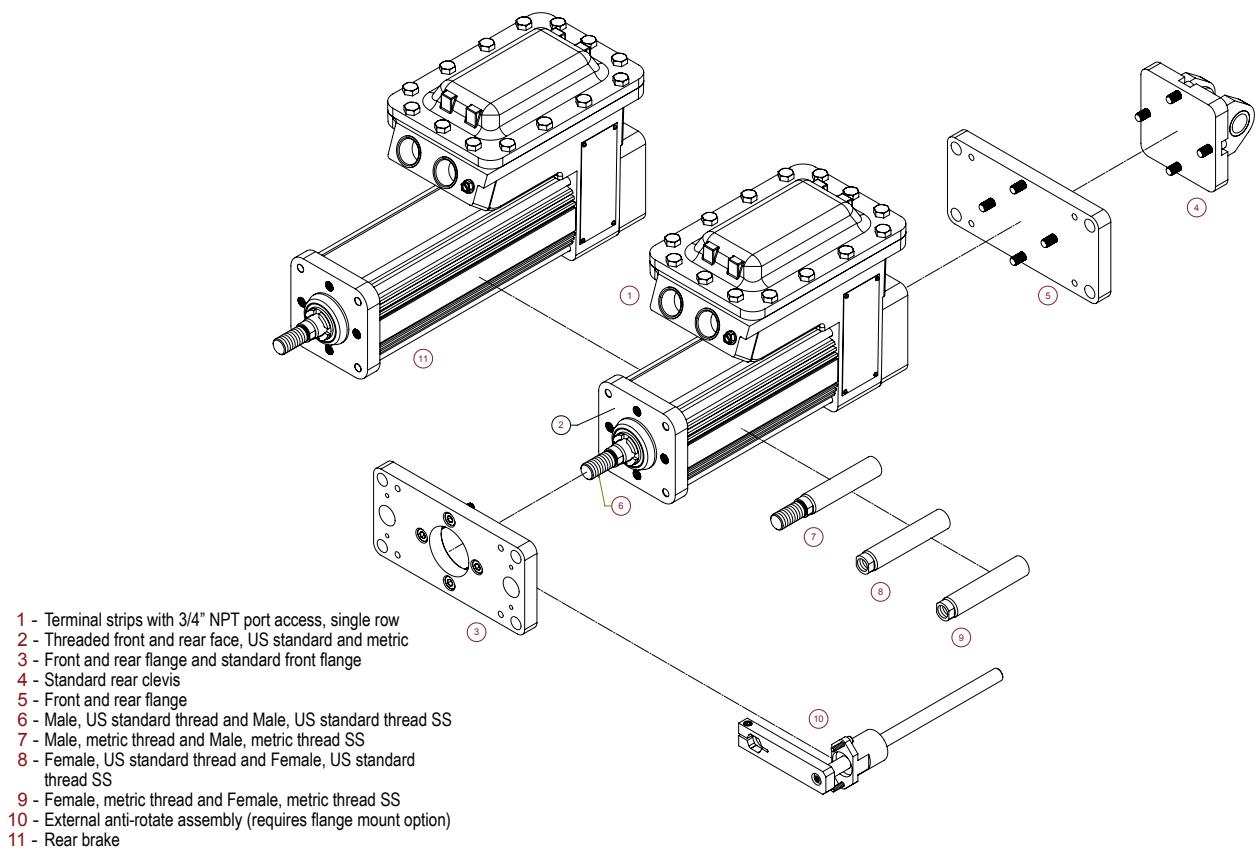

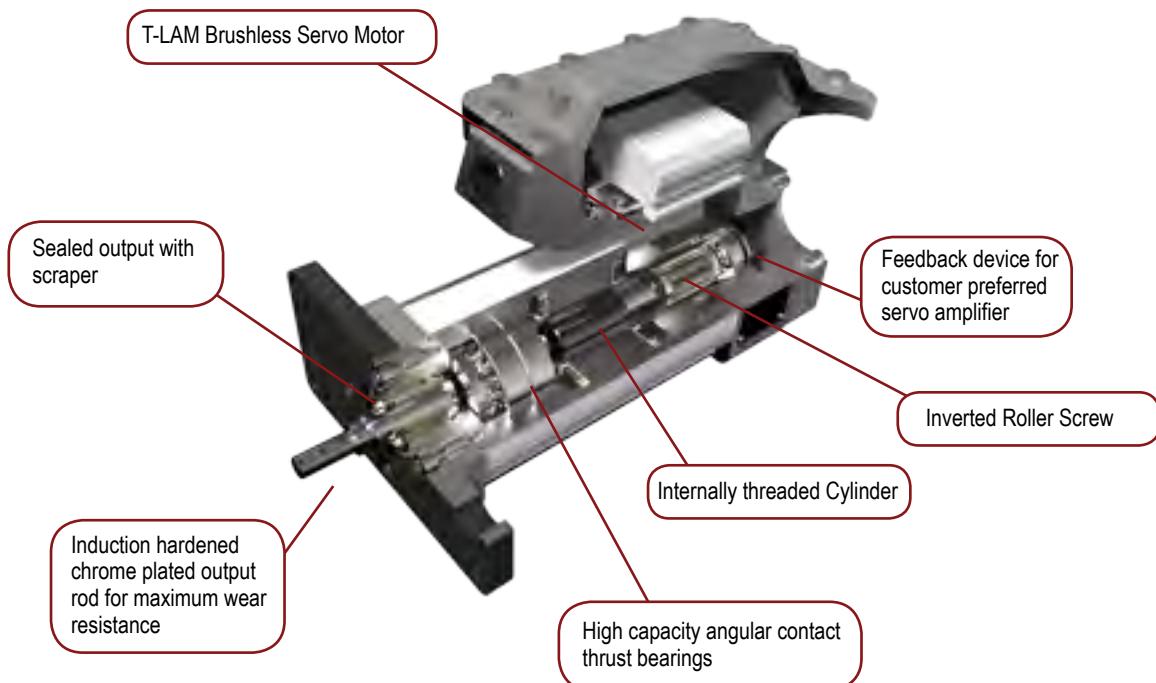

Features
T-LAM technology yielding 35% increase in continuous motor torque over traditional windings
Forces up to 2000 lbs
Speeds up to 25 ips
Resolver feedback
Strokes up to 6 inches
8 pole motors
Rod end options
Several mounting configurations
Potted NPT connectors
Windings available from 24 VDC to 460 VAC rms
Class 180H insulation, IP66S Standard

* "Class I" means that flammable gases or vapors may be present in the air in quantities sufficient to produce explosive or ignitable mixtures. "Division 1" means that hazardous concentrations in the air may exist continuously, intermittently, or periodically under normal operating conditions. "Group B" allows for atmospheres containing hydrogen, gases, or vapors of equivalent hazard, such as manufactured gas. "Group C" allows for atmospheres containing ethyl-ether vapors, ethylene or cyclo propane. "Group D" allows for atmospheres containing gasoline, hexane, naphtha, benzene, butane, alcohol, acetone, benzol, lacquer solvent vapors or natural gas. EL Series actuators are not rated for operation in atmospheres containing acetylene. Temperature classification defines the maximum surface temperature the product will reach at full load. T3 = 200° C, T3A = 180° C, T4 = 135° C.

CSA/ATEX Temperature Class	T3, 200° C Maximum Allowable Surface Temperature							

For amplifiers using peak sinusoidal ratings, multiply RMS sinusoidal Kt by 0.707, and peak current by 1.414.
Test data derived using NEMA recommended aluminum heatsink 12" x 12" x 1/2" at 25° / 80°C ambient.

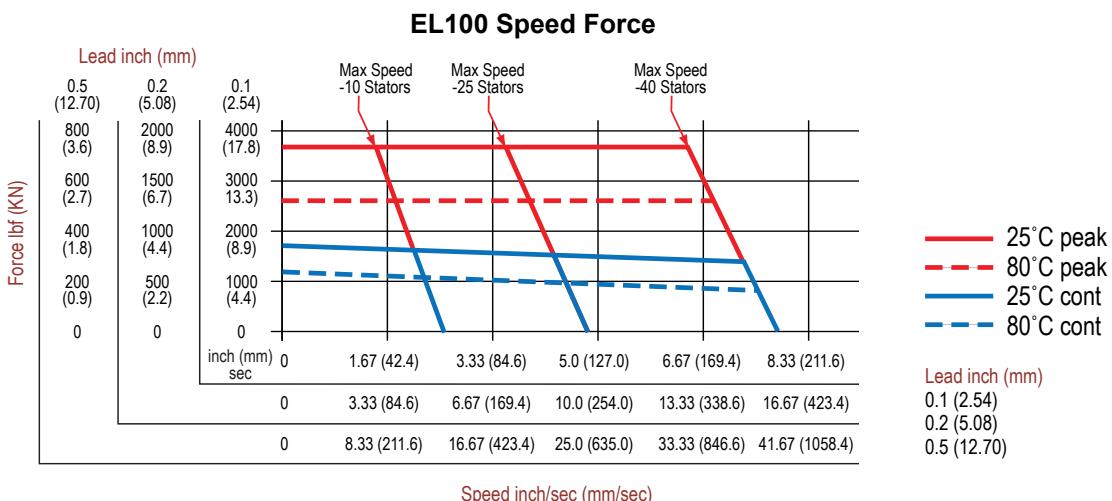

Specifications subject to change without notice.

EL100 Explosion-Proof Linear Actuators

Performance Curves

The below speed vs. force curves represent approximate continuous thrust ratings at indicated linear speed. Different types of servo amplifiers offer varying motor torque and, thus,

varying actuator thrust. These values are at constant velocity and do not account for motor torque required for acceleration.

DEFINITIONS:

Continuous Force: The linear force produced by the actuator at continuous motor torque.

Max Stroke: Longest available stroke length.

Max Velocity: The linear velocity that the actuator will achieve at rated motor rpm.

C_a (Dynamic Load Rating): A design constant used when calculating the estimated travel life of the roller screw.

Friction Torque (standard screw): Amount of torque required to move the actuator when not coupled to a load.

Inertia (zero stroke): Base inertia of an actuator with zero available stroke length.

Friction Torque (preloaded screw): Amount of torque required to move the actuator when not coupled to a load.

Inertia Adder (per inch of stroke): Inertia per inch of stroke that must be added to the base (zero stroke) inertia to determine the total actuator inertia.

Back Drive Force: Amount of axial force applied to the rod end of the actuator that will produce motion with no power applied to the actuator.

Weight (zero stroke): Base weight of an actuator with zero available stroke length.

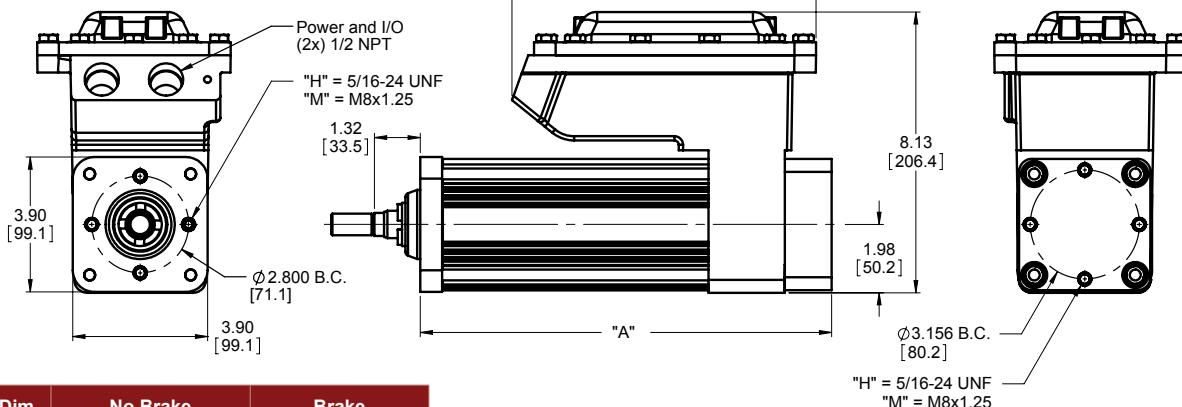

Min Stroke: Shortest available stroke length.

Weight Adder (per inch of stroke): Weight adder inch unit of stroke that must be added to the base (zero stroke) weight to determine the total actuator weight.

EL100 Explosion-Proof Linear Actuators

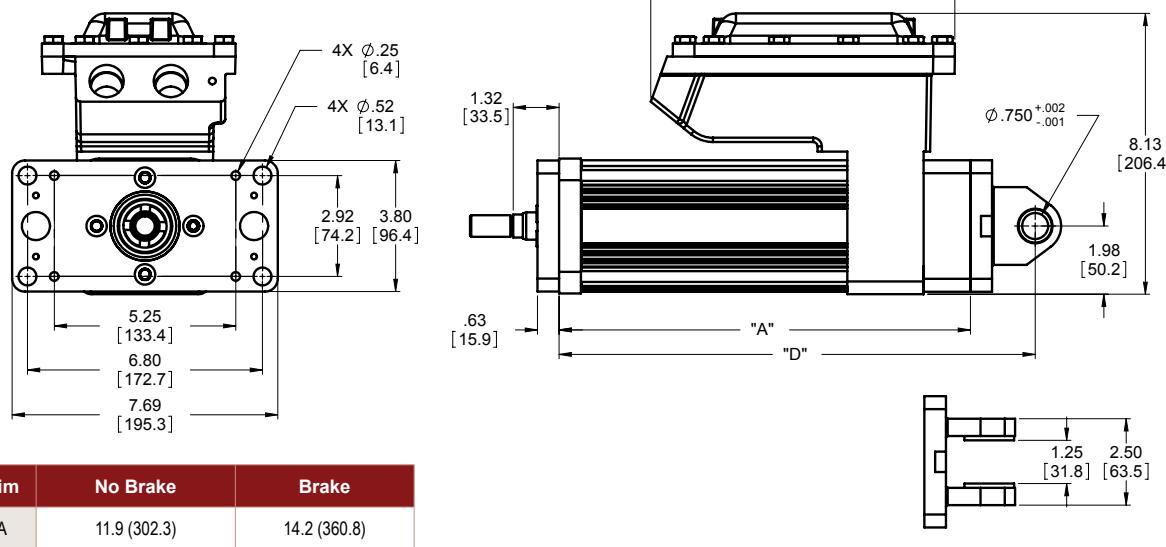

Dimensions

Base Actuator

Dim	No Brake	Brake

ER120 Series

Explosion-Proof Rotary Motor and Gearmotor

For hazardous duty environments with constant exposure to flammable gasses or vapors* Exlar's ER Series rotary explosion-proof motors and gearmotors provide an excellent solution. Exlar's motors utilizing T-LAM technology, an innovative segmented winding, have been designed for efficiency, power and durability and provide a very high torque-to-size ratio when compared to other suppliers' motors.

The gearmotor comprises a brushless permanent magnet motor optimized for use with an integral planetary gear set. Through the uniform load sharing of several gears acting in concert, planetary gear heads are a very compact, reliable solution providing high torque, low backlash and low maintenance.

The ER Series motors are compatible with nearly any manufacturers' resolver-based amplifier.

The ER Series actuators are ideal for operating quarter turn or multi turn valves or shaft driven dampers in hazardous environments. These actuators are directly coupled shaft-to-shaft, eliminating ungainly mechanisms needed by the linear motion of pneumatics. Our compact T-LAM servo motors outperform any standard motor, providing excellent continuous modulating service.

* ER Series motors are rated for Class I, Division 1, Groups B, C and D. "Class I" means that flammable gasses or vapors may be present in the air in quantities sufficient to produce explosive or ignitable mixtures. "Division 1" means that hazardous concentrations in the air may exist continuously, intermittently, or periodically under normal operating conditions. "Group B" allows for atmospheres containing hydrogen, or gasses (or vapors) of equivalent hazard, such as manufactured gas. "Group C" allows for atmospheres containing ethyl-ether vapors, ethylene or cyclo propane. "Group D" allows for atmospheres containing gasoline, hexane, naphtha, benzene, butane, alcohol, acetone, benzol, lacquer solvent vapors or natural gas. ER Series motors are not rated for operation in atmospheres containing acetylene.

ER120 Explosion-Proof Motors

Industries and Applications

Process Control

- Valve control
- Damper control
- Turbine control
- Choke valves
- Fuel control
- Plunger pumps

Automotive

- Paint booths
- Fuel control
- Engine test stands

Defense

- Weapons room

Material Handling

- Printing presses

In hazardous duty environments where exposure to flammable gasses or vapors may be ever present, ER Series explosion proof motors and gear motors stand up to the challenge making them perfect for paint booths and printing presses.

With life counts in the hundreds of millions of cycles, response times in milliseconds and accuracy of 0.10%, Exlar offers superior electric control valve actuation replacing other traditional electric, pneumatic, and hydraulic actuators.

Gearmotor General Performance Specifications

Two torque ratings for the ER Series Gearmotors are given in the table below. The left hand columns give the maximum (peak) allowable output torque for the indicated ratios of each size ER Series Gearmotor. This IS NOT the rated output torque of the motor multiplied by the ratio of the reducer.

It is possible to select a configuration of the motor selection and gear ratio such that the rated motor torque, multiplied by the gear ratio exceeds these ratings. It is the responsibility of the user to ensure that the settings of the system, including the amplifier, do not allow these values to be exceeded.

The right hand columns give the output torque at the indicated speed which will result in 10,000 hour (L10). The setup of the system, including the amplifier, will determine the actual output torque and speed.

Output Torque Ratings – Mechanical

ER120 Ratio	Maximum Allowable Output Torque lbf-in (Nm)	Output Torque @ Speed for 10,000 Hour Life – lbf-in (Nm)		
		1000 RPM	2000 RPM	3000 RPM
4:1	4696 (530.4)	1392 (157.3)	1132 (127.9)	1000 (112.9)

Motor Mount Drawing

Feedback Types for GSX, GSM, SLG, SLM, EL, and ER

Commonly Ordered Options Shown in **BOLD**

(Also specify the Amplifier/Drive Model being used when ordering)

- Standard Incremental Encoder – 2048 line
(8192 cts) per rev. index pulse, Hall commutation, 5VDC
- Standard Resolver – Size 15, 1024 line
(2048 cts) per rev. two pole resolver
- Motor files for use with select Emerson/CT, Rockwell /AB and Danaher/Kollmorgen Drives are available at www.exlar.com

Allen-Bradley/Rockwell: (Note: AB8, AB9 and ABB callouts are available only on spare/replacement actuators that have been previously ordered. For all new configurations using a Rockwell drive, please select from the options below. Consult Exlar for integration questions)³

Note: RA1, RA2, RA3, and RA4 callouts not available for SLM motors.

RA1 = Hiperface Stegmann SKM36 multi-turn absolute encoder. MPL Type V feedback (128 sin/cos) and Type 7 SpeedTec connectors and wiring when using the "M" connector option. 20 and 30 frame sizes only. (Formerly ABB)^{1,4}

RA2 = Hiperface Stegmann SRM50 multi-turn absolute encoder. MPL Type M feedback (1024 sin/cos) and Type 7 SpeedTec connectors and wiring when using the "M" connector option. 40, 50 and 60 frame sizes only. (Formerly AB9)^{1,4}

RA3 = Standard incremental encoder. MPL Type M feedback (2048 line) and Type 7 SpeedTec connector and wiring when using the "M" connector option. (Formerly AB8)⁴

RA4 = Standard Resolver. MPL Type R feedback (4 pole) and Type 7 SpeedTec connectors and wiring when using the "M" connector option. (Formerly AB6)⁴

Advanced Motion Control:

- AM1 = Standard Incremental Encoder
- AM2 = Encoder 1000 line, w/commutation, 5 VDC
- AM3 = Standard Resolver
- AM5 = Encoder 5000 line, w/commutation, 5 VDC

Baldor:

- BD2 = Std Resolver – BSM motor wiring w/M23 connectors for 'M' option
- BD3 = Std Incremental Encoder – BSM motor wiring w/M23 connectors for 'M' option

Beckhoff:

- BE2 = EnDat Heidenhain EQN1125 multi-turn absolute encoder – AM5XX motor wiring w/M23 euro connectors for 'M' option

B&R Automation:

- BR1 = Standard Resolver
- BR2 = EnDat Heidenhain EQN1125/1325 multi-turn absolute encoder – 8LS/8LM motor wiring w/M23 euro connectors for 'M' option

Copley Controls:

- CO1 = Standard Incremental Encoder
- CO2 = Standard Resolver

Control Techniques/Emerson:

- CT1 = Hiperface Stegmann SRM050 multi-turn absolute encoder – 40-50-60 Frame Size. FM/UM/EZ motor wiring w/M23 euro connectors for 'M' option

- CT3 = Hiperface Stegmann SKM036 multi-turn absolute encoder – 20-30 Frame Size. FM/UM/EZ motor wiring w/M23 euro connectors for 'M' option

- CT4 = Standard Incremental Encoder – FM/UM/EZ motor wiring w/M23 euro connectors for 'M' option

- CT5 = Std Resolver – FM/UM/EZ motor wiring w/M23 euro connectors for 'M' option

- CT7 = Encoder 5000 line, with commutation, 5 VDC – FM/UM/EZ motor wiring w/M23 euro connectors for 'M' option

- CT9 = Unidrive SP with EnDat Heidenhain EQN1125 multi-turn absolute encoder w/M23 connectors

Continued on next page

Engineering Reference

Commonly Ordered Options Shown in **BOLD**

Elmo Motion Control:

EL1 = Standard Resolver
EL2 = Standard Incremental Encoder
EL3 = EnDat Heidenhain EQN1125 multi-turn absolute encoder

Emerson/Control Techniques:

EM2 = Std Incremental Encoder – NT motor wiring w/MS connectors for 'M' option
EM5 = Encoder 5000 line, with commutation, 5 VDC – NT motor wiring w/MS connectors for 'M' option

Elau:

EU1 = Hiperface Stegmann SRM050 multi-turn absolute encoder – 40-50-60 Frame Size. SH motor wiring w/MS connectors for 'M' option
EU4 = Hiperface Stegmann SKM036 multi-turn absolute encoder – 20-30 Frame Size. SH motor wiring w/MS connectors for 'M' option.

Exlar:

EX4 = Standard Resolver
EX5 = Standard Resolver with KTY84 thermistor
EX6 = EnDat Heidenhain EQN1125 multi-turn absolute encoder
EX7 = Incremental encoder, 5000 line with commutation, 5Vdc
EX8 = Hiperface Stegmann SRM50 multi-turn absolute encoder

Indramat/Bosch-Rexroth:

IN6 = Std Resolver – MKD/MHD motor wiring w/M23 euro connectors for 'M' option
IN7 = Hiperface Stegmann SKM036 multi-turn absolute encoder – MSK motor wiring w/M23 euro connectors for 'M' option – plug & play option
IN8 = Indradrive EnDat Heidenhain EQN1125 multi-turn absolute w/M23 connectors

Kollmorgen/Danaher:

KM4 = EnDat Heidenhain EQN1325 multi-turn absolute encoder (Sine Encoder)– AKM motor wiring w/M23 Intercontec euro connectors for 'M' option
KM5 = Standard Resolver – AKM motor wiring w/M23 Intercontec euro connectors for 'M' option
KM6 = Standard Incremental Encoder – AKM motor wiring w/ M23 Intercontec euro connectors for 'M' option

Lenze/AC Tech:

LZ1 = Hiperface Stegmann SRM050 multi-turn absolute encoder – MCS motor wiring w/M23 euro connectors for 'M' option
LZ5 = Standard Resolver – MCS motor wiring w/ M23 euro connectors for 'M' option
LZ6 = Standard Incremental Encoder – MCS motor wiring w/ M23 euro connectors for 'M' option

Mitsubishi^{2, 4}:

MT2 = DSL Stegmann MR-J4 compatible

Parker Compumotor:

PC6 = Std Incremental Encoder – SMH motor wiring w/M23 connectors for 'M' option – European only
PC7 = Std Resolver – SMH motor wiring w/M23 connectors for 'M' option – European only
PC8 = Standard Incremental Encoder – MPP series motor wiring w/PS connectors for 'M' option – US Only
PC9 = Hiperface Stegmann SRM050 multi-turn absolute encoder – MPP motor wiring w/PS connectors for 'M' option – US Only
PC0 = Standard Resolver – MPP motor wiring w/PS connectors for 'M' option – US Only

Schneider Electric:

SC2 = Hiperface Stegmann SKM036 multi-turn absolute encoder – BSH motor wiring w/M23 euro connectors for 'M' option

Stober Drives:

SB3 = EnDat Heidenhain EQN1125 multi-turn absolute encoder – ED/EK motor wiring w/M23 euro connectors for 'M' option
SB4 = Standard Resolver ED/EK motor wiring W/23 connector for "M" option

Siemens:

SM2 = Standard Resolver – 1FK7 motor wiring w/M23 connectors for 'M' option
SM3 = EnDat Heidenhain EQN1325 multi-turn absolute encoder – 40-50-60 Frame Size. 1FK7 motor wiring w/M23 euro connectors for 'M' option
SM4 = EnDat Heidenhain EQN1125 multi-turn absolute encoder – 20-30 Frame Size. 1FK7 motor wiring w/M23 euro connectors for 'M' option
SM9 = Siemens Heidenhain EQN1325 4096 (12 bits) multi-turn absolute w/M23 connectors

SEW/Eurodrive:

SW1 = Standard Resolver – CM motor wiring w/ M23 euro connectors for 'M' option
SW2 = Standard Incremental Encoder
SW3 = Hiperface Stegmann SRM050 multi-turn absolute encoder – CM motor wiring w/ M23 euro connectors for 'M' option

Yaskawa:

YS5 = Yaskawa Sigma V absolute encoder⁴

NOTES:

1. Not compatible with Kinetix 300 Drives.
2. N/A with holding brake unless application details are discussed with your local sales representative.
3. All rotary motors to be used with Kinetix or Sercos based systems will require prior approval from Rockwell Automation.
4. Not available with rotary motors

Sizing and Selection of Exlar Linear and Rotary Actuators

Move Profiles

The first step in analyzing a motion control application and selecting an actuator is to determine the required move profile. This move profile is based on the distance to be traveled and the amount of time available in which to make that move. The calculations below can help you determine your move profile.

Each motion device will have a maximum speed that it can achieve for each specific load capacity. This maximum speed will determine which type of motion profile can be used to complete the move. Two common types of move profiles are trapezoidal and triangular. If the average velocity of the profile, is less than half the maximum velocity of the actuator, then triangular profiles can be used. Triangular Profiles result in the lowest possible acceleration and deceleration. Otherwise a trapezoidal profile can be used. The trapezoidal profile below with 3 equal divisions will result in 25% lower maximum speed and 12.5% higher acceleration and deceleration. This is commonly called a 1/3 trapezoidal profile.

The following pages give the required formulas that allow you to select the proper Exlar linear or rotary actuator for your application. The first calculation explanation is for determining the required thrust in a linear application.

The second provides the necessary equations for determining the torque required from a linear or rotary application. For rotary applications this includes the use of reductions through belts or gears, and for linear applications, through screws.

Pages are included to allow you to enter your data and easily perform the required calculations. You can also describe your application graphically and fax it to Exlar for sizing. Reference tables for common unit conversions and motion system constants are included at the end of the section.

Linear Move Profile Calculations

$$V_{max} = \text{max.velocity-in/sec (m/sec)}$$

$$V_{avg} = \text{avg. velocity-in/sec (m/sec)}$$

$$t_{acc} = \text{acceleration time (sec)}$$

$$t_{dec} = \text{deceleration time (sec)}$$

$$t_{cv} = \text{constant velocity (sec)}$$

$$t_{total} = \text{total move time (sec)}$$

$$acc = \text{accel-in/sec}^2 (\text{m/sec}^2)$$

$$dec = \text{decel-in/sec}^2 (\text{m/sec}^2)$$

$$cv = \text{constant vel.-in/sec (m/sec)}$$

$$\mathbf{D} = \text{total move distance-in (m)} \\ \text{or revolutions (rotary)}$$

Standard Equations

$$V_{avg} = D / t_{total}$$

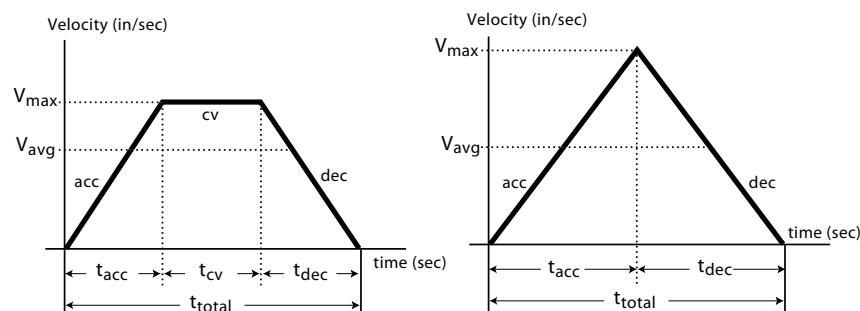

$$\text{If } t_{acc} = t_{dec} \text{ Then: } V_{max} = \\ (t_{total}/(t_{total}-t_{acc}))(V_{avg})$$

and

$$\mathbf{D = Area under profile curve}$$

$$D = (1/2)(t_{acc}+t_{dec})+t_{cv})(V_{max})$$

Trapezoidal Move Profile Triangular Move Profile

Trapezoidal Equations

$$\text{If } t_{acc} = t_{cv} = t_{dec} \text{ Then:}$$

$$V_{max} = 1.5 (V_{avg})$$

$$D = (2/3) (t_{total}) (V_{max})$$

$$acc = dec = \frac{V_{max}}{t_{acc}}$$

Triangular Equations

$$\text{If } t_{acc} = t_{total}/2 \text{ Then:}$$

$$V_{max} = 2.0 (V_{avg})$$

$$D = (1/2) (t_{total}) (V_{max})$$

$$acc = dec = \frac{V_{max}}{t_{acc}}$$

Sizing and Selection of Exlar Linear Actuators

Terms and (units)

THRUST = Total linear force-lbf (N)
 θ = Angle of inclination (deg)
F_{friction} = Force from friction-lbf (N)
t_{acc} = Acceleration time (sec)
F_{acc} = Acceleration force-lbf (N)
v = Change in velocity-in/sec (m/s)
F_{gravity} = Force due to gravity-lbf (N)
 μ = Coefficient of sliding friction
F_{applied} = Applied forces-lbf (N)
(refer to table on page 136 for different materials)
WL = Weight of Load-lbf (N)
g = 386.4: Acceleration of gravity - in/sec² (9.8 m/sec²)

Thrust Calculation Equations

$$\text{THRUST} = \text{F}_{\text{friction}} + [\text{F}_{\text{acceleration}}] + \text{F}_{\text{gravity}} + \text{F}_{\text{applied}}$$

$$\text{THRUST} = \text{WL}\mu\cos\theta + [(\text{WL}/386.4)(\text{v}/\text{tacc})] + \text{WL}\sin\theta + \text{F}_{\text{applied}}$$

Sample Calculations: Calculate the thrust required to accelerate a 200 pound mass to 8 inches per second in an acceleration time of 0.2 seconds. Calculate this thrust at inclination angles(θ) of 0°, 90° and 30°. Assume that there is a 25 pound spring force that is applied against the acceleration.

$$\text{WL} = 200 \text{ lbf}, \text{v} = 8.0 \text{ in/sec.}, \text{ta} = 0.2 \text{ sec.}, \text{Fapp.} = 25 \text{ lbf}, \mu = 0.15$$

$$\theta = 0^\circ$$

$$\begin{aligned} \text{THRUST} &= \text{WL}\mu\cos\theta + [(\text{WL}/386.4)(\text{v}/\text{tacc})] + \text{WL}\sin\theta + \text{F}_{\text{applied}} \\ &= (200)(0.15)(1) + [(200/386.4)(8.0/0.2)] + (200)(0) + 25 \\ &= 30 \text{ lbs} + 20.73 \text{ lbs} + 0 \text{ lbs} + 25 \text{ lbs} = \mathbf{75.73 \text{ lbs force}} \end{aligned}$$

$$\theta = 90^\circ$$

$$\begin{aligned} \text{THRUST} &= \text{WL}\mu\cos\theta + [(\text{WL}/386.4)(\text{v}/\text{tacc})] + \text{WL}\sin\theta + \text{F}_{\text{applied}} \\ &= (200)(0.15)(0) + [(200/386.4)(8.0/0.2)] + (200)(1) + 25 \\ &= 0 \text{ lbs} + 20.73 \text{ lbs} + 200 \text{ lbs} + 25 \text{ lbs} = \mathbf{245.73 \text{ lbs force}} \end{aligned}$$

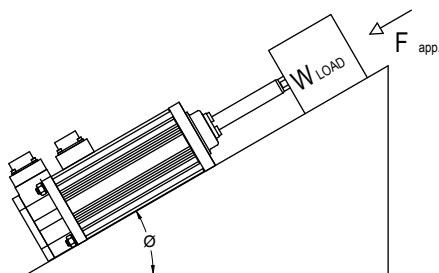

$$\theta = 30^\circ$$

$$\begin{aligned} \text{THRUST} &= \text{WL}\mu\cos\theta + [(\text{WL}/386.4)(\text{v}/\text{tacc})] + \text{WL}\sin\theta + \text{F}_{\text{applied}} \\ &= (200)(0.15)(0.866) + [(200/386.4)(8.0/0.2)] + (200)(0.5) + 25 \\ &= 26 \text{ lbs} + 20.73 \text{ lbs} + 100 + 25 = \mathbf{171.73 \text{ lbs force}} \end{aligned}$$

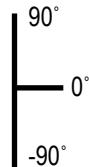

Thrust Calculations

Definition of thrust:

The thrust necessary to perform a specific move profile is equal to the sum of four components of force. These are the force due to acceleration of the mass, gravity, friction and applied forces such as cutting and pressing forces and overcoming spring forces.

Angle of Inclination

Note: at $\theta = 0^\circ$
 $\cos\theta = 1; \sin\theta = 0$
at $\theta = 90^\circ$
 $\cos\theta = 0; \sin\theta = 1$

It is necessary to calculate the required thrust for an application during each portion of the move profile, and determine the worst case criteria. The linear actuator should then be selected based on those values. The calculations at the right show calculations during acceleration which is often the most demanding segment of a profile.

Motor Torque Calculations

When selecting an actuator system it is necessary to determine the required motor torque to perform the given application. These calculations can then be compared to the torque ratings of the given amplifier and motor combination that will be used to control the actuator's velocity and position.

When the system uses a separate motor and screw, like the FT actuator, the ratings for that motor and amplifier are consulted. In the case of the GSX Series actuators with their integral brushless motors, the required torque divided by the torque constant of the motor (K_t) must be less than the current rating of the GSX or SLM motor.

Inertia values and torque ratings can be found in the GSX, FT, and SLM/SLG Series product specifications.

For the GSX Series the screw and motor inertia are combined.

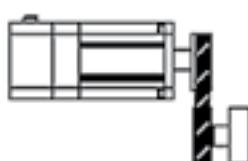

Motor with screw (GSX, GSM, FT, & EL)

Motor & motor with reducer (SLM/SLG & ER)

Motor with belt and pulley

Terms and (units)

λ	= Required motor torque, lbf-in (N-m)
λ_a	= Required motor acceleration torque, lbf-in (N-m)
F	= Applied force load, non inertial, lbf (kN)
S	= Screw lead, in (mm)
R	= Belt or reducer ratio
T_L	= Torque at driven load lbf-in (N-m)
v_L	= Linear velocity of load in/sec (m/sec)
ω_L	= Angular velocity of load rad/sec
ω_m	= Angular velocity of motor rad/sec
η	= Screw or ratio efficiency
g	= Gravitational constant, 386.4 in/s ² (9.75 m/s ²)
α	= Angular acceleration of motor, rad/s ²
m	= Mass of the applied load, lb (N)
J_L	= Reflected Inertia due to load, lbf-in-s ² (N-m-s ²)
J_r	= Reflected Inertia due to ratio, lbf-in-s ² (N-m-s ²)
J_s	= Reflected Inertia due to external screw, lbf-in-s ² (N-m-s ²)
J_m	= Motor armature inertia, lbf-in-s ² (N-m-s ²)
L	= Length of screw, in (m)
ρ	= Density of screw material, lb/in ³ (kg/m ³)
r	= Radius of screw, in (m)
π	= pi (3.14159)
C	= Dynamic load rating, lbf (N)

Velocity Equations

Screw drive: $V_L = \omega_m * S / 2\pi$ in/sec (m/sec)

Belt or gear drive: $\omega_m = \omega_L * R$ rad/sec

Torque Equations

Torque Under Load

Screw drive (GS, FT or separate screw): $\lambda = \frac{S * F}{2 * \pi * \eta}$ lbf-in (N-m)

Belt and Pulley drive: $\lambda = T_L / R \eta$ lbf-in (N-m)

Gear or gear reducer drive: $\lambda = T_L / R \eta$ lbf - in (N-m)

Torque Under Acceleration

$\lambda a = (J_m + J_r + (J_s + J_L)/R^2)\alpha$ lbf-in

α = angular acceleration = $((RPM / 60) \times 2\pi) / t_{acc}$, rad/sec².

$J_s = \frac{\pi * L * \rho * r^4}{2 * g}$ lb - in - s² (N - m - s²)

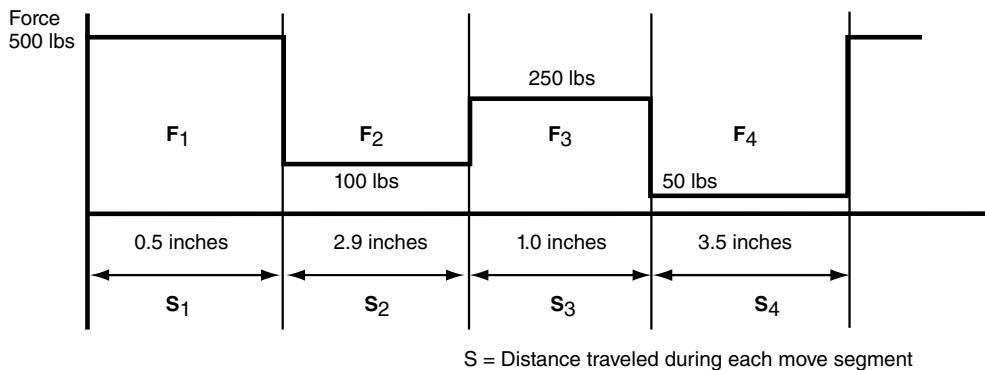

Total Torque per move segment

$\lambda_T = \lambda a + \lambda$ lbf-in (N-m)

Calculating Estimated Travel Life of Exlar Linear Actuators

Mean Load Calculations

For accurate lifetime calculations of a roller screw in a linear application, the cubic mean load should be used. Following is a graph showing the values for force and distance as well as the calculation for cubic mean load. Forces are shown for example purposes. Negative forces are shown as positive for calculation.

Cubic Mean Load Equation

$$F_{\text{cmi}} = \sqrt[3]{\frac{F_1^3 S_1 + F_2^3 S_2 + F_3^3 S_3 + F_4^3 S_4}{S_1 + S_2 + S_3 + S_4}}$$

Value from example numbers is 217 lbs.

Lifetime Calculations

The expected L₁₀ life of a roller screw is expressed as the linear travel distance that 90% of the screws are expected to meet or exceed before experiencing metal fatigue. The mathematical formula that defines this value is below. The life is in millions of inches (mm). This standard L₁₀ life calculation is what is expected of 90% of roller screws manufactured and is not a guarantee. Travel life estimate is based on a properly maintained screw that is free of contaminants and properly lubricated. Higher than 90% requires de-rating according to the following factors:

95% x 0.62	96% x 0.53
97% x 0.44	98% x 0.33
99% x 0.21	

Single (non-preloaded) nut:

$$L_{10} = \left(\frac{C_a}{F_{\text{cmi}}} \right)^3 \times \ell$$

If your application requires high force over a stroke length shorter than the length of the nut, please contact Exlar for derated life calculations. You may also download the article "Calculating Life Expectancy" at www.exlar.com.

Note: The dynamic load rating of zero backlash, preloaded screws is 63% of the dynamic load rating of the standard non-preloaded screws. The calculated travel life of a preloaded screw will be 25% of the calculated travel life of the same size and lead of a non-preloaded screw for the same application.

Total Thrust Calculations

Terms and (units)

THRUST = Total linear force-lbf (N)

F_{friction} = Force from friction-lbf (N)

F_{acc} = Acceleration force-lbf (N)

F_{gravity} = Force due to gravity-lbf (N)

F_{applied} = Applied forces-lbf (N)

386.4 = Acceleration of gravity - in/sec² (9.8 m/sec²)

Variables

θ = Angle of inclination - deg..... = _____

t_{acc} = Acceleration time - sec..... = _____

v = Change in velocity - in/sec (m/s)..... = _____

μ = Coefficient of sliding friction = _____

W_L = Weight of Load-lbm (kg)..... = _____

F_{applied} = Applied forces-lbf (N) = _____

Thrust Calculation Equations

$$\text{THRUST} = [\quad F_{\text{friction}} \quad] + [\quad F_{\text{acceleration}} \quad] + F_{\text{gravity}} + F_{\text{applied}}$$

$$\text{THRUST} = [W_L \times \mu \times \cos\theta] + [(W_L / 386.4) \times (v / t_{\text{acc}})] + W_L \sin\theta + F_{\text{applied}}$$

$$\text{THRUST} = [(\quad) \times (\quad) \times (\quad)] + [(\quad / 386.4) \times (\quad / \quad)] + [(\quad) (\quad)] + (\quad)$$

$$\begin{aligned} \text{THRUST} &= [\quad] + [(\quad) \times (\quad)] + [\quad] + [\quad] + (\quad) \\ &= \text{_____ lbf.} \end{aligned}$$

Calculate the thrust for each segment of the move profile. Use those values in calculations below. Use the units from the above definitions.

Cubic Mean Load Calculations

$$\sqrt[3]{\frac{F_1^3 S_1 + F_2^3 S_2 + F_3^3 S_3 + F_4^3 S_4}{S_1 + S_2 + S_3 + S_4}}$$

$$F_1 = \text{_____}$$

$$S_1 = \text{_____}$$

$$F_1^3 S_1 = \text{_____}$$

$$F_2 = \text{_____}$$

$$S_2 = \text{_____}$$

$$F_2^3 S_2 = \text{_____}$$

$$F_3 = \text{_____}$$

$$S_3 = \text{_____}$$

$$F_3^3 S_3 = \text{_____}$$

$$F_4 = \text{_____}$$

$$S_4 = \text{_____}$$

$$F_4^3 S_4 = \text{_____}$$

Move Profiles may have more or less than four components. Adjust your calculations accordingly.

Torque Calculations & Equations

Product Ambient Temperatures/IP Ratings

Standard Ratings for Exlar Actuators

The standard IP rating for Exlar Actuators is IP54S or IP65S. Ingress protection is divided into two categories: solids and liquids.

For example, in IP65S the three digits following “IP” represent different forms of environmental influence:

- The first digit represents protection against ingress of solid objects.
 - The second digit represents protection against ingress of liquids.
 - The suffix digit represents the state of motion during operation.

Digit 1 - Ingress of Solid Objects

The IP rating system provides for 6 levels of protection against solids.

1	Protected against solid objects over 50 mm e.g. hands, large tools.
2	Protected against solid objects over 12.5 mm e.g. hands, large tools.
3	Protected against solid objects over 2.5 mm e.g. large gauge wire, small tools.
4	Protected against solid objects over 1.0 mm e.g. small gauge wire.
5	Limited protection against dust ingress.
6	Totally protected against dust ingress.

Digit 2 - Ingress of Liquids

The IP rating system provides for 9 levels of protection against liquids.

1	Protected against vertically falling drops of water or condensation.
2	Protected against falling drops of water, if the case is positioned up to 15 degrees from vertical.
3	Protected against sprays of water from any direction, even if the case is positioned up to 60 degrees from vertical.
4	Protected against splash water from any direction.
5	Protected against low pressure water jets from any direction. Limited ingress permitted.
6	Protected against high pressure water jets from any direction. Limited ingress permitted.
7	Protected against short periods (30 minutes or less) of immersion in water of 1m or less.
8	Protected against long durations of immersion in water.
9	Protected against high-pressure, high-temperature wash-downs.

Suffix

Suffix			
S	Device standing still during operation	M	Device moving during operation

Notes

Terms and Conditions

[Return to table of contents](#)

1. OFFER AND ACCEPTANCE: These terms and conditions constitute Seller's offer to Buyer and acceptance by Buyer and any resulting sale is expressly limited to and conditioned upon Seller's terms and conditions as set forth below. If Buyer objects to any of Seller's terms and conditions, such objections must be expressly stated and brought to the attention of Seller in a written document which is separate from any purchase order or other printed form of Buyer. Such objections, or the incorporation of any additional or different terms or conditions by Buyer into a resulting order shall constitute non-acceptance of these Terms and Conditions, releasing Seller from any obligation or liability hereunder and a proposal for different terms and conditions which shall be objected to by Seller unless expressly accepted in writing by an authorized representative of Seller. Acknowledgment copy, if any, shall not constitute acceptance by Seller of any additional or different terms or conditions, nor shall Seller's commencement of effort, in itself, be construed as acceptance of an order containing additional or different terms and conditions.

2. PRICES: Published prices and discount schedules are subject to change without notice. They are prepared for the purpose of furnishing general information and are not quotations or offers to sell on the part of the company.

3. TRADE TERMS: Shipment terms are FCA, shipping point (Exlar, Chanhassen, MN). FCA (Free Carrier) per Incoterms 2010 means the Seller delivers the goods, cleared for export into the custody of the first carrier named by the buyer at the named place, above. This term is suitable for all modes of transport, including carriage by air, rail, road, and containerized/multi-modal transport. Title of the merchandise transfers from Exlar Corporation to the Buyer when it is received from Exlar by the carrier. Where allowable, Exlar will arrange the transportation via the carrier specified by the Buyer. The Buyer is responsible for all costs associated with the shipment.

4. PAYMENT TERMS: Subject to approval of Buyer's credit, the full net amount of each invoice is due and payable in cash within thirty (30) days of shipment. No payment discounts are offered, and minor inadvertent administrative errors contained in an invoice are subject to correction and shall not constitute reason for untimely payment. If, in the judgment of the Seller, the financial credit of Buyer at any time does not justify continuance of production or shipment of any product(s) on the payment terms herein specified, Seller may require full or partial payment prior to completion of production or shipment, or may terminate any order, or any part thereof, then outstanding. Custom products and blanket orders are subject to payment terms: 30% due at time of order, 70% due net 30 days from shipment.

5. MINIMUM BILLING: Minimum billing will be \$50.00.

6. DELAYS: Exlar shall not be liable for any defaults, damages or delays in fulfilling any order caused by conditions beyond Seller's control, including but not limited to acts of God, strike, lockout, boycott, or other labor troubles, war, riot, flood, government regulations, or delays from Seller's subcontractors or suppliers in furnishing materials or supplies due to one or more of the foregoing clauses.

7. CANCELLATIONS: All cancelled orders for standard products are subject to order cancellation charges. The minimum cancellation charge will be 20% of the order total. Standard products, if unused may be returned in accordance with the current return policy. All returns are subject to prior approval by Exlar, and return charges may apply. No return credit for any product will be issued or authorized prior to evaluation of the product by Exlar. Custom product is not returnable. Orders for custom product are not cancelable.

8. QUANTITY PRICING AND BLANKET ORDER PRICING TERMS: Blanket order quantity pricing requires a complete delivery schedule for the volume being ordered, with all units scheduled to deliver within a 15 month period from the placement of the purchase order to the final scheduled shipment. Any requests to change the delivery schedule of a blanket order must be received in writing 60 days prior to the requested change. Failure to take delivery of the entire ordered volume will result in back charges equal to the difference in quantity price between the volume ordered and the volume received times the number of units received. A cancellation charge in accordance with the cancellation policy (item 7) will apply to any reduction in delivered volume from the original ordered quantity.

For orders receiving quantity discounts, but not as scheduled blanket orders, the same quantity pricing rules apply. Failure to take delivery of the entire quantity ordered will result in back charges equal to the difference in quantity price between the volume ordered and the volume received times the number of units received. Cancellation charges in accordance with the cancellation policy (item 7) will apply to any reduction in delivered volume from the original ordered quantity. For either blanket orders or quantity orders, in addition to any applicable cancellation charges, the customer is responsible for the value of any additional inventory allocated specifically to their order. Charges for this inventory will be invoiced in addition to cancellation charges, along with any back charges for quantity variance.

9. DESTINATION CONTROL STATEMENT: Exlar products, technology or software are exported from the United States in accordance with the Export Administration Regulations (EAR) or International Traffic in Arms Regulations (ITAR) as applicable. Diversion, transfer, transshipment or disposal contrary to U.S. law is prohibited.

10. EXPORT CONTROL AND SHIPMENT REGULATIONS: Purchaser agrees at all times to comply with all United States laws and regulations as well as International Trade Laws, as they may exist from time to time, regarding export licenses or the control or regulation of exportation or re-exportation of products or technical data sold or supplied to Distributor. Seller may terminate or suspend this order, without remedy, should the Purchaser become an entity identified on any US export denial listing. Products ordered may require authorization and/or validated export license from a U.S. government agency. Seller may terminate or suspend this order, without remedy, should a government agency approval be denied.

11. GOVERNING LAW AND VENUE: This order shall be governed by, and construed in accordance with the laws of the State of Minnesota, U.S.A. All disputes shall be resolved by a court of competent jurisdiction in the trial courts of Carver County, in the State of Minnesota.

12. ATTORNEY FEES: Reasonable attorney's fees and other expenses of litigation must be awarded to the prevailing party in an action in which a remedy is sought under this order.

13. NON-WAIVER: The failure by the Seller to require performance of any provision shall not affect the Seller's right to require performance at any time thereafter, nor shall a waiver of any breach or default of this Order constitute a waiver of any subsequent breach or default or a waiver of the provision itself.

14. MERGER AND INTEGRATION: These Terms and Conditions contain the entire agreement of the parties with respect to the subject matter of this order, and supersede all prior negotiations, agreements and understandings with respect thereto. Purchase orders may only be amended by a written document duly executed by buyer and seller.

15. INDEMNITY: Buyer agrees to indemnify, defend and hold harmless Exlar from any claims, loss or damages arising out of or related to Seller's compliance with Buyer's designs, specifications or instructions in the furnishing of products to Buyer, whether based on infringement of patents, copyrights, trademark or other right of others, breach of warranty, negligence, or strict liability or other tort.

WARRANTY AND LIMITATION OF LIABILITY: Products are warranted for two years from date of manufacture as determined by the serial number on the product label. Labels are generated and applied to the product at the time of shipment. The first and second digits are the year and the third and fourth digits represent the manufacturing week. Product repairs are warranted for 90 days from the date of the repair. The date of repair is recorded within the Exlar database and tracked by individual product serial number.

Exlar Corporation warrants its product(s) to the original purchaser and in the case of original equipment manufacturers, to their original customer to be free from defects in material and workmanship and to be made only in accordance with Exlar standard published catalog specifications for the product(s) as published at the time of purchase. Warranty or performance to any other specifications is not covered by this warranty unless otherwise agreed to in writing by Exlar and documented as part of any and all contracts, including but not limited to purchase orders, sales orders, order confirmations, purchase contracts and purchase agreements. In no event shall Exlar be liable or have any responsibility under such warranty if the product(s) has been improperly stored, installed, used or maintained, or if Buyer has permitted any unauthorized modifications, adjustments and/or repairs to such product(s). Seller's obligation hereunder is limited solely to repairing or replacing (at its opinion), at the factory any product(s), or parts thereof, which prove to Seller's satisfaction to be defective as a result of defective materials, or workmanship and within the period of time, in accordance with the Seller's stated product warranty (see Terms and Conditions above), provided, however, that written notice of claimed defects shall have been given to Exlar within thirty (30) days from the date of any such defect is first discovered. The product(s) claimed to be defective must be returned to Exlar, transportation prepaid by Buyer, with written specification of the claimed defect. Evidence acceptable to Exlar must be furnished that the claimed defects were not caused by misuse, abuse, or neglect by anyone other than Exlar.

Components such as seals, wipers, bearings, brakes, bushings, gears, splines, and roller screw parts are considered wear parts and must be inspected and serviced on a regular basis. Any damage caused by failure to properly lubricate Exlar products and/or to replace wear parts at appropriate times, is not covered by this warranty. Any damage due to excessive loading is not covered by this warranty.

The use of products or components under load such that they reach the end of their expected life is a normal characteristic of the application of mechanical products. Reaching the end of a product's expected life does not indicate any defect in material or workmanship and is not covered by this warranty.

Costs for shipment of units returned to the factory for warranty repairs are the responsibility of the owner of the product. Exlar will return ship all warranty repairs or replacements via UPS Ground at no cost to the customer.

For international customers, Exlar will return ship warranty repairs or replacements via UPS Expedited Service and cover the associated shipping costs. Any VAT or local country taxes are the responsibility of the owner of the product.

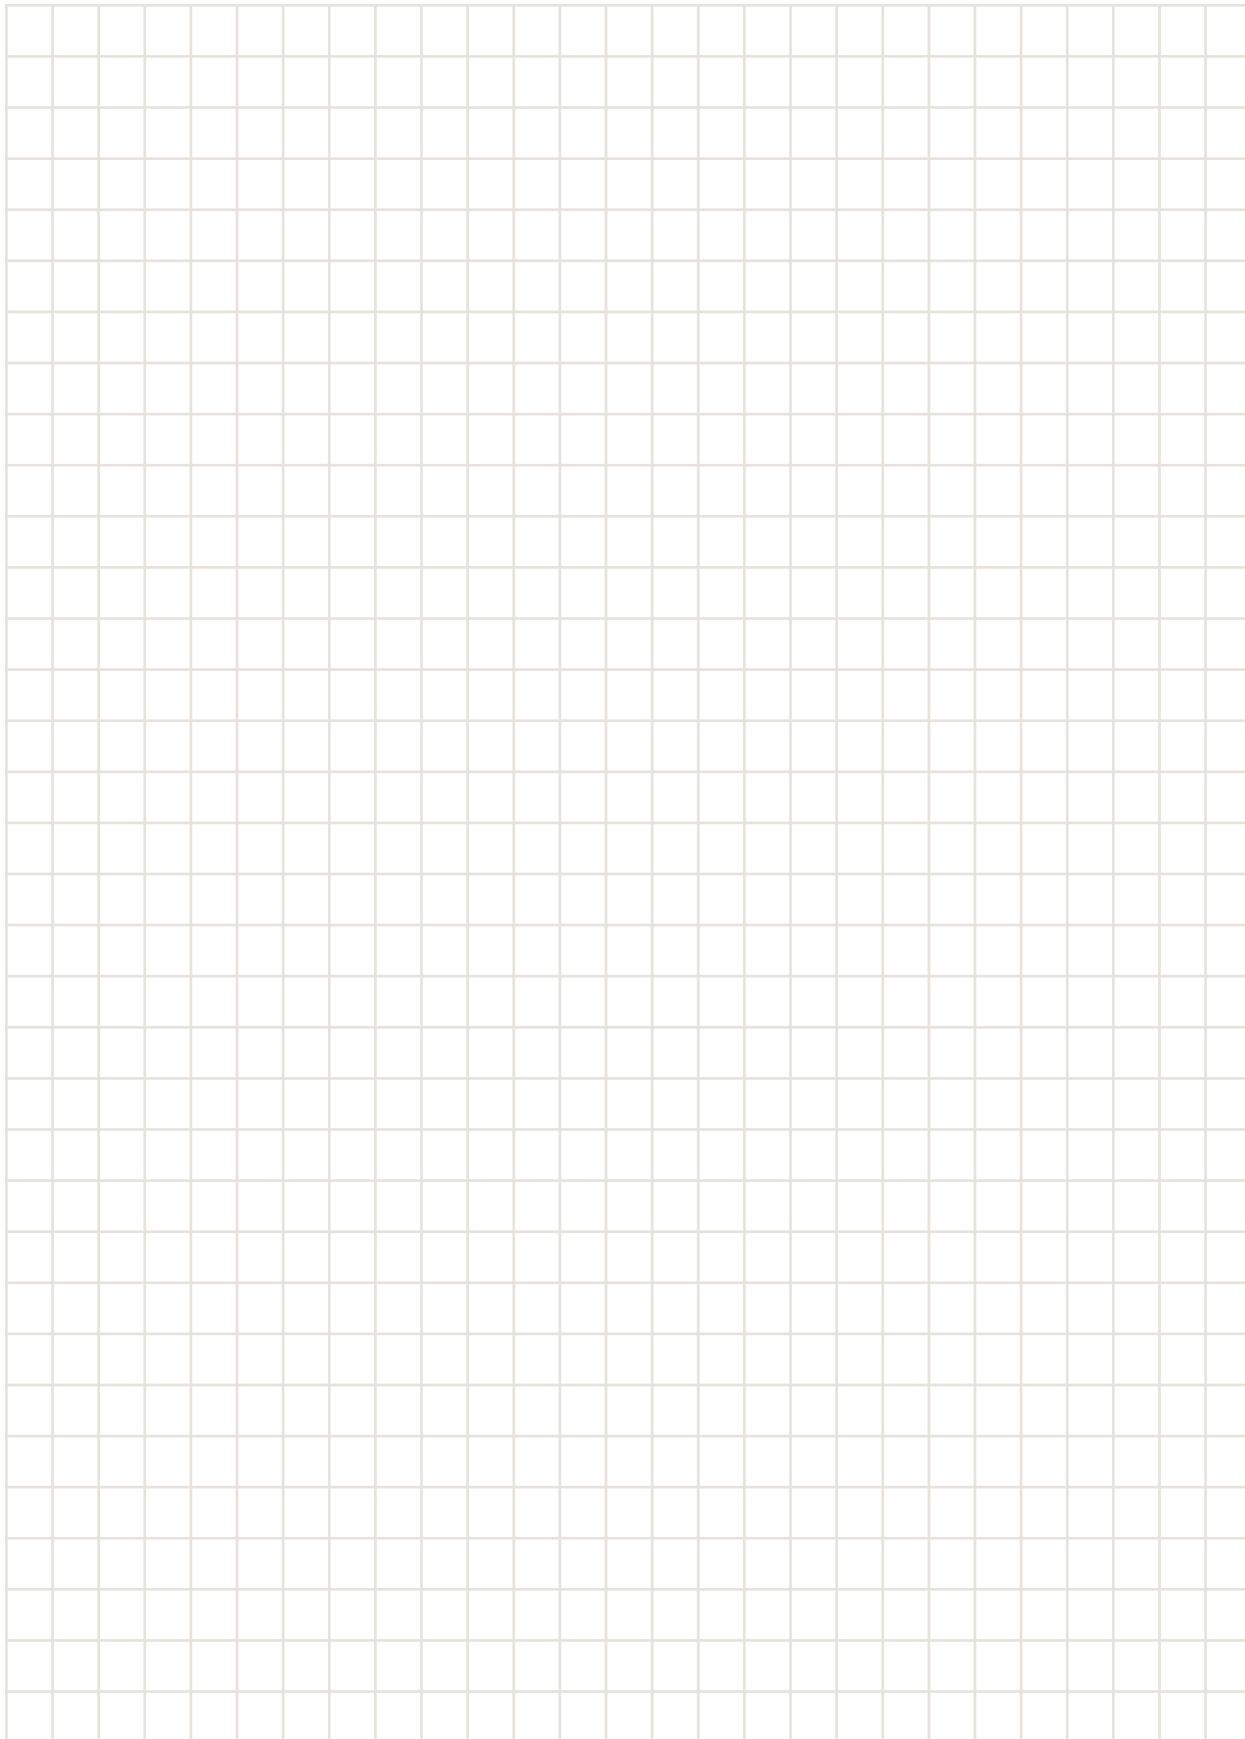

The foregoing warranty is in lieu of all other warranties (except as Title), whether expressed or implied, including without limitation, any warranty of merchantability, or of fitness for any particular purpose, other than as expressly set forth and to the extent specified herein, and is in lieu of all other obligations or liabilities on the part of Exlar.

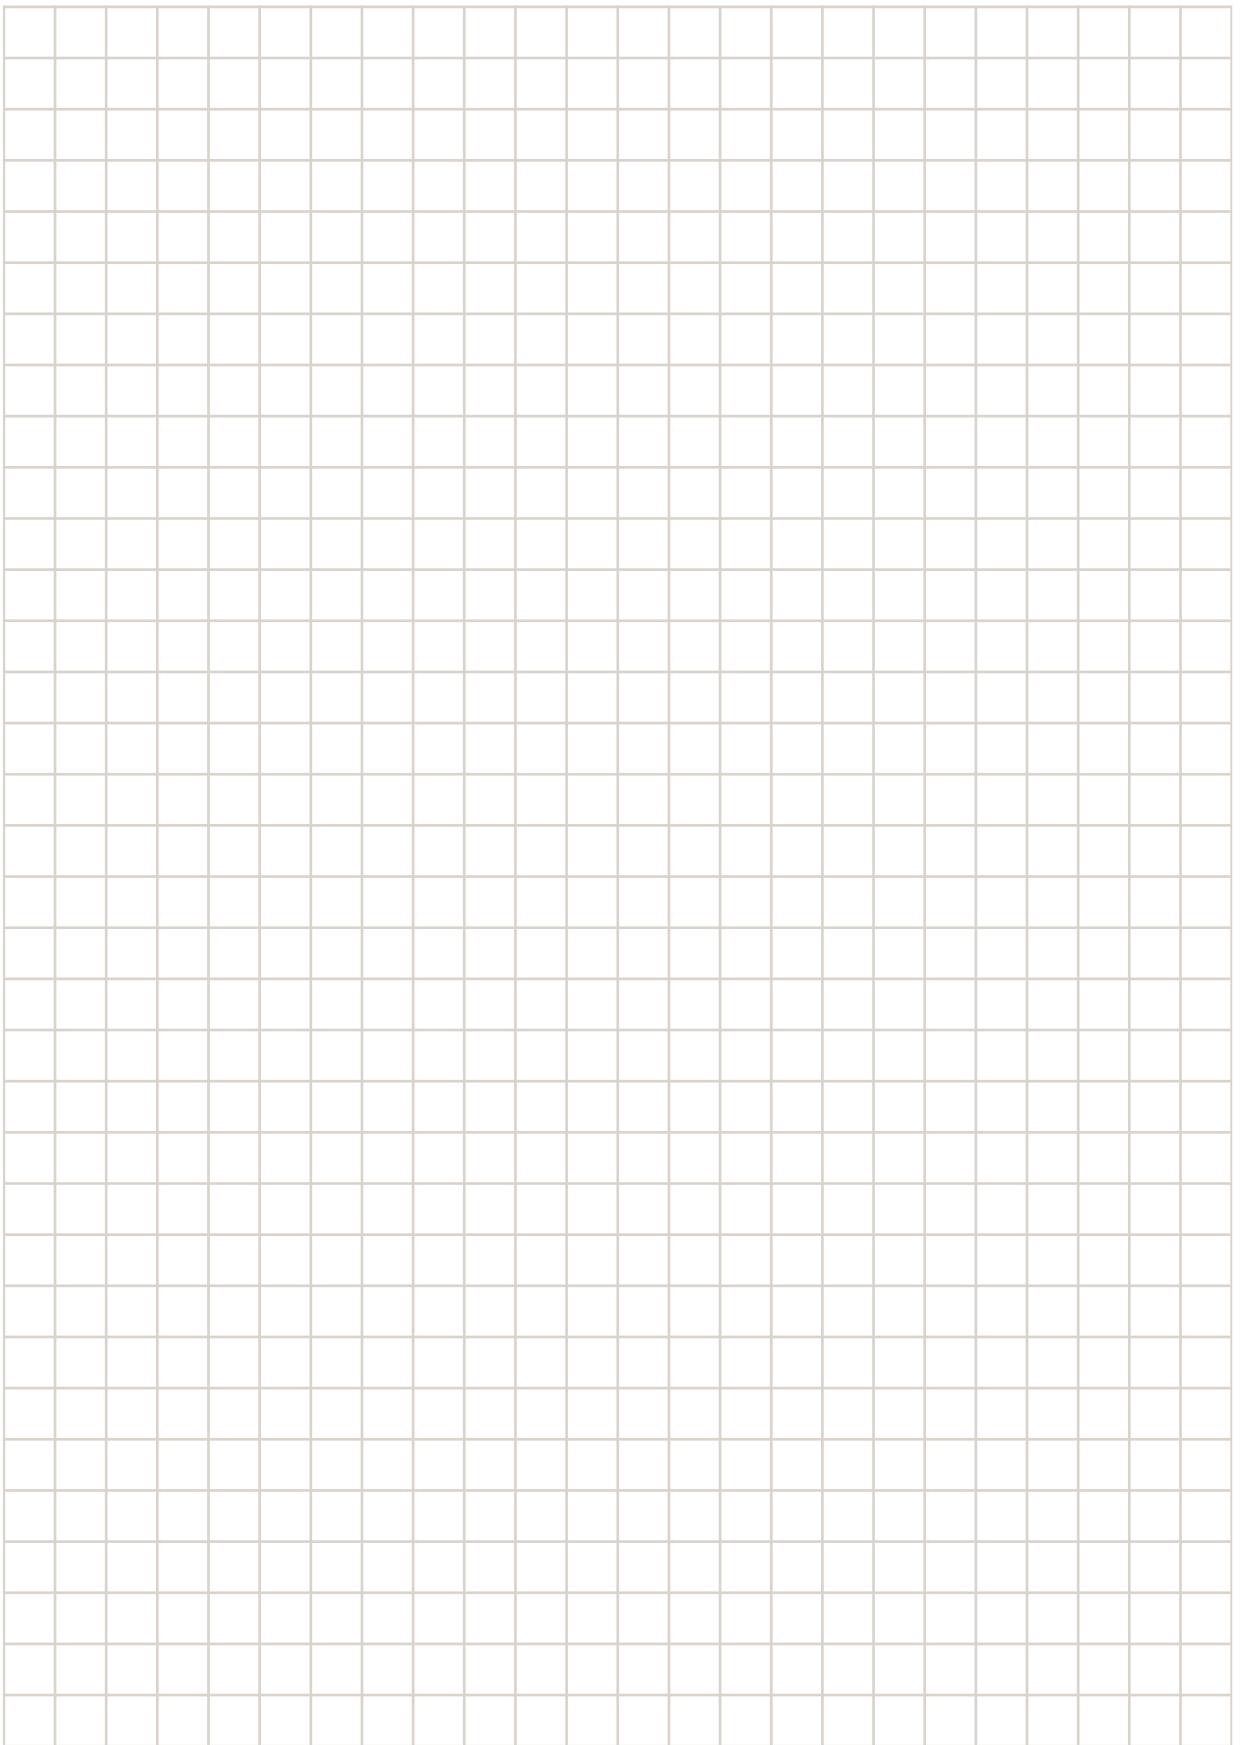

Seller's maximum liability with respect to these terms and conditions and any resulting sale, arising from any cause whatsoever, including without limitation, breach of contract or negligence, shall not exceed the price specified of the product(s) giving rise to the claim, and in no event shall Exlar be liable under this warranty otherwise for special, incidental or consequential damages, whether similar or dissimilar, of any nature arising or resulting from the purchase, installation, removal, repair, operation, use or breakdown of the product(s) or any other cause whatsoever, including negligence.

The foregoing warranty shall also apply to products or parts which have been repaired or replaced pursuant to such warranty, and within the period of time, in accordance with Seller's stated warranty.

NO PERSON INCLUDING ANY AGENT OR REPRESENTATIVE OF EXLAR CORPORATION IS AUTHORIZED TO MAKE ANY REPRESENTATION OR WARRANTY ON BEHALF OF EXLAR CONCERNING ANY PRODUCTS MANUFACTURED BY EXLAR, EXCEPT TO REFER PURCHASERS TO THIS WARRANTY.
